Foreword	11
Acronyms	17
Chapter 1. UWB Technology and its Applications	21
1.1. Introduction	21
1.2. Definition and historical evolution	22
1.2.1. Definition	22
1.2.2. Historical evolution	23
1.3. Specificities of UWB	24
1.4. Considered applications	26
1.5. Regulation evolution	30
1.5.1. Regulation in the USA	31
1.5.2. Regulation in Europe	32
1.5.3. Regulation in Asia	33
1.6. UWB communication system and standardization	34
1.6.1. Impulse radio	35
1.6.1.1. Pulse position modulation	35
1.6.1.2. Pulse amplitude modulation	38
1.6.2. Direct sequence UWB	39
1.6.3. Multiband OFDM	40
1.7. Conclusion	41
Chapter 2. Radio Wave Propagation	43
2.1. Introduction	43
2.2. Definition of the propagation channel	43
2.2.1. Free space propagation	44
2.2.2. Multipath propagation	45
2.2.3. Propagation channel variations	47

6 Ultra-Wideband Radio Propagation Channels

2.2.3.1. Spatial selectivity	48
2.2.3.2. Frequency selectivity	48
2.2.3.3. Doppler effect	50
2.3. Propagation channel representation	51
2.3.1. Mathematical formulation	51
2.3.2. Characterization of deterministic channels	52
2.3.2.1. The time varying impulse response	53
2.3.2.2. The frequency domain function	53
2.3.2.3. The time varying transfer function	54
2.3.2.4. The delay-Doppler spread function	54
2.3.3. Characterization of linear random channels	54
2.3.4. Channel classification	55
2.3.4.1. Wide sense stationary channels	55
2.3.4.2. Uncorrelated scattering channels	56
2.3.4.3. Wide sense stationary uncorrelated scattering channels	57
2.4. Channel characteristic parameters	58
2.4.1. Frequency selectivity	58
2.4.1.1. RMS delay spread	59
2.4.1.2. Coherence bandwidth	59
2.4.1.3. Delay window and delay interval	60
2.4.1.4. Exponential decay constants	61
2.4.1.5. Cluster and ray arrival rates	61
2.4.2. Propagation loss	62
2.4.3. Fast fading	63
2.4.4. Spectral analysis	64
2.5. Conclusion	64
Chapter 3. UWB Propagation Channel Sounding	67
3.1. Introduction	67
3.2. Specificity of UWB channel sounding	67
3.3. Measurement techniques for UWB channel sounding	70
3.3.1. Frequency domain techniques	71
3.3.1.1. Vector network analyzer	71
3.3.1.2. Chirp sounder	72
3.3.2. Time domain techniques	73
3.3.2.1. Pulsed techniques	73
3.3.2.2. Correlation measurements	75
3.3.2.3. Inversion techniques	78
3.3.3. Multiple-band time domain sounder for dynamic channels .	78
3.3.3.1. Principle of multiple-band time domain sounding . . .	80
3.3.3.2. Description of the SIMO channel sounder	81
3.3.3.3. Extension towards UWB	81
3.3.3.4. Experimental validation	84

3.4. UWB measurement campaigns	85
3.4.1. Overview of UWB measurement campaigns	85
3.4.2. Illustration of channel sounding experiments	91
3.4.2.1. Static measurement campaign over the 3.1–10.6 GHz band	91
3.4.2.2. Static measurement campaign over the 2–6 GHz band	95
3.4.2.3. Dynamic measurement campaign over the 4–5 GHz band	95
3.5. Conclusion	98
Chapter 4. Deterministic Modeling of the UWB Channel	99
4.1. Introduction	99
4.2. Overview of deterministic modeling	99
4.2.1. FDTD based approach	100
4.2.2. MoM based approach	100
4.2.3. Ray based approach	101
4.3. Specificity of deterministic modeling in UWB	101
4.4. Overview of UWB deterministic modeling	102
4.4.1. Qiu model	102
4.4.2. Yao model	102
4.4.3. Attiya model	103
4.4.4. Uguen and Tchoffo Talom model	104
4.5. Illustration of a deterministic model formalism	104
4.5.1. Received signal synthesis	105
4.5.2. Ray impulse response without delay	105
4.5.3. Ray channel matrix without delay	108
4.5.4. Described model results	110
4.5.4.1. Emitted waveform and considered scenario	110
4.5.4.2. Channel matrix of each emitted waveform in the LOS case	113
4.5.4.3. Received signal with ideal antennas	114
4.6. Consideration of real antenna characteristics in deterministic modeling	118
4.7. Building material effects on channel properties	120
4.8. Simulation and measurement comparisons	124
4.8.1. Evaluation of real antenna consideration	124
4.8.2. Evaluation of impulse response reconstruction	125
4.9. Conclusion	126
Chapter 5. Statistical Modeling of the UWB Channel	133
5.1. Experimental characterization of channel parameters	134
5.1.1. Propagation loss	134
5.1.1.1. Frequency propagation loss	134

8 Ultra-Wideband Radio Propagation Channels

5.1.1.2. Distance propagation loss	136
5.1.2. Impulse response characterization	137
5.1.2.1. Delay spread	137
5.1.2.2. Power delay profile decay	141
5.1.2.3. Ray and cluster arrival rate	145
5.1.3. Study of small-scale channel variations	148
5.1.4. Effect of moving people	151
5.1.4.1. Observation of temporal variations	151
5.1.4.2. Slow fading	152
5.1.4.3. Fast fading	153
5.1.4.4. Spectral analysis	156
5.2. Statistical channel modeling	157
5.2.1. Examples of statistical models	158
5.2.1.1. IEEE 802.15.3a model	158
5.2.1.2. IEEE 802.15.4a model	159
5.2.1.3. Other models	160
5.2.2. Empirical modeling principles	162
5.2.2.1. Propagation loss model	162
5.2.2.2. Modeling the channel impulse response over an infinite bandwidth	163
5.2.2.3. Modeling the channel impulse response over a limited bandwidth	166
5.2.2.4. Simulation results	166
5.3. Advanced modeling in a dynamic configuration	169
5.3.1. Space variation modeling	169
5.3.2. Modeling the effect of people	172
5.4. Conclusion	175

Appendices

A. Baseband Representation of the Radio Channel	177
B. Statistical Distributions	181
B.1. Definition	181
B.1.1. Rayleigh distribution	181
B.1.2. Rice distribution	182
B.1.3. Nakagami distribution	183
B.1.4. Weibull distribution	184
B.1.5. Normal distribution	184
B.1.6. Log-normal distribution	185
B.1.7. Laplace distribution	185
B.2. Kolmogorov-Smirnov goodness-of-fit test	186
C. Geometric Optics and Uniform Theory of Diffraction	189
C.1. Geometric optics	189
C.1.1. Introduction	189

C.1.2. Field locality principle	190
C.1.3. Field expression in geometric optics	191
C.1.4. Change of local basis	192
C.1.5. Incident field	192
C.1.6. Reflected field	193
C.1.7. Refracted and transmitted field	197
C.2. Uniform theory of diffraction	200
C.2.1. Introduction	200
C.2.2. Diffracted field	200
C.2.3. UTD 2D coefficient	201
C.2.4. UTD 3D coefficient	204
D. Ray Construction Techniques	209
D.1. Ray launching	209
D.2. Ray tracing	209
D.3. Other techniques	211
E. Description of the Time-Frequency Transform	213
Bibliography	219
Index	237
