

Table of Contents

Preface	xi
Terms and Notation	xv
Chapter 1. Introduction	1
1.1. Statistical hypotheses	1
1.2. Examples of hypotheses in non-parametric models	2
1.2.1. Hypotheses on the probability distribution of data elements	2
1.2.2. Independence hypotheses	4
1.2.3. Randomness hypothesis	4
1.2.4. Homogeneity hypotheses	4
1.2.5. Median value hypotheses	5
1.3. Statistical tests	5
1.4. P -value	7
1.5. Continuity correction	10
1.6. Asymptotic relative efficiency	13
Chapter 2. Chi-squared Tests	17
2.1. Introduction	17
2.2. Pearson's goodness-of-fit test: simple hypothesis .	17

2.3. Pearson's goodness-of-fit test: composite hypothesis	26
2.4. Modified chi-squared test for composite hypotheses	34
2.4.1. General case	35
2.4.2. Goodness-of-fit for exponential distributions	41
2.4.3. Goodness-of-fit for location-scale and shape-scale families	43
2.5. Chi-squared test for independence	52
2.6. Chi-squared test for homogeneity	57
2.7. Bibliographic notes	64
2.8. Exercises	64
2.9. Answers	72
Chapter 3. Goodness-of-fit Tests Based on Empirical Processes	77
3.1. Test statistics based on the empirical process	77
3.2. Kolmogorov–Smirnov test	82
3.3. ω^2 , Cramér–von-Mises and Andersen–Darling tests	86
3.4. Modifications of Kolmogorov–Smirnov, Cramér–von-Mises and Andersen–Darling tests: composite hypotheses	91
3.5. Two-sample tests	98
3.5.1. Two-sample Kolmogorov–Smirnov tests	98
3.5.2. Two-sample Cramér–von-Mises test	103
3.6. Bibliographic notes	104
3.7. Exercises	106
3.8. Answers	109
Chapter 4. Rank Tests	111
4.1. Introduction	111
4.2. Ranks and their properties	112
4.3. Rank tests for independence	117
4.3.1. Spearman's independence test	117

4.3.2. Kendall's independence test	124
4.3.3. ARE of Kendall's independence test with respect to Pearson's independence test under normal distribution	133
4.3.4. Normal scores independence test	137
4.4. Randomness tests	139
4.4.1. Kendall's and Spearman's randomness tests	140
4.4.2. Bartels–Von Neuman randomness test . . .	143
4.5. Rank homogeneity tests for two independent samples	146
4.5.1. Wilcoxon (Mann–Whitney–Wilcoxon) rank sum test.	146
4.5.2. Power of the Wilcoxon rank sum test against location alternatives	153
4.5.3. ARE of the Wilcoxon rank sum test with respect to the asymptotic Student's test . .	155
4.5.4. Van der Warden's test	161
4.5.5. Rank homogeneity tests for two independent samples under a scale alternative	163
4.6. Hypothesis on median value: the Wilcoxon signed ranks test	168
4.6.1. Wilcoxon's signed ranks tests	168
4.6.2. ARE of the Wilcoxon signed ranks test with respect to Student's test	177
4.7. Wilcoxon's signed ranks test for homogeneity of two related samples	180
4.8. Test for homogeneity of several independent samples: Kruskal–Wallis test	181
4.9. Homogeneity hypotheses for k related samples: Friedman test	191
4.10. Independence test based on Kendall's concordance coefficient	204
4.11. Bibliographic notes	208
4.12. Exercises	209
4.13. Answers	212

Chapter 5. Other Non-parametric Tests	215
5.1. Sign test	215
5.1.1. Introduction: parametric sign test	215
5.1.2. Hypothesis on the nullity of the medians of the differences of random vector components	218
5.1.3. Hypothesis on the median value	220
5.2. Runs test	221
5.2.1. Runs test for randomness of a sequence of two opposite events	223
5.2.2. Runs test for randomness of a sample	226
5.2.3. Wald–Wolfowitz test for homogeneity of two independent samples	228
5.3. McNemar’s test	231
5.4. Cochran test	238
5.5. Special goodness-of-fit tests	245
5.5.1. Normal distribution	245
5.5.2. Exponential distribution	253
5.5.3. Weibull distribution	260
5.5.4. Poisson distribution	262
5.6. Bibliographic notes	268
5.7. Exercises	269
5.8. Answers	271
APPENDICES	275
Appendix A. Parametric Maximum Likelihood Estimators: Complete Samples	277
Appendix B. Notions from the Theory of Stochastic Processes	281
B.1. Stochastic process	281
B.2. Examples of stochastic processes	282
B.2.1. Empirical process	282
B.2.2. Gauss process	283
B.2.3. Wiener process (Brownian motion)	283
B.2.4. Brownian bridge	284
B.3. Weak convergence of stochastic processes	285

B.4. Weak invariance of empirical processes	286
B.5. Properties of Brownian motion and Brownian bridge	287
Bibliography	293
Index	305
