|---|-----------|
| INTRODUCTION | ix |
| CHAPTER 1. USE OF VALUE-AT-RISK (VAR) TECHNIQUES FOR SOLVENCY II, BASEL II AND III | 1 |
| 1.1. Basic notions of VaR | 1 |
| 1.1.1. Definition | 1 |
| 1.1.2. Calculation methods | 2 |
| 1.1.3. Advantages and limits | 4 |
| 1.2. The use of VaR for insurance companies | 6 |
| 1.2.1. Regulatory approach | 7 |
| 1.2.2. Risk profile approach | 11 |
| 1.3. The use of VaR for banks | 13 |
| 1.3.1. Basel II | 14 |
| 1.3.2. Basel III | 15 |
| 1.4. Conclusion | 16 |
| CHAPTER 2. CLASSICAL VALUE-AT-RISK (VAR) METHODS | 17 |
| 2.1. Introduction | 17 |
| 2.2. Risk measures | 18 |
| 2.3. General form of the VaR | 19 |
| 2.4. VaR extensions: tail VaR and conditional VaR | 25 |
| 2.5. VaR of an asset portfolio | 28 |
| 2.5.1. VaR methodology | 29 |
| 2.6. A simulation example: the rates of investment of assets | 32 |

| | |
|--|-----------|
| CHAPTER 3. VAR EXTENSIONS FROM GAUSSIAN FINANCE TO NON-GAUSSIAN FINANCE | 35 |
| 3.1. Motivation | 35 |
| 3.2. The normal power approximation | 37 |
| 3.3. VaR computation with extreme values | 40 |
| 3.3.1. Extreme value theory | 40 |
| 3.3.2. VaR values | 46 |
| 3.3.3. Comparison of methods | 48 |
| 3.3.4. VaR values in extreme theory | 52 |
| 3.4. VaR value for a risk with Pareto distribution | 56 |
| 3.4.1. Forms of the Pareto distribution | 56 |
| 3.4.2. Explicit forms VaR and CVaR in Pareto case | 58 |
| 3.4.3. Example of computation by simulation | 61 |
| 3.5. Conclusion | 62 |
| CHAPTER 4. NEW VAR METHODS OF NON-GAUSSIAN FINANCE | 63 |
| 4.1. Lévy processes | 63 |
| 4.1.1. Motivation | 63 |
| 4.1.2. Notion of characteristic functions | 64 |
| 4.1.3. Lévy processes | 64 |
| 4.1.4. Lévy–Khintchine formula | 66 |
| 4.1.5. Examples of Lévy processes | 68 |
| 4.1.6. Variance gamma (VG) process | 71 |
| 4.1.7. Risk neutral measures for Lévy models in finance | 74 |
| 4.1.8. Particular Lévy processes: Poisson–Brownian model with jumps | 76 |
| 4.1.9. Particular Lévy processes: Merton model with jumps | 79 |
| 4.1.10. VaR techniques for Lévy processes | 83 |
| 4.2. Copula models and VaR techniques | 90 |
| 4.2.1. Introduction | 90 |
| 4.2.2. Sklar theorem (1959) | 91 |
| 4.2.3. Particular case and Fréchet bounds | 92 |
| 4.2.4. Examples of copula | 94 |
| 4.2.5. The normal copula | 99 |
| 4.2.6. Estimation of copula | 100 |
| 4.2.7. Dependence | 102 |
| 4.2.8. VaR with copula | 106 |

| | |
|--|------------|
| 4.3. VaR for insurance | 109 |
| 4.3.1. VaR and SCR | 109 |
| 4.3.2. Particular cases | 110 |
| CHAPTER 5. NON-GAUSSIAN FINANCE: SEMI-MARKOV MODELS | 115 |
| 5.1. Introduction | 115 |
| 5.2. Homogeneous semi-Markov process | 116 |
| 5.2.1. Basic definitions | 116 |
| 5.2.2. Basic properties [JAN 09] | 119 |
| 5.2.3. Particular cases of MRP | 124 |
| 5.2.4. Asymptotic behavior of SMP | 126 |
| 5.2.5. Non-homogeneous semi-Markov process | 128 |
| 5.2.6. Discrete-time homogeneous and non-homogeneous semi-Markov processes | 130 |
| 5.2.7. Semi-Markov backward processes in discrete time | 134 |
| 5.2.8. Semi-Markov backward processes in discrete time | 136 |
| 5.3. Semi-Markov option model | 139 |
| 5.3.1. General model | 139 |
| 5.3.2. Semi-Markov Black–Scholes model | 141 |
| 5.3.3. Numerical application for the semi-Markov Black–Scholes model | 141 |
| 5.4. Semi-Markov VaR models | 143 |
| 5.4.1. The environment semi-Markov VaR (ESMVaR) model | 143 |
| 5.4.2. Numerical applications for the semi-Markov VaR model | 144 |
| 5.4.3. Semi-Markov extension of the Merton’s model | 146 |
| 5.5. The Semi-Markov Monte Carlo Model in a homogeneous environment | 147 |
| 5.5.1. Capital at Risk | 147 |
| 5.5.2. A credit risk example | 148 |
| CONCLUSION | 159 |
