<b>Preface</b>	xii
<b>Notations and Symbols</b>	xv
<b>Part 1. Ionic Equilibria</b>	1
<b>Chapter 1. Dissociation of Electrolytes in Solution</b>	3
1.1. Strong electrolytes – weak electrolytes	3
1.1.1. Dissolution	3
1.1.2. Solvolysis	4
1.1.3. Melting	4
1.2. Mean concentration and mean activity coefficient of ions	5
1.3. Dissociation coefficient of a weak electrolyte	6
1.4. Conduction of electrical current by electrolytes	9
1.4.1. Transport numbers and electrical conductivity of an electrolyte	9
1.4.2. Equivalent conductivity and limiting equivalent conductivity of an electrolyte	10
1.4.3. Ionic mobility	11
1.4.4. Relation between equivalent conductivity and mobility – Kohlrausch's law	14
1.4.5. Apparent dissociation coefficient and equivalent conductivity	16
1.4.6. Variations of equivalent conductivities with the concentrations	16
1.5. Determination of the dissociation coefficient	20

1.5.1. Determination of the dissociation coefficient by the cryometric method . . . . .	21
1.5.2. Determination of the dissociation coefficient on the basis of the conductivity values . . . . .	22
1.6. Determination of the number of ions produced by dissociation . . . . .	23
1.6.1. Use of limiting molar conductivity . . . . .	23
1.6.2. Use of cryometry . . . . .	24
1.7. Thermodynamic values relative to the ions . . . . .	27
1.7.1. The standard molar Gibbs energy of formation of an ion . . . . .	27
1.7.2. Standard enthalpy of formation of ions . . . . .	29
1.7.3. Absolute standard molar entropy of an ion . . . . .	29
1.7.4. Determination of the mean activity of a weak electrolyte on the basis of the dissociation equilibrium . . . . .	30
<b>Chapter 2. Solvents and Solvation . . . . .</b>	31
2.1. Solvents . . . . .	31
2.2. Solvation and structure of the solvated ion . . . . .	33
2.3. Thermodynamics of solvation . . . . .	35
2.3.1. Thermodynamic values of solvation . . . . .	36
2.3.2. Gibbs energy of salvation – Born’s model . . . . .	37
2.4. Transfer of a solute from one solvent to another . . . . .	44
2.5. Mean transfer activity coefficient of solvation of an electrolyte . . . . .	48
2.6. Experimentally determining the transfer activity coefficient of solvation . . . . .	49
2.6.1. Determining the activity coefficient of a molecular solute . . . . .	50
2.6.2. Determination of the mean transfer activity coefficient of a strong electrolyte . . . . .	51
2.6.3. Evaluation of the individual transfer activity coefficient of an ion . . . . .	51
2.7. Relation between the constants of the same equilibrium achieved in two different solvents . . . . .	55
2.7.1. General relation of solvent change on an equilibrium constant . . . . .	55
2.7.2. Influence of the dielectric constant of the solvent on the equilibrium constant of an ionic reaction . . . . .	56
<b>Chapter 3. Acid/Base Equilibria . . . . .</b>	61
3.1. Definition of acids and bases and acid–base reactions . . . . .	62
3.2. Ion product of an amphiprotic solvent . . . . .	63
3.3. Relative strengths of acids and bases . . . . .	64
3.3.1. Definition of the acidity constant of an acid . . . . .	64
3.3.2. Protic activity in a solvent . . . . .	67

