<b>Introduction</b> . . . . .	xi
Gilles FLAMANT	
<b>Chapter 1. Solar Power Plants: State of the Art</b> . . . . .	1
Gilles FLAMANT	
1.1. Introduction . . . . .	1
1.2. History . . . . .	3
1.3. Various configurations of solar power plants . . . . .	7
1.4. Paradigm of solar power plants, optimum temperature – concentration factor. . . . .	10
1.5. Parabolic trough solar power plants . . . . .	14
1.6. Solar power plants with linear Fresnel concentrators. . . . .	20
1.7. Tower power plants . . . . .	23
1.8. Dish–Stirling modules. . . . .	29
1.9. Perspectives: deployment, capacity factor, costs, environmental impact and new concepts . . . . .	31
1.9.1. Commercial deployment . . . . .	31
1.9.2. Capacity factor . . . . .	33
1.9.3. Cost of electricity . . . . .	34
1.9.4. Environmental impact . . . . .	37
1.9.5. Technological evolutions and new generations (GEN3). . . . .	37
1.10. Conclusion . . . . .	40
1.11. References . . . . .	40
<b>Chapter 2. Solar Resource Management, Assessment and Forecasting</b> . . . . .	45
Stéphane THIL and Stéphane GRIEU	
2.1. Measurement and assessment of the solar resource. . . . .	45
2.1.1. Earth–Sun pair . . . . .	45

2.1.2. Extra-terrestrial solar irradiance . . . . .	50
2.1.3. Solar irradiance interaction with the atmosphere. . . . .	51
2.1.4. Components of solar irradiance and associated instruments . . . . .	57
2.2. Forecasting of direct normal irradiance . . . . .	66
2.2.1. Definitions and needs of an operator of CSP plant. . . . .	67
2.2.2. The main DNI forecasting techniques. . . . .	68
2.2.3. Intra-hour DNI forecasting models . . . . .	71
2.3. Conclusion . . . . .	77
2.4. Nomenclature . . . . .	78
2.5. References . . . . .	79
<b>Chapter 3. Optics of Concentrating Systems . . . . .</b>	<b>85</b>
François HÉNAULT, Benjamin GRANGE and Quentin FALCOZ	
3.1. Introduction . . . . .	85
3.2. History . . . . .	86
3.2.1. From Archimedes to 19th century. . . . .	86
3.2.2. 1950–1980: First industrial installations . . . . .	88
3.3. Performances and limitations. . . . .	90
3.3.1. Specification of a solar concentrator . . . . .	90
3.3.2. Collected power. . . . .	92
3.3.3. Three definitions of concentration. . . . .	93
3.3.4. Maximal concentration – Stefan’s law . . . . .	97
3.3.5. Solar concentrator-specific errors . . . . .	99
3.3.6. Concentration losses and the “golden rule” of solar concentration . . . . .	107
3.4. Optical qualification of parabolic trough concentrators . . . . .	110
3.4.1. Definitions. . . . .	110
3.4.2. Methodology . . . . .	111
3.4.3. Example . . . . .	113
3.5. The heliostat fields of tower power plants. . . . .	114
3.5.1. Description . . . . .	114
3.5.2. Optical losses . . . . .	115
3.5.4. Simulations of heliostat fields . . . . .	119
3.6. Conclusion . . . . .	121
3.7. References . . . . .	122
<b>Chapter 4. Solar Receivers . . . . .</b>	<b>125</b>
Benjamin GRANGE	
4.1. Introduction . . . . .	125
4.2. Absorber tubes for linear concentrators . . . . .	125
4.2.1. Description . . . . .	125
4.2.2. Thermal losses . . . . .	127

