<b>Preface</b>	ix
<b>Chapter 1. Symplectic Manifolds</b>	1
1.1. Introduction	1
1.2. Symplectic vector spaces	2
1.3. Symplectic manifolds	3
1.4. Vectors fields and flows	7
1.5. The Darboux theorem	22
1.6. Poisson brackets and Hamiltonian systems	25
1.7. Examples	31
1.8. Coadjoint orbits and their symplectic structures	35
1.9. Application to the group $SO(n)$	37
1.9.1. Application to the group $SO(3)$	39
1.9.2. Application to the group $SO(4)$	41
1.10. Exercises	47
<b>Chapter 2. Hamilton–Jacobi Theory</b>	49
2.1. Euler–Lagrange equation	49
2.2. Legendre transformation	52
2.3. Hamilton’s canonical equations	53
2.4. Canonical transformations	55
2.5. Hamilton–Jacobi equation	57
2.6. Applications	60
2.6.1. Harmonic oscillator	60
2.6.2. The Kepler problem	61
2.6.3. Simple pendulum	62
2.7. Exercises	64

<b>Chapter 3. Integrable Systems</b>	67
3.1. Hamiltonian systems and Arnold–Liouville theorem	67
3.2. Rotation of a rigid body about a fixed point	75
3.2.1. The Euler problem of a rigid body	78
3.2.2. The Lagrange top	82
3.2.3. The Kowalewski spinning top	83
3.2.4. Special cases	90
3.3. Motion of a solid through ideal fluid	91
3.3.1. Clebsch’s case	91
3.3.2. Lyapunov–Steklov’s case	93
3.4. Yang–Mills field with gauge group $SU(2)$	93
3.5. Appendix (geodesic flow and Euler–Arnold equations)	95
3.6. Exercises	100
<b>Chapter 4. Spectral Methods for Solving Integrable Systems</b>	103
4.1. Lax equations and spectral curves	103
4.2. Integrable systems and Kac–Moody Lie algebras	104
4.3. Geodesic flow on $SO(n)$	107
4.4. The Euler problem of a rigid body	108
4.5. The Manakov geodesic flow on the group $SO(4)$	109
4.6. Jacobi geodesic flow on an ellipsoid and Neumann problem	114
4.7. The Lagrange top	115
4.8. Quartic potential, Garnier system	115
4.9. The coupled nonlinear Schrödinger equations	118
4.10. The Yang–Mills equations	119
4.11. The Kowalewski top	119
4.12. The Goryachev–Chaplygin top	121
4.13. Periodic infinite band matrix	122
4.14. Exercises	122
<b>Chapter 5. The Spectrum of Jacobi Matrices and Algebraic Curves</b>	129
5.1. Jacobi matrices and algebraic curves	129
5.2. Difference operators	135
5.3. Continued fraction, orthogonal polynomials and Abelian integrals	137
5.4. Exercises	140
<b>Chapter 6. Griffiths Linearization Flows on Jacobians</b>	143
6.1. Spectral curves	143
6.2. Cohomological deformation theory	144
6.3. Mittag–Leffler problem	148
6.4. Linearizing flows	149

---

6.5. The Toda lattice . . . . .	150
6.6. The Lagrange top . . . . .	153
6.7. Nahm's equations . . . . .	154
6.8. The $n$ -dimensional rigid body . . . . .	155
6.9. Exercises . . . . .	156
<b>Chapter 7. Algebraically Integrable Systems</b> . . . . .	159
7.1. Meromorphic solutions . . . . .	159
7.2. Algebraic complete integrability . . . . .	164
7.3. The Liouville–Arnold–Adler–van Moerbeke theorem . . . . .	171
7.4. The Euler problem of a rigid body . . . . .	173
7.5. The Kowalewski top . . . . .	175
7.6. The Hénon–Heiles system . . . . .	191
7.7. The Manakov geodesic flow on the group $SO(4)$ . . . . .	200
7.8. Geodesic flow on $SO(4)$ with a quartic invariant . . . . .	206
7.9. The geodesic flow on $SO(n)$ for a left invariant metric . . . . .	210
7.10. The periodic five-particle Kac–van Moerbeke lattice . . . . .	212
7.11. Generalized periodic Toda systems . . . . .	213
7.12. The Gross–Neveu system . . . . .	214
7.13. The Kolossof potential . . . . .	215
7.14. Exercises . . . . .	215
<b>Chapter 8. Generalized Algebraic Completely Integrable Systems</b> . . . . .	221
8.1. Generalities . . . . .	221
8.2. The RDG potential and a five-dimensional system . . . . .	225
8.3. The Hénon–Heiles problem and a five-dimensional system . . . . .	229
8.4. The Goryachev–Chaplygin top and a seven-dimensional system . . . . .	231
8.5. The Lagrange top . . . . .	236
8.6. Exercises . . . . .	237
<b>Chapter 9. The Korteweg–de Vries Equation</b> . . . . .	241
9.1. Historical aspects and introduction . . . . .	241
9.2. Stationary Schrödinger and integral Gelfand–Levitán equations . . . . .	243
9.3. The inverse scattering method . . . . .	255
9.4. Exercises . . . . .	269
<b>Chapter 10. KP–KdV Hierarchy and Pseudo-differential Operators</b> . . . . .	275
10.1. Pseudo-differential operators and symplectic structures . . . . .	275
10.2. KdV equation, Heisenberg and Virasoro algebras . . . . .	279

10.3. KP hierarchy and vertex operators . . . . .	281
10.4. Exercises . . . . .	290
<b>References</b> . . . . .	293
<b>Index</b> . . . . .	305
