Foreword	xi
Chapter 1. The State and Future of Soils	1
Christian VALENTIN	
1.1. Soils as a key component of the critical zone	1
1.1.1. Definitions	1
1.1.2. Soil functions and services	1
1.1.3. Soil and land degradation, desertification.	3
1.2. The difficult assessment of the state and kinetics of soil degradation or enhancement	3
1.2.1. Global assessment	4
1.2.2. Forms of degradation.	5
1.2.3. Main factors of soil degradation	8
1.2.4. What's the trend: degradation spiral or U-curve?	9
1.2.5. The necessity for monitoring mechanisms	12
1.3. Conservation, restoration, rehabilitation and compensation	12
1.3.1. Definitions	12
1.3.2. Implementation	13
1.3.3. Concept of neutrality in terms of land degradation	14
1.4. Conclusions.	15
1.5. References	16
Chapter 2. Soil Surface Crusting of Soil and Water Harvesting	21
Christian VALENTIN	
2.1. Surface conditions and surface crusts	21
2.2. Crust types and formation processes	23
2.2.1. Structural crusts.	23
2.2.2. Gravel crusts.	24

2.2.3. Erosion crusts	24
2.2.4. Depositional crusts	25
2.2.5. Saline crusts and efflorescence	25
2.2.6. Biological soil crusts (or Biocrusts)	26
2.3. Crusting factors and principles for improving aggregate stability	26
2.3.1. Soils.	26
2.3.2. Rain	26
2.3.3. Slope	27
2.3.4. Cover	27
2.3.5. Agricultural practices	28
2.4. Consequences of surface crusting.	29
2.4.1. Hydrological: Hortonian flow	29
2.4.2. Ecological: example of the tiger bush	30
2.4.3. Agronomic: water harvesting	32
2.5. Conclusions.	33
2.6. References	34
Chapter 3. Erosion and Principles of Soil Conservation	39
Christian VALENTIN and Jean Louis RAJOT	
3.1. Definitions	39
3.2. The importance of erosion	40
3.2.1. On a global scale	40
3.2.2. Effects of erosion	41
3.3. Processes and factors	45
3.3.1. Splash detachment	45
3.3.2. Sheet erosion (also called inter-rill erosion)	47
3.3.3. Linear erosion	52
3.3.4. Mass movements	54
3.3.5. Tillage erosion	55
3.3.6. Wind erosion	56
3.4. Erosion: a question of scale	60
3.4.1. Space scales	60
3.4.2. Time scales	61
3.4.3. Space scales	62
3.4.4. Particulate and soluble transport	63
3.4.5. Aeolian dust	63
3.5. Modeling	64
3.5.1. Statistical approaches	65
3.5.2. Physically based models.	65
3.5.3. Hybrid models.	66
3.6. Principles of soil conservation.	66
3.6.1. Field level: limiting detachment	66
3.6.2. Catchment scale: slowing runoff and promoting deposition.	69

3.7. Population density, economic contexts and public policies.	70
3.8. Conclusions.	72
3.9. References	73
Chapter 4. Soil Acidity and Acidification	83
Étienne DAMBRINE	
4.1. Acidity.	83
4.2. Definitions of acidification and its evolution	85
4.3. Illustration: long-term theoretical evolution of the acidity of a limestone loess.	87
4.4. Acidifying processes	88
4.5. Involvement of large biogeochemical cycles in soil acidification	89
4.5.1. Nitrogen cycle.	89
4.5.2. Carbon cycle.	89
4.5.3. Absorption of cations/anions by plants	89
4.5.4. Acid or alkaline deposits	90
4.5.5. Other cycles: P, S, Fe, Mn.	90
4.6. Neutralization of acidification.	90
4.7. Biogeography of acidity	91
4.8. Physical and biological consequences of soil acidity	92
4.9. References	93
Chapter 5. Soil Salinization and Management of Salty Soils	97
Jean-Pierre MONTOROI	
5.1. Introduction.	97
5.2. Natural salty environments.	97
5.2.1. Salts, dissolved particulate entities.	97
5.2.2. Typical landscapes	98
5.2.3. Continuous movement of salts	99
5.2.4. Ecosystemic services.	100
5.3. Characterization and functioning of salty soils	102
5.3.1. Diagnosis of the degree of salinization	102
5.3.2. Intrinsic physical–chemical processes.	102
5.3.3. Chemical concentration and evolution pathways of soil water	105
5.3.4. Mineralogy of saline efflorescences	107
5.4. Typology of salty soils	108
5.4.1. Soil characteristics	108
5.4.2. Vertical distribution of salinity	109
5.4.3. Spatial distribution of salinity	110
5.4.4. Classification of salty soils	110
5.4.5. Worldwide distribution of salty soils	112

