

Table of Contents

Preface	xi
Chapter 1. Hydrometallurgical Extraction Processes	1
1.1. Overview of hydrometallurgical processes	1
1.2. Leaching processes	2
1.2.1. Basic features	2
1.2.2. Leaching of oxides with acid-base reactions	5
1.2.3. Leaching of sulfides	12
1.2.4. Leaching of metals	37
1.3. Precipitation processes	39
1.3.1. Precipitation of hydroxides and oxides	40
1.3.2. Precipitation of sulfides	48
1.3.3. Production of Cu, Ni and Co metallic powders from salt solutions by reduction with hydrogen	49
1.3.4. Cementation	52
1.4. Solvent extraction	55
1.4.1. Extractants	55
1.4.2. Extraction and stripping isotherms and extractant selectivity	57
1.4.3. Solvent extraction operations in copper hydrometallurgic treatments	60
1.4.4. Cobalt-nickel separation from various leach liquors by solvent extraction	61
1.4.5. Iron extraction from a sulfuric Fe-Zn solution	62
1.4.6. Extraction of gold from hydrochloric solutions	62
1.4.7. Extraction of gallium from Bayer process leach solutions	62
1.5. Hydrometallurgical processing routes of ores, concentrates and residue (flowsheets)	62

1.5.1. The Bayer process: bauxite processing	63
1.5.2. Hydrometallurgical processing routes of zinc ores and electric arc furnace dusts	67
1.5.3. Hydrometallurgical processing routes of copper ores and mattes	73
1.5.4. Processing of nickel laterites, sulfide concentrates and mattes	75
1.6. Bibliography	81
Chapter 2. Electrometallurgical Extraction Processes	87
2.1. Overview of electrometallurgical processes	87
2.2. Electrolysis – bases	88
2.2.1. The electrolytic cell	88
2.2.2. Faraday’s law	89
2.2.3. The electromotive force (EMF)	90
2.2.4. Electrical energy consumption	92
2.2.5. Decomposition potential of a salt	92
2.2.6. Electrorefining	94
2.2.7. Configurations of industrial cells and cell lines	95
2.3. Aqueous electrolysis: bases	98
2.3.1. Electrolytic water decomposition	98
2.3.2. Aqueous salt electrolysis	99
2.3.3. Metal deposit and hydrogen production	101
2.3.4. Electrodeposition of metals – deposit morphologies	102
2.4. Electrowinning of copper	103
2.4.1. Copper chloride electrolysis	103
2.4.2. Copper sulfate electrolysis	104
2.4.3. Electrolytic copper and blister copper electrorefining	106
2.4.4. Electrorefining of copper matte	107
2.5. Electrowinning of nickel	108
2.5.1. Nickel chloride electrolysis	108
2.5.2. Electrorefining of nickel	108
2.5.3. Electrorefining of nickel matte	109
2.6. Electrowinning of zinc	111
2.6.1. Zinc sulfate electrolysis	111
2.6.2. Ammonium chloride zinc electrolysis	113
2.6.3. Sodium zincate electrolysis	114
2.7. Electrorefining of lead	114
2.8. Electrorefining of tin	115
2.9. Cobalt electrowinning	115
2.10. Bibliography	115

Chapter 3. Halide Extraction Processes	117
3.1. Overview of the halide extraction processes	117
3.2. Chlorination processes	118
3.2.1. Thermodynamic data	119
3.2.2. Mechanisms and kinetics	124
3.2.3. Carbochlorination of ores	130
3.3. Reduction of halides	132
3.3.1. Hydrogen reduction	132
3.3.2. Metallothermic reduction	133
3.4. Bibliography	137
Chapter 4. Reduction of Metal Oxides	139
4.1. Introduction	139
4.1.1. Overview of the oxide reduction processes	139
4.1.2. Thermodynamics: basic considerations	140
4.1.3. Mechanisms and kinetics: basic considerations	145
4.2. Solid state oxide reduction by a gaseous reducing agent	148
4.2.1. Industrial operations	148
4.2.2. Thermodynamics	149
4.2.3. Mechanism and kinetics	160
4.2.4. Reduction of iron oxides	161
4.2.5. Reducibility of iron ores	163
4.2.6. Reduction of chromite	165
4.2.7. Reduction of manganese oxides	166
4.2.8. Reduction of ilmenite	166
4.2.9. Reduction of tungsten and molybdenum oxides	166
4.3. Solid-state carbothermic reduction	168
4.3.1. Industrial operations	168
4.3.2. Mechanisms	169
4.3.3. Direct reduction: thermodynamics and kinetics	171
4.3.4. Reduction of chromium oxide and chromite	174
4.3.5. Reduction of manganese oxide and manganese ore	176
4.3.6. Indirect reduction: thermodynamics and kinetics	177
4.3.7. Reduction of the iron oxides	180
4.3.8. Reduction of zinc ferrite	181
4.3.9. Carburizing reduction by methane-containing gas	182
4.4. Carbothermic smelting reduction	183
4.4.1. Industrial operations	183
4.4.2. Thermodynamics	183
4.4.3. Mechanisms	184
4.4.4. Reduction of iron oxide	187
4.4.5. Reduction of chromium oxide	189

