<b>Chapter 1. A Thermal History of the Universe and Primordial Nucleosynthesis</b> . . . . .	1
Pierre SALATI	
1.1. A quick overview . . . . .	2
1.1.1. A useful refresher of the Friedmann–Lemaître model . . . . .	2
1.1.2. The major events of the Big Bang . . . . .	5
1.2. Gamow’s ylem . . . . .	10
1.2.1. Introductory remarks . . . . .	10
1.2.2. Numerical density . . . . .	14
1.2.3. Energy density and pressure . . . . .	16
1.2.4. Entropy density . . . . .	17
1.2.5. Effective degrees of freedom of the ylem . . . . .	19
1.2.6. Numerical developments . . . . .	20
1.3. Cooling kinetics . . . . .	22
1.3.1. Planck mass . . . . .	22
1.3.2. Relation between scale factor and temperature . . . . .	24
1.3.3. Relation between cosmic time and temperature . . . . .	25
1.4. Thermal decoupling of neutrinos . . . . .	29
1.4.1. The concept of cross-section . . . . .	29
1.4.2. Thermal equilibrium breaking . . . . .	33
1.4.3. The neutrino fossil radiation . . . . .	36
1.4.4. The Cowsik and McClelland limit . . . . .	38
1.5. Primordial nucleosynthesis . . . . .	41
1.5.1. Transmutation between protons and neutrons . . . . .	42
1.5.2. Breaking of the neutron–proton equilibrium . . . . .	46
1.5.3. The formation of deuterium . . . . .	51
1.5.4. The cooking of light elements . . . . .	54
1.6. Chemical decoupling of heavy particles . . . . .	60
1.6.1. Evolutionary equation . . . . .	62
1.6.2. Approximate solution . . . . .	63

1.6.3. Relic density . . . . .	67
1.6.4. The Lee and Weinberg limit . . . . .	69
1.7. Dissipation of the primordial fog . . . . .	71
1.7.1. Saha's equilibrium . . . . .	72
1.7.2. Photoionization and recombination of neutral hydrogen . . . . .	75
1.7.3. Lyman-alpha line and atomic resonance . . . . .	78
1.7.4. The three-level atom model . . . . .	82
1.7.5. Recombination of the primordial plasma and residual ionization . . . . .	85
1.8. References . . . . .	89
<b>Chapter 2. Cosmological Microwave Background . . . . .</b>	<b>93</b>
Julien LESGOURGUES	
2.1. Introduction . . . . .	93
2.1.1. Last scattering surface . . . . .	93
2.1.2. CMB anisotropies . . . . .	94
2.1.3. Conventions . . . . .	96
2.2. Revisiting the Thomson scattering . . . . .	96
2.2.1. Scattering rate . . . . .	96
2.2.2. Optical depth . . . . .	97
2.2.3. Visibility function . . . . .	98
2.2.4. Diffusion length . . . . .	99
2.3. Linear cosmological perturbations . . . . .	100
2.3.1. Why linear perturbations? . . . . .	100
2.3.2. Classification of perturbations . . . . .	100
2.3.3. Comoving Fourier space . . . . .	103
2.3.4. Linearized Einstein equation . . . . .	105
2.3.5. Species present in the standard cosmological model . . . . .	106
2.3.6. General equations of motion . . . . .	107
2.4. Formal description of temperature anisotropies . . . . .	108
2.4.1. Photon propagation . . . . .	108
2.4.2. Temperature anisotropy in a given direction . . . . .	113
2.5. Stochastic theory of cosmological perturbations . . . . .	117
2.5.1. Initial conditions . . . . .	118
2.5.2. Power spectrum and transfer functions . . . . .	123
2.5.3. Spectrum of temperature anisotropies . . . . .	127
2.6. Physics of temperature anisotropies . . . . .	131
2.6.1. Line-of-sight integral in Fourier space . . . . .	131
2.6.2. Perturbation evolution . . . . .	137
2.6.3. Contributions to the temperature spectrum . . . . .	142
2.6.4. Dependency on cosmological parameters . . . . .	150
2.7. Other contributions and observables . . . . .	156
2.7.1. Overview of CMB polarization . . . . .	156
2.7.2. CMB gravitational lensing . . . . .	159

2.7.3. Overview of the role of gravitational waves . . . . .	160
2.7.4. Astrophysical foreground . . . . .	161
2.7.5. Spectral distortions . . . . .	162
2.8. CBM observations . . . . .	162
2.8.1. Current observations . . . . .	162
2.8.2. Future observations . . . . .	169
2.9. References . . . . .	170

**Chapter 3. Cosmological Inflation . . . . . 173**

Sébastien RENAUX-PETEL

3.1. Overview . . . . .	173
3.2. Introduction . . . . .	175
3.2.1. Shortcomings of the Hot Big Bang model . . . . .	175
3.2.2. The mechanism of inflation . . . . .	179
3.3. Single-field slow-roll inflation . . . . .	184
3.3.1. Homogeneous dynamics . . . . .	184
3.3.2. Dynamics of fluctuations . . . . .	189
3.4. The physics of inflation beyond toy models . . . . .	215
3.4.1. Ultraviolet sensitivity . . . . .	216
3.4.2. Multifield effects . . . . .	222
3.5. Primordial non-Gaussianities . . . . .	236
3.5.1. Overview . . . . .	236
3.5.2. Determining primordial non-Gaussianities . . . . .	239
3.5.3. Non-Gaussian shapes . . . . .	243
3.6. Conclusion . . . . .	253
3.7. References . . . . .	255

**Chapter 4. Dark Matter . . . . . 259**

Richard TAILLET

4.1. Introduction . . . . .	259
4.1.1. Subject presentation . . . . .	259
4.1.2. Brief historical overview . . . . .	260
4.1.3. Current interest in the subject . . . . .	261
4.1.4. Warning . . . . .	261
4.1.5. Summary of evidence in favor of dark matter . . . . .	261
4.2. At the galaxy scale . . . . .	262
4.2.1. Introduction . . . . .	262
4.2.2. Spiral galaxy rotation curves . . . . .	263
4.2.3. Velocity dispersion in elliptical galaxies . . . . .	266
4.2.4. Application to the gravitational case . . . . .	269
4.2.5. Dwarf spheroidal galaxies . . . . .	271
4.2.6. Our Galaxy . . . . .	272
4.2.7. Density profiles . . . . .	274

4.3. At the galaxy cluster scale . . . . .	276
4.3.1. Velocity dispersion . . . . .	276
4.3.2. Hot gas X-ray . . . . .	276
4.3.3. Gravitational lenses . . . . .	277
4.3.4. The Sunyaev–Zeldovich effect . . . . .	278
4.4. Cosmology . . . . .	279
4.4.1. Geometry of the universe . . . . .	279
4.4.2. Primordial nucleosynthesis . . . . .	282
4.4.3. The formation of large structures . . . . .	282
4.5. The nature of dark matter . . . . .	291
4.5.1. Baryonic candidates . . . . .	291
4.5.2. Gravity microlensing . . . . .	294
4.5.3. Particles . . . . .	303
4.6. Detection . . . . .	315
4.6.1. Direct detection . . . . .	315
4.6.2. Indirect detection . . . . .	321
4.6.3. Clumps . . . . .	326
4.7. Modified dynamics and gravity . . . . .	329
4.7.1. MOND theory . . . . .	329
4.7.2. The <i>Bullet Cluster</i> . . . . .	330
4.8. Conclusion . . . . .	332
4.9. References . . . . .	332
<b>List of Authors . . . . .</b>	<b>335</b>
<b>Index . . . . .</b>	<b>337</b>