5.5. Secondary soil salinization.	112
5.5.1. Anthropogenic input of salts in soils	112
5.5.2. Salinization of irrigated systems	113
5.5.3. Control of salts in irrigation.	114
5.5.4. Use of non-conventional waters	115
5.6. Agricultural development of sodic soils	116
5.6.1. Historical context	116
5.6.2. Effects of soil salt water on plants	116
5.6.3. Agronomic solutions	117
5.6.4. Macroeconomic solutions	119
5.6.5. Social and political solutions	120
5.7. Conclusions.	120
5.8. References	122

Chapter 6. Metal Pollution 127

Denis BAIZE

6.1. General information.	127
6.1.1. Definitions: trace elements	127
6.1.2. Risks and hazards: exposure and transfer routes.	129
6.1.3. Different forms and locations of trace elements in soils	132
6.1.4. Measurement and estimation methods available.	133
6.1.5. How should the pollution level of soil be assessed?	135
6.2. Famous polluted sites (France)	141
6.2.1. Metaleurop at Noyelles-Godault	142
6.2.2. Mortagne-du-Nord	144
6.2.3. Pierrelaye plain (polymetallic pollution)	145
6.3. Locally polluted sites and diffuse contamination.	147
6.3.1. Pole treatment site polluted by copper in podzol context	147
6.3.2. Soil contamination by sewage sludge	147
6.3.3. Copper contamination in vineyard soils.	153
6.3.4. Copper and zinc soil contamination from repeated spreading of pig manure	155
6.3.5. Atmospheric deposition of lead since antiquity	156
6.3.6. Metal nanoparticles	157
6.4. Impacts of metal pollution	158
6.4.1. Bio- and phytoavailability – absorption routes.	158
6.4.2. Mobility	158
6.4.3. Mobility and bioavailability estimation	159
6.4.4. The importance of soil properties for speciation, bioavailability and mobility.	159
6.5. What should be done about metal polluted soils?	160

6.5.1. Strategies without treatment	161
6.5.2. Stripping polluted horizons	161
6.5.3. In situ immobilization and phytoremediation	161
6.5.4. An example: the Maatheide-Lommel site (Belgium)	163
6.6. References	166
Chapter 7. Organic Pollution and Soil Rehabilitation	169
Corinne LEYVAL, Aurélie CÉBRON and Pierre FAURE	
7.1. Organic pollution: its origins and diversity	169
7.2. Origin and distribution of PAHs in soils.	170
7.3. Characteristics, properties and toxicity of PAHs	171
7.4. Fate and impact of organic pollution in soils: tools and approaches	173
7.4.1. Sorption of PAHs in soils	173
7.4.2. Bioavailable form and ageing of PAH contamination in soils.	175
7.4.3. Biodegradation and the microorganisms involved	176
7.5. Fate of PAHs in the plant rhizosphere	177
7.6. Remediation techniques: limitations and constraints	179
7.7. From remediation to restoration.	181
7.8. Conclusions.	182
7.9. References	183
Chapter 8. Urban Soils: Artificialization and Management.	189
Laure VIDAL-BEAUDET and Jean-Pierre ROSSIGNOL	
8.1. Introduction.	189
8.2. Soil urbanization.	190
8.2.1. History and origin of urban soils	190
8.2.2. Artificialization and sealing.	192
8.3. Soil characteristics in urban areas.	193
8.3.1. Typology of urban soils	194
8.3.2. The properties of artificialized urban soils	196
8.4. Urban soil classification and mapping	197
8.4.1. Classification	197
8.4.2. Mapping	199
8.5. Fertile soils for vegetated areas	202
8.5.1. Reconstituted soils	203
8.5.2. The particular case of aggregate structural soil	204
8.5.3. Soils built from the “waste” from cities.	205
8.6. Conclusions.	206
8.6.1. The “brown belt”	206
8.6.2. Urban soil value and protection	207
8.7. References	208

Chapter 9. Recycling Organic Waste Products in a Tropical Context	211
Frédéric FEDER	
9.1. Definition, typology and main characteristics of organic waste products	211
9.1.1. Definition of organic waste products and associated issues	211
9.1.2. Typology of organic waste products	212
9.2. Analytical characterizations of organic waste products	215
9.2.1. Chemical elements of agronomic interest (C, N, P, K)	216
9.2.2. Specific analyses of organic properties	216
9.2.3. Organic and metallic trace contaminants	217
9.3. Agricultural interests and environmental risks	218
9.3.1. Fertilizing aspects of organic waste products	218
9.3.2. Amending aspects of organic waste products	220
9.3.3. Metallic, organic and biological contaminants	223
9.3.4. Other environmental impacts	224
9.4. Examples of recycling organic waste products in tropical contexts	226
9.4.1. In weakly intensified systems	226
9.4.2. In intensive systems	227
9.5. References	231