---

3.4. Direction of acid–base reactions, and domain of predominance . . . . .	69
3.5. Leveling effect of a solvent . . . . .	71
3.6. Modeling of the strength of an acid. . . . .	75
3.6.1. Model of the strength of an acid . . . . .	75
3.6.2. Comparison of an acid’s behavior in two solvents . . . . .	78
3.6.3. Construction of activity zones for solvents . . . . .	81
3.7. Acidity functions and acidity scales . . . . .	84
3.8. Applications of the acidity function . . . . .	88
3.8.1. Measuring the pKa of an indicator. . . . .	89
3.8.2. Measuring the ion products of solvents . . . . .	89
3.9. Acidity in non-protic molecular solvents . . . . .	91
3.10. Protolysis in ionic solvents (molten salts) . . . . .	92
3.11. Other ionic exchanges in solution . . . . .	93
3.11.1. Ionoscopy. . . . .	93
3.11.2. Acidity in molten salts: definition given by Lux and Flood . . . . .	94
3.12. Franklin and Gutmann’s solvo-acidity and solvo-basicity. . . . .	96
3.12.1. Definition of solvo-acidity . . . . .	96
3.12.2. Solvo-acidity in molecular solvents . . . . .	96
3.12.3. Solvo-acidity in molten salts . . . . .	98
3.13. Acidity as understood by Lewis . . . . .	100
<b>Chapter 4. Complexations and Redox Equilibria</b> . . . . .	101
4.1. Complexation reactions. . . . .	101
4.1.1. Stability of complexes . . . . .	101
4.1.2. Competition between two ligands on the same acceptor . . . . .	106
4.1.3. Method for studying perfect complexes . . . . .	108
4.1.4. Methods for studying imperfect complexes . . . . .	110
4.1.5. Study of successive complexes . . . . .	115
4.2. Redox reactions . . . . .	117
4.2.1. Electronegativity – electronegativity scale . . . . .	117
4.2.2. Degrees of oxidation . . . . .	124
4.2.3. Definition of redox reactions . . . . .	128
4.2.4. The two families of redox reactions . . . . .	128
4.2.5. Dismutation and antidismutation . . . . .	130
4.2.6. Redox reactions, and calculation of the stoichiometric numbers . . . . .	131
4.2.7. Concept of a redox couple. . . . .	132
<b>Chapter 5. Precipitation Reactions and Equilibria</b> . . . . .	135
5.1. Solubility of electrolytes in water – solubility product . . . . .	135
5.2. Influence of complex formation on the solubility of a salt . . . . .	136

5.3. Application of the solubility product in determining the stability constant of complex ions . . . . .	137
5.4. Solution with multiple electrolytes at equilibrium with pure solid phases . . . . .	138
5.4.1. Influence of a salt with non-common ions on the solubility of a salt . . . . .	139
5.4.2. Influence of a salt with a common ion on the solubility of a salt . . . . .	141
5.4.3. Crystallization phase diagram for a mixture of two salts in solution. . . . .	141
5.4.4. Formation of double salts or chemical combinations in the solid state . . . . .	142
5.4.5. Reciprocal quaternary systems – square diagrams . . . . .	144
5.5. Electrolytic aqueous solution and solid solution . . . . .	147
5.5.1. Thermodynamic equilibrium between a liquid ionic solution and a solid solution . . . . .	147
5.5.2. Solubility product of a solid solution . . . . .	150
5.6. Solubility and pH . . . . .	155
5.6.1. Solubility and pH . . . . .	155
5.6.2. Solubility of oxides in molten alkali hydroxides . . . . .	156
5.6.3. Solubility in oxo-acids and oxo-bases (see section 3.12.2) . . . . .	157
5.7. Calculation of equilibria in ionic solutions . . . . .	158
<b>Part 2. Electrochemical Thermodynamics . . . . .</b>	163
<b>Chapter 6. Thermodynamics of the Electrode . . . . .</b>	165
6.1. Electrochemical systems . . . . .	165
6.1.1. The electrochemical system. . . . .	166
6.1.2. Electrochemical functions of state . . . . .	167
6.1.3. Electrochemical potential . . . . .	167
6.1.4. Gibbs–Duhem relation for electrochemical systems . . . . .	169
6.1.5. Chemical system associated with an electrochemical system . . . . .	170
6.1.6. General conditions of an equilibrium of an electrochemical system . . . . .	171
6.2. The electrode . . . . .	173
6.2.1. Definition and reaction of the electrode . . . . .	173
6.2.2. Equilibrium of an insulated metal electrode – electrode absolute voltage . . . . .	174
6.2.3. Voltage relative to a metal electrode – Nernst’s relation . . . . .	175
6.2.4. Chemical and electrochemical Gibbs energy of the electrode reaction . . . . .	178

