

Table of Contents

Introduction	ix
Chapter 1. Numerical Analysis Methods for Passive Circuits	1
Pierre SAGUET	
1.1. Introduction	1
1.2. Method of moments	2
1.2.1. General method	2
1.2.2. Choice of basis and test functions	4
1.2.3. Application example	6
1.2.4. Conclusion	7
1.3. Finite element method	8
1.3.1. Integral form of partial differential equations	8
1.3.2. Discretization of integral forms using the Galerkin method	10
1.3.3. Sub-domain decomposition	12
1.3.4. Elementary matrix form	12
1.3.5. Discretization	13
1.3.6. Assembly of elementary matrices and system resolution	16
1.3.7. Application example	17
1.3.8. Conclusion	21
1.4. Finite difference time domain (FDTD) method	21
1.4.1. Discretization principle	22
1.4.2. The Yee scheme	24
1.4.3. Boundary conditions	31
1.4.4. Numerical dispersion	33
1.4.5. Numerical stability	34
1.5. Conclusion	34
1.6. Bibliography	35

Chapter 2. Calculation Procedures of Passive Components with the TLM Method: Application to Coplanar Filters and Antennas . . .	39
Michel NEY, Sandrick LE MAGUER and Gaétan PRIGENT	
2.1. Introduction	39
2.2. Basic algorithm	41
2.3. Boundary conditions	45
2.4. Absorbing boundary conditions (ABC)	46
2.5. Excitation	48
2.6. Calculation of scattering parameters	49
2.7. Adapted procedures	56
2.7.1. Calculation of far fields	56
2.7.2. Body with revolution symmetry	59
2.8. Conclusion	63
2.9. Bibliography	64
Chapter 3. Multi-scale Circuits: Use of Auxiliary Sources	67
Henri BAUDRAND and Sidina WANE	
3.1. Introduction	67
3.2. Different source types in planar circuits	69
3.2.1. Primary sources	70
3.2.2. Auxiliary sources	76
3.2.3. Virtual sources	85
3.3. Use of auxiliary sources in planar circuits	87
3.3.1. Modeling of a localized impedance in a microstrip circuit	89
3.3.2. Equivalent lumped elements	91
3.4. Conclusion	96
3.5. Appendices	97
3.5.1. Calculation of an impedance in microstrip line	97
3.6. Bibliography	105
Chapter 4. Packages for RF Circuits	109
Jean CHILO	
4.1. Introduction	109
4.2. Distributed model and localized model	113
4.2.1. Distributed model	113
4.2.2. Localized model	115
4.3. Proposed concept	117
4.3.1. Method principle	118
4.3.2. Equivalent electrical cell	118
4.3.3. Electric model	119

4.4. Modeling example	121
4.4.1. Extraction of RLCG parameters within the meaning of Maxwell	122
4.4.2. Determination of the electric model within the meaning of Kirchhoff	125
4.5. Experimental validation	127
4.6. Performance comparison of several plastic packages	131
4.6.1. Insertion of plastic packages	131
4.6.2. Isolation of plastic packages	134
4.7. Conclusion	137
4.8. Bibliography	138
Chapter 5. Characterization of Devices and Passive RF Integrated Circuits	139
Jean-Louis CARBONERO	
5.1. Introduction	139
5.1.1. Measurement methods in RF applicable to passive devices	139
5.2. Frequency/time measurement methods	140
5.2.1. Measurement methods in the time domain	141
5.2.2. Measurement methods in frequency domain	147
5.3. Measurement of S parameters	161
5.3.1. Characterization tool of S parameters	161
5.3.2. Types of measurement errors in the network analyzer	163
5.3.3. Models used for error correction	164
5.4. Characterization of passive components (inductances, resistors, capacitances, lines, etc.)	187
5.4.1. Inductances	188
5.4.2. Capacitances	196
5.4.3. Resistors	199
5.4.4. Devices used for interconnections	201
5.5. Bibliography	207
Chapter 6. Measurement in the Time Domain	215
Fabien NDAGIJIMANA	
6.1. Introduction: time-frequency relationships	215
6.1.1. Several definitions	216
6.1.2. Speed and propagation delay	217
6.1.3. Dispersive propagation	218
6.1.4. Rise time	218

6.2. Localized and distributed circuits	219
6.2.1. Reflection and transmission of voltage	221
6.2.2. Measurement of characteristic impedances with a pulse generator	224
6.2.3. Measurement of impedances with a unit step	226
6.2.4. Case of cascade impedances	227
6.2.5. Observable voltages	228
6.2.6. Effects of multiple reflections in broadband circuits	231
6.2.7. Reflection on reactive loads	232
6.2.8. Localization and characterization of defects	233
6.3. Extraction of the equivalent circuit	236
6.3.1. Case of an inductive discontinuity	237
6.3.2. Case of a capacitive discontinuity	239
6.3.3. Case of a series inductance and a parallel capacitance.	241
6.3.4. Cascade discontinuities – spatial resolution	243
6.3.5. Case of inductive connectors	245
6.3.6. Case of capacitive connectors	246
6.4. Measurement of crosstalk in interconnections	247
6.4.1. Crosstalk by localized coupling	247
6.4.2. Cross talk by distributed coupling	249
6.4.3. Measurement of SWR by reflectometry.	255
6.4.4. Measurement of S parameters by the time domain method.	256
6.5. Bibliography	259
List of Authors	261
Index	263