4.3. Solar receivers for tower power plants . . . . .	128
4.3.1. Description . . . . .	128
4.3.2. Receivers in the commercial tower power plants . . . . .	129
4.3.3. Emerging designs . . . . .	133
4.3.4. Thermal losses . . . . .	139
4.3.5. Thermal model of solar receivers . . . . .	143
4.4. Conclusion . . . . .	147
4.5. References . . . . .	148
<b>Chapter 5. Heat Transfer Fluids for Solar Power Plants . . . . .</b>	<b>151</b>
Gilles FLAMANT	
5.1. Introduction . . . . .	151
5.2. Review of thermal transfer physics. . . . .	152
5.3. Fluids, stability and properties . . . . .	154
5.3.1. Thermal stability of heat transfer fluids. . . . .	154
5.3.2. Physical properties of heat transfer fluids. . . . .	156
5.4. Fluid–wall heat transfer coefficients . . . . .	159
5.4.1. Flow conditions . . . . .	159
5.4.2. Correlations . . . . .	159
5.4.3. Heat transfer coefficients. . . . .	160
5.5. Solutions being developed . . . . .	164
5.5.1. Reduction of the melting temperature of salts . . . . .	164
5.5.2. Increase of the maximum working temperature . . . . .	165
5.6. Conclusion . . . . .	166
5.7. References . . . . .	166
<b>Chapter 6. Numerical Simulations of Flows and Heat Transfers of Solar Receivers. . . . .</b>	<b>169</b>
Françoise BATAILLE, Adrien TOUTANT and Dorian DUPUY	
6.1. Introduction . . . . .	169
6.2. Modeling approaches . . . . .	172
6.2.1. Direct numerical simulation . . . . .	173
6.2.2. Thermal large-eddy simulation . . . . .	174
6.2.3. RANS (Reynolds averaged Navier–Stokes equations) . . . . .	175
6.2.4. Correlations . . . . .	176
6.3. Direct numerical simulation and thermal large-eddy simulation . . . . .	177
6.3.1. Geometry . . . . .	177
6.3.2. Direct numerical simulation equations . . . . .	178
6.3.3. DNS results . . . . .	179
6.3.4. Equations of the thermal large-eddy simulation . . . . .	180
6.3.5. LES results . . . . .	182

---

6.4. Dynamic and thermal couplings – physical approach . . . . .	185
6.4.1. Analysis of integral quantities . . . . .	186
6.4.2. Analysis in the spatial domain . . . . .	187
6.4.3. Analysis in the spectral domain . . . . .	192
6.5. Conclusion . . . . .	196
6.6. References . . . . .	197
<b>Chapter 7. Materials for Concentrated Solar Power . . . . .</b>	<b>199</b>
Audrey SOUM-GLAUDE and Antoine GROSJEAN	
7.1. Introduction . . . . .	199
7.2. Optical properties of materials . . . . .	200
7.2.1. Spectral properties . . . . .	200
7.2.2. Solar performance . . . . .	201
7.3. Reflective components: solar mirrors . . . . .	202
7.3.1. Optical performance indicator: solar reflectance . . . . .	202
7.3.2. Materials and structures of solar mirrors . . . . .	203
7.3.3. Aging and durability of solar mirrors . . . . .	206
7.4. Transparent components: protective glass . . . . .	207
7.4.1. Optical performance indicator: solar transmittance . . . . .	207
7.4.2. Materials and structures of protective glass . . . . .	208
7.4.3. Aging and durability of antireflective glasses . . . . .	212
7.5. Absorbing components: solar absorbers . . . . .	212
7.5.1. Optical performance indicators for solar absorbers . . . . .	212
7.5.2. Materials and structures of solar absorbers . . . . .	218
7.5.3. Aging and durability of solar absorbers . . . . .	222
7.6. Conclusion . . . . .	224
7.7. References . . . . .	224
<b>Chapter 8. Thermal Energy Storage . . . . .</b>	<b>229</b>
Aubin TOUZO, Quentin FALCOZ and Gilles FLAMANT	
8.1. Introduction . . . . .	229
8.1.1. Advantages related to thermal energy storage . . . . .	229
8.1.2. An overview of thermal energy storage . . . . .	230
8.1.3. Integration of storage in the solar power plant dimensioning . . . . .	231
8.2. Two-tank molten salt storage . . . . .	232
8.2.1. Examples of existing power plants . . . . .	232
8.2.2. Operating principle . . . . .	233
8.2.3. Materials employed . . . . .	234
8.2.4. Economic advantage . . . . .	234
8.2.5. Drawbacks of molten salt storage systems . . . . .	235
8.3. Thermocline storage . . . . .	235