4.4.6. Reduction of manganese oxide	192
4.4.7. Reduction of manganese ore	193
4.4.8. Production of silicomanganese alloy	194
4.5. Smelting reduction by slag-metal reactions	195
4.5.1. Reaction systems	195
4.5.2. Thermodynamics and kinetics	195
4.5.3. Reduction of iron oxides in reaction system II	197
4.5.4. Reduction of iron oxides in reaction system III	198
4.5.5. Reduction of chromium oxide	200
4.5.6. Reduction of silica	201
4.5.7. Silicomanganese production	203
4.6. Carbothermic reduction of silica and alumina	203
4.6.1. Conversion of silica into silicon carbide	203
4.6.2. Reduction of silica into silicon	205
4.6.3. Reduction of alumina	208
4.7. Metallothermic reductions	212
4.7.1. Silicothermic ferroalloys production	212
4.7.2. Silicothermic reduction of magnesia MgO	213
4.7.3. Calcothermic reduction of titanium oxide	215
4.7.4. Aluminothermic reduction	216
4.8. Bibliography	216
Chapter 5. Oxygen Steelmaking	221
5.1. Overview of steel converting and refining operations	221
5.2. Converting and refining reactions	222
5.2.1. Oxidation of hot metal elements by gaseous oxygen	222
5.2.2. Metal-slag reactions	223
5.3. Oxidation of hot metal elements by gaseous oxygen	226
5.3.1. Basic considerations	226
5.3.2. Gaseous oxidation of pure iron	228
5.3.3. Oxidation of a Fe-C alloy	229
5.3.4. Oxidation of Fe-C-Si alloys	230
5.3.5. Oxidation processes in hot metal converting industrial operations	231
5.4. “Slag-metal” reactions	232
5.4.1. Overview	232
5.4.2. Oxidation kinetics of the hot metal elements	232
5.4.3. Hot metal desiliconizing and manganese metal-slag partition	234
5.4.4. Decarburization	235
5.4.5. Dephosphorization	237
5.4.6. Thermodynamic modeling of a hot metal-converting operation	243

Table of Contents ix

5.5. Stainless steel making	245
5.6. Ultra-low carbon steel making	249
5.7. Bibliography	252
Chapter 6. Sulfide Extraction Processes	255
6.1. Introduction	255
6.1.1. Overview of industrial operations	255
6.1.2. Thermodynamic considerations	256
6.2. Oxidation of sulfides (in the solid state)	258
6.2.1. Thermodynamics	258
6.2.2. Mechanism and kinetics	265
6.3. Matte oxidation by gaseous oxygen	269
6.3.1. Copper matte	269
6.3.2. Iron matte	272
6.3.3. Fe-Cu-S matte	274
6.4. Reactions occurring in smelting and converting operations	274
6.4.1. Mechanisms	274
6.4.2. FeS matte/magnetite reactions	275
6.4.3. (Fe-Cu-S)-matte/copper oxide and matte-slag reactions	276
6.4.4. (Fe-Ni-S)-matte/nickel oxide and matte-slag reactions	279
6.4.5. Typical data on Fe-Cu-S and Fe-Ni-S converting matte compositions	279
6.4.6. Thermodynamic modeling of primary converting of a matte	282
6.5. Smelting reduction of a roasted concentrate and primary converting	284
6.6. Secondary converting of Cu ₂ S, Ni ₃ S ₂ and PbS mattes	285
6.6.1. Copper matte	286
6.6.2. Nickel matte	289
6.6.3. Lead matte	291
6.7. Bibliography	291
Chapter 7. Metal Refining Processes	295
7.1. Introduction	295
7.2. Steel refining/secondary steelmaking	296
7.2.1. Introduction	296
7.2.2. Secondary steelmaking stations	296
7.2.3. Steel deoxidation and inclusion control	298
7.2.4. Desulfurization of hot metal and steel	300
7.2.5. Dehydrogenation and denitrogenization	307
7.3. Aluminum refining	310
7.3.1. Primary aluminum refining	310
7.3.2. Recycled aluminum refining	312

7.4. Copper refining	313
7.5. Lead refining	315
7.5.1. Decoppering	315
7.5.2. Removal of arsenic, antimony and tin	317
7.5.3. Removal of bismuth	317
7.5.4. Removal of silver (Parkes process)	317
7.6. Tin refining	318
7.7. Zinc refining	318
7.8. Titanium and zirconium refining	319
7.9. Nickel refining	319
7.9.1. Carbonylation (transport reaction)	320
7.9.2. Separation by distillation of carbonyl compounds	321
7.9.3. Precipitation of nickel	321
7.10. Bibliography	321
List of Symbols	325
Index	337
Summary of Other Volumes	349
