Contents

Preface ix

Introduction xiii

Chapter 1. Wireless Sensor Networks 1

1.1. WSN definition, models and applications 1
1.1.1. Sensor nodes 1
1.1.2. Sensor coverage models 3
1.1.3. Sensor communication models 6
1.1.4. Wireless sensor networks 9
1.1.5. WSN models and architectures 10
1.1.6. WSN applications 11
1.2. WSN deployment strategies 13
1.3. WSN deployment: objectives and constraints 14
1.3.1. Coverage 14
1.3.2. *k*-coverage 15
1.3.3. Preferential coverage 15
1.3.4. Deployment cost 16
1.3.5. Network connectivity 17
1.3.6. Network lifetime 17
1.3.7. Energy efficiency 18
1.3.8. Data fidelity 18
1.3.9. Fault tolerance and load balancing 18
1.4. Conclusion 19

Chapter 2. Random Deployment 21

2.1. Why random deployment? 21
2.2. Random deployment strategies 22
2.2.1. Simple random node placement strategies 22
2.2.2. Compound random node placement strategies 25
2.3. Discussion 29
2.3.1. Theoretical studies 30
2.3.2. Simulation studies 31
2.4. Practical issues that need further research 31
2.4.1. Finite WSNs 32
2.4.2. Realistic sensor coverage and communication models 32
2.4.3. Practical sensor package for random deployment 32
2.4.4. Random deployment of three-dimensional WSNs 33
2.5. Conclusion 34

Chapter 3. Deterministic Deployment 35

3.1. Why deterministic deployment? 35
3.2. Formalization of the deterministic deployment problem 36
3.3. Placement algorithms 38
3.3.1. Binary deployment strategies 39
3.3.2. Probabilistic deployment strategies 42
3.3.3. Evidential deployment strategies 45
3.4. A simple methodology for deterministic deployment of WSNs 48
3.5. Application: deploying a surveillance WSN 52
3.5.1. Hardware and software 52
3.5.2. System architecture 52
3.5.3. Experiments and results 53
3.6. Practical issues that need further research 56
3.6.1. Handling perturbations 57
3.6.2. Deterministic deployment of three-dimensional WSNs . . . 58
3.6.3. Refocusing on application demands 58
3.7. Conclusion 59

Chapter 4. Fusion-based Deterministic Deployment 61

4.1. Why fusion-based deterministic deployment? 61
4.2. Fusion-based detection coverage models 62

4.2.1. Fusion-based probabilistic models 62
4.2.2. Fusion-based evidential models 64
4.3. Fusion-based deterministic deployment problems 68
4.3.1. The (α,β)-coverage 68
4.3.2. Network model and assumptions 69
4.3.3. Problem 1: handling (α, β)-coverage and cost 69
4.3.4. Problem 2: handling (α, β)-coverage, cost and connectivity 71
4.4. Sensor placement algorithms 73
4.4.1. Fusion-based probabilistic strategies 73
4.4.2. Fusion-based evidential strategies 74
4.5. Application: deploying a fusion-based surveillance WSN 82
4.5.1. Building belief functions 82
4.5.2. Analyzing (α, β)-coverage 83
4.6. Practical issues that need further research 85
4.6.1. Energy efficiency 85
4.6.2. Fusion-based heterogeneous WSN deployment 85
4.6.3. Spatiotemporal coverage in fusion-based WSNs 86
4.7. Conclusion 87

Chapter 5. Dynamic Deployment 89

5.1. Why dynamic deployment? 89
5.2. Movement-assisted sensor deployment algorithms 90
5.2.1. Virtual force based approach 93
5.2.2. Computational geometry based approach 95
5.2.3. Fuzzy based approach 98
5.2.4. Metaheuristic based approach 101
5.2.5. Coverage pattern based approach 102
5.2.6. Grid quorum based approach 104
5.2.7. Bio-inspired approach 105
5.2.8. Miscellaneous approaches 108
5.3. Sensor relocation algorithms 111
5.3.1. Sensor relocation for hole healing 112
5.3.2. Sensor relocation for connectivity restoration 113
5.3.3. Sensor relocation for network resource optimization 114
5.3.4. Sensor relocation for fault tolerance purposes 114
5.4. Practical issues that need further research 115
5.4.1. Security vulnerabilities 115

5.4.2. WSN self-deployment and self-healing in three-dimensional RoI 115
5.4.3. Path planning 116
5.4.4. Application-specific WSN self-deployment and self-healing 117
5.5. Conclusion 117

Conclusion 119