8.3.1. Examples of solar power plants with thermocline storage . . . . .	236
8.3.2. Operating principle . . . . .	238
8.3.3. Modeling . . . . .	239
8.3.4. Integration challenges in a solar power plant . . . . .	240
8.3.5. Storage materials . . . . .	242
8.3.6. Life cycle analysis . . . . .	245
8.3.7. Economic considerations . . . . .	245
8.4. Processes with steam accumulator . . . . .	245
8.4.1. Existing power plants . . . . .	245
8.4.2. Operating principle . . . . .	247
8.4.3. Drawbacks . . . . .	248
8.5. Solar power plant with particle receiver . . . . .	249
8.6. Research and development of latent heat processes . . . . .	250
8.6.1. PCM exchanger . . . . .	250
8.6.2. PCM encapsulation . . . . .	251
8.6.3. Principle . . . . .	251
8.6.4. Drawbacks of phase change materials . . . . .	252
8.7. Thermochemical storage . . . . .	253
8.8. Comparison of the cost of stored solar power . . . . .	253
8.9. Conclusion . . . . .	256
8.10. References . . . . .	256
<b>Chapter 9. Hybrid PV–CSP Systems . . . . .</b>	<b>259</b>
Alexis VOSSIER and Joya ZEITOUNY	
9.1. Introduction . . . . .	259
9.2. Hybrid strategies . . . . .	261
9.3. Non-compact hybrid strategies . . . . .	262
9.4. Compact hybrid strategies . . . . .	263
9.4.1. High-temperature approach . . . . .	264
9.4.2. Spectral splitting . . . . .	270
9.4.3. Performance-based comparison of the main hybrid strategies . . . . .	273
9.4.4. Hybrid PV-TS systems . . . . .	274
9.5. Innovative hybrid systems . . . . .	276
9.5.1. Mixed hybrid systems . . . . .	276
9.5.2. Luminescent solar converters . . . . .	278
9.5.3. Very high temperature thermal energy storage coupled with photovoltaic conversion . . . . .	279
9.6. Conclusion . . . . .	281
9.7. References . . . . .	281

<b>Chapter 10. Synthetic Fuels from Hydrocarbon Resources</b> . . . . .	283
Sylvain RODAT and Stéphane ABANADES	
10.1. Introduction to solar fuels . . . . .	283
10.2. Conversion of carbonaceous materials using solar energy . . . . .	285
10.2.1. Solar cracking and reforming of hydrocarbons . . . . .	285
10.2.2. Solar pyrolysis and gasification of solid carbonaceous materials . . . . .	294
10.3. Conclusion and perspectives . . . . .	299
10.4. References . . . . .	300
<b>Chapter 11. Solar Fuel Production by Thermochemical Dissociation of Water and Carbon Dioxide</b> . . . . .	303
Stéphane ABANADES and Sylvain RODAT	
11.1. Introduction . . . . .	303
11.2. Direct H <sub>2</sub> O and CO <sub>2</sub> thermolysis . . . . .	304
11.3. Thermochemical cycles . . . . .	306
11.3.1. Principle . . . . .	306
11.3.2. Cycles with volatile oxides . . . . .	308
11.3.3. Non-volatile oxide cycles . . . . .	312
11.3.4. Non-stoichiometric oxide cycles . . . . .	313
11.3.5. Solar reactor concepts for cycle implementation . . . . .	316
11.4. Conclusion . . . . .	322
11.5. References . . . . .	323
<b>List of Authors</b> . . . . .	329
<b>Index</b> . . . . .	331
