Preface	xi
Part 1. Smoothness of the Survival Probabilities with Applications	1
Chapter 1. Classical Results on the Ruin Probabilities	3
1.1. Classical risk model	3
1.1.1. Description of the model	3
1.1.2. Net profit condition and the behavior of the infinite-horizon ruin probability	5
1.1.3. Integro-differential equations for the survival probabilities	6
1.1.4. Integral equation for the infinite-horizon ruin probability	8
1.1.5. Laplace transform of the infinite-horizon survival probability	10
1.1.6. Analytic expressions for the infinite-horizon survival probability	11
1.1.7. Cramér–Lundberg approximation for the infinite-horizon ruin probability	13
1.1.8. Lundberg inequality for the infinite-horizon ruin probability	16
1.1.9. Bibliographical notes	18
1.2. Risk model with stochastic premiums	22

1.2.1. Description of the model	22
1.2.2. Basic results	23
1.2.3. Bibliographical notes	25
Chapter 2. Classical Risk Model with Investments in a Risk-Free Asset	27
2.1. Description of the model	27
2.2. Continuity and differentiability of the infinite-horizon survival probability	28
2.3. Continuity of the finite-horizon survival probability and existence of its partial derivatives	32
2.3.1. Main theorem	32
2.3.2. Examples	40
2.4. Bibliographical notes	47
Chapter 3. Risk Model with Stochastic Premiums and Investments in a Risk-Free Asset	49
3.1. Description of the model	49
3.2. Continuity and differentiability of the infinite-horizon survival probability	50
3.2.1. Main results	50
3.2.2. Zero interest rate	56
3.3. Continuity of the finite-horizon survival probability and existence of its partial derivatives	59
Chapter 4. Classical Risk Model with a Franchise and a Liability Limit	65
4.1. Introduction	65
4.2. Survival probability in the classical risk model with a franchise	68
4.2.1. Analytic expression for the survival probability	68
4.2.2. Case of small and large enough initial surpluses	80
4.3. Survival probability in the classical risk model with a liability limit	84
4.3.1. Analytic expression for the survival probability	85

4.3.2. Case of small enough and large enough initial surpluses	91
4.4. Survival probability in the classical risk model with both a franchise and a liability limit	93
4.4.1. Analytic expression for the survival probability	94
4.4.2. Case of small initial surpluses	102

**Chapter 5. Optimal Control by the Franchise and
Deductible Amounts in the Classical Risk Model**

Chapter 5. Optimal Control by the Franchise and Deductible Amounts in the Classical Risk Model	105
5.1. Introduction	105
5.2. Optimal control by the franchise amount	106
5.2.1. Problem statement	106
5.2.2. Hamilton–Jacobi–Bellman equation	108
5.2.3. Existence theorem	110
5.2.4. Verification theorem	113
5.2.5. Exponentially distributed claim sizes	116
5.3. Optimal control by the deductible amount	119
5.3.1. Problem statement	119
5.3.2. Hamilton–Jacobi–Bellman equation	121
5.3.3. Existence and verification theorems	122
5.3.4. Exponentially distributed claim sizes	123
5.4. Bibliographical notes	124

**Chapter 6. Risk Models with Investments
in Risk-Free and Risky Assets**

Chapter 6. Risk Models with Investments in Risk-Free and Risky Assets	127
6.1. Description of the models	127
6.2. Classical risk model with investments in risk-free and risky assets	129
6.2.1. Upper and lower bounds for the infinite-horizon survival probability	129
6.2.2. Continuity and differentiability of the infinite-horizon survival probability	136
6.2.3. Continuity of the finite-horizon survival probability and existence of its partial derivatives	140
6.3. Risk model with stochastic premiums and investments in risk-free and risky assets	147

6.4. Accuracy and reliability of uniform approximations of the survival probabilities by their statistical estimates	150
6.4.1. Finite-horizon survival probability	150
6.4.2. Infinite-horizon survival probability	157
6.5. Bibliographical notes	159
Part 2. Supermartingale Approach to the Estimation of Ruin Probabilities	163
Chapter 7. Risk Model with Variable Premium Intensity and Investments in One Risky Asset	165
7.1. Description of the model	165
7.2. Auxiliary results	167
7.2.1. Sufficient conditions for the solution to explode	167
7.2.2. Finiteness of the first exit time	172
7.3. Existence and uniqueness theorem	175
7.4. Supermartingale property for the exponential process	176
7.5. Upper exponential bound for the ruin probability	181
7.6. Bibliographical notes	184
Chapter 8. Risk Model with Variable Premium Intensity and Investments in One Risky Asset up to the Stopping Time of Investment Activity	187
8.1. Description of the model	187
8.2. Existence and uniqueness theorem	189
8.3. Redefinition of the ruin time	190
8.4. Supermartingale property for the exponential process	192
8.5. Upper exponential bound for the ruin probability	196
8.6. Exponentially distributed claim sizes	199
8.7. Modification of the model	200

Chapter 9. Risk Model with Variable Premium Intensity and Investments in One Risk-Free and a Few Risky Assets	205
9.1. Description of the model	205
9.2. Existence and uniqueness theorem	209
9.3. Supermartingale property for the exponential process	209
9.4. Upper exponential bound for the ruin probability	214
9.5. Case of one risky asset	223
9.6. Examples	224
Appendix	231
Bibliography	239
Abbreviations and Notation	255
Index	259
