Introduction	ix
Chapter 1. How Can a Technological System be Understood and Analyzed?	1
1.1. Introduction.	1
1.2. The construction of technology analysis models in systems	2
1.2.1. The ontological approach of the technological system, a vision of structure	2
1.2.2. Interdependence and technological coherence: the systemic principle of dynamics of technological systems	6
1.3. The representation of the movement: the technological lifecycle, the discontinuity of the technical movement.	9
1.3.1. The technological lifecycle	9
1.3.2. The formalisms of the lifecycle: the S-curve.	10
1.3.3. The conditional stability of the S-curve: interaction between the individual lifecycle and the global technology movement	11
1.4. Model for the internal restructuring of technology systems by means of the three components: technique–architecture–function	12
1.4.1. A formalization of the technical system components: the technique–architecture–function articulation	12
1.4.2. The dynamics of interaction by the function–architecture–principle relation	14

1.4.3. Technological systems, waves of innovation and technological revolutions.	15
1.4.4. Dynamics of the technological system and social system	16
Chapter 2. The Historical Dynamics of Technological Systems: Putting the Contemporary Technological System into Historical Perspective	19
2.1. The great pre-industrial technological system	19
2.1.1. The industrial revolution of the 12th Century. The medieval wave of a permanent innovation movement	20
2.1.2. The rebound in the “Renaissance” – is there a technological and innovative specificity of the Renaissance?.	24
2.1.3. Stabilization and classical maturity	27
2.2. The English Industrial Revolution and the first industrial technological system.	28
Chapter 3. The Contemporary Technological System Emerges from the Previous One or the Third Technological Revolution	31
3.1. The second industrial technological system.	31
3.1.1. The new generic technologies at the origin of this second system	31
3.1.2. The formation of the second technological system	36
3.1.3. A technological system for one hundred years.	39
3.2. The electromechanical technological system crisis	41
3.2.1. The saturation of generic technologies and its direct manifestations	42
3.2.2. Some of the indirect and global manifestations of the technological system crisis	48
3.2.3. The technological system and organization crisis	55
Chapter 4. Formation of the Third Technological System and First Wave of the New Technological System	63
4.1. Emergence of new generic technologies.	64
4.1.1. From computing to information technologies	64

4.1.2. The hyper choice of materials	73
4.1.3. Biotechnologies	76
4.1.4. Energy: originality in diversity	81
4.2. The structuring of the new technological system.	83
4.2.1. The formation of the technological network	84
4.3. Societal and epistemological transformation	88
4.3.1. A technical and economic transformation	88
4.3.2. A scientific and epistemological transformation.	91
Chapter 5. The Second Wave of the Third Technological System	95
5.1. Maturation and bifurcation of generic technologies generating a second technological wave	96
5.1.1. Continuation of the development of information technology	96
5.1.2. The second age of materials.	97
5.1.3. Development of photonics	98
5.1.4. The rise of biology	99
5.1.5. Deepening energy diversification	101
5.1.6. A new dimension of generic technologies: nanometric properties	104
5.2. Applications re-composition and development.	105
5.2.1. A movement driven by technology convergence: the five re-composition forces of the technological system	105
5.2.2. New applications through convergence	108
5.3. The wave of new technical systems, new objects and new functionality	113
5.3.1. The system of networks and connections.	114
5.3.2. Virtual reality	116
5.3.3. Smart objects	118
5.3.4. A new world of production	121
5.3.5. Bio- and nanotechnology systems	122
5.3.6. Versatile incremental innovation.	123
5.4. Environmental pressure, a source of change in the trajectory of innovation.	124
5.4.1. Capture, storage and re-use of CO ₂	128

Chapter 6. The Second Wave of the Technology System Transforms and Reorganizes Economy and Social Systems	131
6.1. New markets, new industries, new business models	132
6.1.1. New products, re-composition of products and functions, new markets	132
6.1.2. A sectorial re-composition of economies	134
6.1.3. New consumption patterns, new marketing methods	135
6.1.4. New business models	136
6.1.5. New form of competition, new concentration	136
6.2. Disruption of the production system	137
6.2.1. The evolution of productivity	137
6.2.2. Productivity and employment.	138
6.2.3. A polarization of the distribution of income	139
6.2.4. A globalized technological system, a possible bifurcation	140
6.3. New modes of economy	141
6.3.1. Growth paradoxes	141
6.3.2. The issue of value, the GDP crisis, the renewal of the accountability of the economy	142
6.4. Interaction with social dynamics	143
6.4.1. Upheaval of the organization and in work relationships	143
6.4.2. Renewal and reorganization of R&D	144
6.4.3. The educational model crisis and new ways of training.	146
6.4.4. Governance crisis and search for new rules	147
Conclusion	151
Bibliography	157
Index	169
