Preface	vii
Introduction	ix
Chapter 1. A Necessary Transition?	1
1.1. Socio-technical systems facing their limits	2
1.1.1. Meeting global demographic pressures	3
1.1.2. Limiting the depletion of natural resources.	4
1.1.3. Restrain environmental degradation	5
1.2. An analytical framework under construction: the Transition Studies	7
1.2.1. The emergence of “Transition Studies”	7
1.2.2. The transition as a process of socio-technical systems transformation	8
1.2.3. A transition supported by a systemic vision of innovation	11
1.3. Eco-innovations: facilitators of the transition?	19
1.3.1. Innovation for the environment.	19
1.3.2. New management and innovation practices	22
Chapter 2. Energy Transitions	27
2.1. A socially structuring energy model	29
2.2. Fundamentals and characterization of the current energy system	31
2.2.1. Energy and the energy system	31
2.2.2. From primary energy to final energy	32
2.3. The limits of the current energy system	34
2.3.1. An evolution of the world’s energy consumption...	35

2.3.2. ...which shrinks fossil energy reserves...	36
2.3.3. ...and generates local and global environmental damage.	38
2.4. Innovation in the energy transition	40
2.4.1. Improving the current system of energy production and adapting existing technologies to new constraints	41
2.4.2. Producing energy differently from non-carbon resources	43
2.4.3. Using energy differently: electromobility.	47
2.4.4. Transition to a radically new energy system: the hydrogen economy	50
2.5. Barriers of the energy transition.	55
2.5.1. Market failures	55
2.5.2. Systemic failures	56
Chapter 3. Agro-ecological Transitions	59
3.1. The notion of agro-ecology	60
3.1.1. Towards an ecologically intensive agriculture...	60
3.1.2. ... and a sustainable food regime.	61
3.2. The implementation of the agro-ecological transition	61
3.2.1. Changing agricultural production systems	62
3.2.2. Eco-innovations in agribusiness companies: a recent and moderate development	63
3.2.3. Consumers committed to the environment	65
3.3. Obstacles and levers for the agro-ecological transition	69
3.3.1. Process of locking and unlocking	69
3.3.2. Obstacles to the development of new agricultural practices	71
3.3.3. Blockages on the side of the agri-food sector	77
3.4. The levers for agro-ecological transition: the role of public policies	79
Conclusion	87
Bibliography	91
Index	115
