Introduction	ix
Notations	xv
Chapter 1. Semi-Normed Spaces and Function Spaces	1
1.1. Semi-normed spaces	1
1.2. Comparison of semi-normed spaces	4
1.3. Continuous mappings	6
1.4. Differentiable functions	8
1.5. Spaces $\mathcal{C}^m(\Omega; E)$, $\mathcal{C}_b^m(\Omega; E)$ and $\mathbf{C}_b^m(\Omega; E)$	11
1.6. Integral of a uniformly continuous function	14
Chapter 2. Space of Test Functions	17
2.1. Functions with compact support	17
2.2. Compactness in their whole of support of functions	19
2.3. The space $\mathcal{D}(\Omega)$	21
2.4. Sequential completeness of $\mathcal{D}(\Omega)$	24
2.5. Comparison of $\mathcal{D}(\Omega)$ to various spaces	26
2.6. Convergent sequences in $\mathcal{D}(\Omega)$	28
2.7. Covering by crown-shaped sets and partitions of unity	33
2.8. Control of the $\mathcal{C}_K^m(\Omega)$ -norms by the semi-norms of $\mathcal{D}(\Omega)$	35
2.9. Semi-norms that are continuous on all the $\mathcal{C}_K^\infty(\Omega)$	38
Chapter 3. Space of Distributions	41
3.1. The space $\mathcal{D}'(\Omega; E)$	41
3.2. Characterization of distributions	46
3.3. Inclusion of $\mathcal{C}(\Omega; E)$ into $\mathcal{D}'(\Omega; E)$	48

3.4. The case where E is not a Neumann space	53
3.5. Measures	57
3.6. Continuous functions and measures	63
Chapter 4. Extraction of Convergent Subsequences	65
4.1. Bounded subsets of $\mathcal{D}'(\Omega; E)$	65
4.2. Convergence in $\mathcal{D}'(\Omega; E)$	67
4.3. Sequential completeness of $\mathcal{D}'(\Omega; E)$	69
4.4. Sequential compactness in $\mathcal{D}'(\Omega; E)$	71
4.5. Change of the space E of values	74
4.6. The space E -weak	76
4.7. The space $\mathcal{D}'(\Omega; E$ -weak) and extractability	78
Chapter 5. Operations on Distributions	81
5.1. Distributions fields	81
5.2. Derivatives of a distribution	84
5.3. Image under a linear mapping	91
5.4. Product with a regular function	94
5.5. Change of variables	100
5.6. Some particular changes of variables	107
5.7. Positive distributions	109
5.8. Distributions with values in a product space	113
Chapter 6. Restriction, Gluing and Support	117
6.1. Restriction	117
6.2. Additivity with respect to the domain	121
6.3. Local character	122
6.4. Localization-extension	125
6.5. Gluing	128
6.6. Annihilation domain and support	130
6.7. Properties of the annihilation domain and support	133
6.8. The space $\mathcal{D}'_K(\Omega; E)$	137
Chapter 7. Weighting	141
7.1. Weighting by a regular function	141
7.2. Regularizing character of the weighting by a regular function	144
7.3. Derivatives and support of distributions weighted by a regular weight	148
7.4. Continuity of the weighting by a regular function	150
7.5. Weighting by a distribution	153
7.6. Comparison of the definitions of weighting	156
7.7. Continuity of the weighting by a distribution	159
7.8. Derivatives and support of a weighted distribution	161

7.9. Miscellaneous properties of weighting	165
Chapter 8. Regularization and Applications	169
8.1. Local regularization	169
8.2. Properties of local approximations	174
8.3. Global regularization	175
8.4. Convergence of global approximations	178
8.5. Properties of global approximations	180
8.6. Commutativity and associativity of weighting	183
8.7. Uniform convergence of sequences of distributions	188
Chapter 9. Potentials and Singular Functions	191
9.1. Surface integral over a sphere	191
9.2. Distribution associated with a singular function	193
9.3. Derivatives of a distribution associated with a singular function	196
9.4. Elementary Newtonian potential	197
9.5. Newtonian potential of order n	201
9.6. Localized potential	208
9.7. Dirac mass as derivatives of continuous functions	210
9.8. Heaviside potential	214
9.9. Weighting by a singular weight	217
Chapter 10. Line Integral of a Continuous Field	221
10.1. Line integral along a C^1 path	221
10.2. Change of variable in a path	225
10.3. Line integral along a piecewise C^1 path	228
10.4. The homotopy invariance theorem	231
10.5. Connectedness and simply connectedness	235
Chapter 11. Primitives of Functions	237
11.1. Primitive of a function field with a zero line integral	237
11.2. Tubular flows and concentration theorem	239
11.3. The orthogonality theorem for functions	243
11.4. Poincaré's theorem	244
Chapter 12. Properties of Primitives of Distributions	247
12.1. Representation by derivatives	247
12.2. Distribution whose derivatives are zero or continuous	251
12.3. Uniqueness of a primitive	253
12.4. Locally explicit primitive	254
12.5. Continuous primitive mapping	256
12.6. Harmonic distributions, distributions with a continuous Laplacian	261

Chapter 13. Existence of Primitives	265
13.1. Peripheral gluing	266
13.2. Reduction to the function case	268
13.3. The orthogonality theorem	270
13.4. Poincaré's generalized theorem	274
13.5. Current of an incompressible two dimensional field	277
13.6. Global versus local primitives	279
13.7. Comparison of the existence conditions of a primitive	282
13.8. Limits of gradients	283
Chapter 14. Distributions of Distributions	285
14.1. Characterization	285
14.2. Bounded sets	288
14.3. Convergent sequences	289
14.4. Extraction of convergent subsequences	293
14.5. Change of the space of values	294
14.6. Distributions of distributions with values in E -weak	295
Chapter 15. Separation of Variables	297
15.1. Tensor products of test functions	297
15.2. Decomposition of test functions on a product of sets	301
15.3. The tensorial control theorem	303
15.4. Separation of variables	309
15.5. The kernel theorem	311
15.6. Regrouping of variables	317
15.7. Permutation of variables	318
Chapter 16. Banach Space Valued Distributions	323
16.1. Finite order distributions	323
16.2. Weighting of a finite order distribution	326
16.3. Finite order distribution as derivatives of continuous functions	328
16.4. Finite order distribution as derivative of a single function	333
16.5. Distributions in a Banach space as derivatives of functions	335
16.6. Non-representability of distributions with values in a Fréchet space	339
16.7. Extendability of distributions with values in a Banach space	342
16.8. Cancellation of distributions with values in a Banach space	347
Appendix	349
Bibliography	367