---

6.2.5. Influence of pH on the electrode voltage . . . . .	179
6.2.6. Influence of the solvent and of the dissolved species on the electrode voltage . . . . .	181
6.2.7. Influence of temperature on the normal potentials . . . . .	183
6.3. The different types of electrodes . . . . .	184
6.3.1. Redox electrodes . . . . .	184
6.3.2. Metal electrodes. . . . .	189
6.3.3. Gas electrodes . . . . .	192
6.4. Equilibrium of two ionic conductors in contact. . . . .	193
6.4.1. Junction potential with a semi-permeable membrane. . . . .	193
6.4.2. Junction potential of two electrolytes with a permeable membrane . . . . .	194
6.5. Applications of Nernst's relation to the study of various reactions . . . . .	196
6.5.1. Prediction of redox reactions . . . . .	196
6.5.2. Relations between the redox voltages of different systems of the same element . . . . .	197
6.5.3. Predicting the dismutation and anti-dismutation reactions . . . . .	201
6.5.4. Redox catalysis . . . . .	202
6.6. Redox potential in a non-aqueous solvent . . . . .	203
6.6.1. Scale of redox potential in a non-aqueous medium . . . . .	203
6.6.2. Oxidation and reduction of the solvent . . . . .	206
6.6.3. Influence of solvent on redox systems in a non-aqueous solvent . . . . .	207
<b>Chapter 7. Thermodynamics of Electrochemical Cells . . . . .</b>	<b>209</b>
7.1. Electrochemical chains – batteries and electrolyzer cells . . . . .	209
7.2. Electrical voltage of an electrochemical cell . . . . .	210
7.3. Cell reaction . . . . .	212
7.4. Influence of temperature on the cell voltage; Gibbs–Helmholtz formula . . . . .	213
7.5. Influence of activity on the cell voltage . . . . .	214
7.6. Dissymmetry of cells, chemical cells and concentration cells . . . . .	215
7.7. Applications to the thermodynamics of electrochemical cells . . . . .	216
7.7.1. Determining the standard potentials of cells . . . . .	216
7.7.2. Determination of the dissociation constant of a weak electrolyte on the basis of the potential of a cell . . . . .	218
7.7.3. Measuring the activity of a component in a strong electrolyte . . . . .	221
7.7.4. Influence of complex formation on the redox potential . . . . .	224
7.7.5. Electrochemical methods for studying complexes . . . . .	226
7.7.6. Determining the ion product of a solvent . . . . .	234

7.7.7. Determining a solubility product. . . . .	235
7.7.8. Determining the enthalpies, entropies and Gibbs energies of reactions . . . . .	236
7.7.9. Determining the standard Gibbs energies of the ions . . . . .	237
7.7.10. Determining the standard entropies of the ions. . . . .	238
7.7.11. Measuring the activity of a component of a non-ionic conductive solution (metal solution) . . . . .	238
7.7.12. Measuring the activity coefficient of transfer of a strong electrolyte . . . . .	241
7.7.13. Evaluating the individual activity coefficient of transport for an ion . . . . .	242
<b>Chapter 8. Potential/Acidity Diagrams</b> . . . . .	245
8.1. Conventions . . . . .	245
8.1.1. Plotting conventions . . . . .	245
8.1.2. Boundary equations . . . . .	246
8.2. Intersections of lines in the diagram . . . . .	249
8.2.1. Relative disposition of the lines in the vicinity of a triple point . . . . .	249
8.2.2. Shape of equi-concentration lines in the vicinity of a triple point . . . . .	250
8.3. Plotting a diagram: example of copper . . . . .	256
8.3.1. Step 1: list of species and thermodynamic data . . . . .	256
8.3.2. Step 2: choice of hydrated forms . . . . .	256
8.3.3. Step 3: study by degrees of oxidation of acid–base reactions; construction of the situation diagram . . . . .	257
8.3.4. Step 4: elimination of unstable species by dismutation . . . . .	259
8.3.5. Step 5: plotting the e/pH diagram . . . . .	261
8.4. Diagram for water superposed on the diagram for an element . . . . .	262
8.5. Immunity, corrosion and passivation . . . . .	263
8.6. Potential/pX (e/pX) diagrams . . . . .	264
8.7. Potential/acidity diagrams in a molten salt . . . . .	265
<b>Appendix</b> . . . . .	267
<b>Bibliography</b> . . . . .	275
<b>Index</b> . . . . .	279
