Introduction	vii
Chapter 1. Electrochemical Double-Layer Capacitors (EDLC)	1
1.1. The different forms of carbon	2
1.2. Increasing the capacitance of microporous carbon.	5
1.3. Activated microporous carbon	9
1.4. Hierarchical porous carbon	10
1.5. Graphene.	12
1.6. Reducing costs: carbons in aqueous media.	15
1.7. Functionalized carbon	17
1.8. Conclusion	23
Chapter 2. Electrolytes	27
2.1. High potential electrolytes	27
2.2. What about AN?	34
2.3. Conclusion	36
Chapter 3. Pseudocapacitive Materials	39
3.1. Conductive polymers	45
3.2. Metal oxides	46
3.3. Transition metal nitrides	51
3.4. Conclusion	54

Chapter 4. Hybrid and/or Asymmetric Systems	57
4.1. Hybrid devices (asymmetric) in aqueous electrolytes	59
4.1.1. Concept and limitations	60
4.1.2. Activated carbon/PbO ₂ device.	62
4.1.3. Hybrid AC/Ni(OH) ₂ device.	64
4.2. Asymmetric aqueous supercapacitors.	67
4.2.1. Activated carbon/MnO ₂ devices	67
4.2.2. Asymmetric carbon/carbon devices	70
4.2.3. Conclusions on hybrid systems in aqueous electrolytes	70
4.3. Hybrid devices in organic electrolytes	71
4.3.1. Hybrid titanate/activated carbon systems	72
4.3.2. Hybrid graphite/activated carbon systems	74
4.4. Conclusion	75
Conclusion	77
Bibliography	81
