<b>INTRODUCTION</b> . . . . .	xi
<b>CHAPTER 1. ELEMENTS OF PROBABILITY THEORY AND STOCHASTIC PROCESSES</b> . . . . .	1
1.1. Notation . . . . .	2
1.2. Numerical characteristics of finite populations . . . . .	3
1.3. Matlab implementation . . . . .	7
1.3.1. Using a data vector . . . . .	7
1.3.2. Using a frequency table . . . . .	10
1.4. Couples of numerical characteristics . . . . .	11
1.5. Matlab implementation . . . . .	15
1.6. Hilbertian properties of the numerical characteristics . . . . .	21
1.6.1. Conditional probability and approximation . . . . .	23
1.6.2. Expectation and approximation of a constant . . . . .	25
1.6.3. Linear correlation and affine approximation . . . . .	26
1.6.4. Matlab implementation . . . . .	27
1.6.5. Conditional mean and best approximation . . . . .	31
1.7. Measure and probability . . . . .	33
1.8. Construction of measures . . . . .	36
1.8.1. Measurable sets . . . . .	36
1.8.2. Lebesgue measure on $\mathbb{R}^p$ . . . . .	41
1.8.3. Equivalent functions . . . . .	43
1.8.4. Integrals . . . . .	47
1.8.5. Measures defined by densities . . . . .	52

1.9. Measures, probability and integrals in infinite dimensional spaces . . . . .	53
1.9.1. Finite measures on infinite dimensional Hilbert spaces . . .	57
1.9.2. Integration involving a measure on an infinite dimensional Hilbert space . . . . .	62
1.10. Random variables . . . . .	65
1.10.1. Matlab implementation . . . . .	73
1.10.2. Couples of random variables . . . . .	76
1.11. Hilbertian properties of random variables . . . . .	80
1.11.1. Approximation . . . . .	82
1.12. Sequences of random variables . . . . .	88
1.12.1. Quadratic mean convergence . . . . .	88
1.12.2. Convergence in the mean . . . . .	89
1.12.3. Convergence in probability . . . . .	89
1.12.4. Almost sure convergence . . . . .	90
1.12.5. Convergence in distribution . . . . .	90
1.12.6. Relations among different types of convergence . . . . .	91
1.13. Some usual distributions . . . . .	91
1.13.1. Poisson distribution . . . . .	92
1.13.2. Uniform distribution . . . . .	92
1.13.3. Normal or Gaussian distribution . . . . .	92
1.13.4. Gaussian vectors . . . . .	94
1.14. Samples of random variables . . . . .	99
1.15. Gaussian samples . . . . .	101
1.16. Stochastic processes . . . . .	107
1.17. Hilbertian structure . . . . .	108
1.18. Wiener process . . . . .	112
1.19. Ito integrals . . . . .	114
1.19.1. Integrals with respect to time . . . . .	115
1.19.2. Integrals with respect to a process . . . . .	117
1.19.3. Integrals with respect to a Wiener process . . . . .	119
1.20. Ito Calculus . . . . .	122
1.20.1. Ito's formula . . . . .	122
1.20.2. Ito stochastic diffusions . . . . .	127
<b>CHAPTER 2. MAXIMUM ENTROPY AND INFORMATION . . . . .</b>	<b>133</b>
2.1. Construction of a stochastic model . . . . .	133
2.2. The principle of maximum entropy . . . . .	135

---

2.2.1. Discrete random variables . . . . .	136
2.2.2. Continuous random variables . . . . .	143
2.2.3. Random vectors . . . . .	153
2.2.4. Random matrices . . . . .	156
2.3. Generating samples of random variables, random vectors and stochastic processes . . . . .	159
2.4. Karhunen–Loève expansions and numerical generation of variates from stochastic processes . . . . .	161
2.4.1. Karhunen–Loève expansions . . . . .	162
2.4.2. Numerical determination of Karhunen–Loève expansions . . . . .	165
<b>CHAPTER 3. REPRESENTATION OF RANDOM VARIABLES . . . . .</b>	<b>177</b>
3.1. Approximations based on Hilbertian properties . . . . .	178
3.1.1. Using the conditional expectation in order to generate a representation . . . . .	181
3.1.2. Using the mean for the approximation by a constant . . . . .	184
3.1.3. Using the linear correlation in order to construct a representation . . . . .	186
3.1.4. Polynomial approximation . . . . .	189
3.1.5. General finite-dimensional approximations . . . . .	193
3.1.6. Approximation using a total family . . . . .	202
3.2. Approximations based on statistical properties (moment matching method) . . . . .	215
3.3. Interpolation-based approximations (collocation) . . . . .	222
<b>CHAPTER 4. LINEAR ALGEBRAIC EQUATIONS UNDER UNCERTAINTY . . . . .</b>	<b>227</b>
4.1. Representation of the solution of uncertain linear systems . . . . .	228
4.1.1. Case where the distributions are known . . . . .	229
4.1.2. Case where the distributions are unknown . . . . .	237
4.2. Representation of eigenvalues and eigenvectors of uncertain matrices . . . . .	243
4.2.1. Determination of the distribution of eigenvalues and eigenvectors by collocation . . . . .	245
4.2.2. Determination of the distribution of eigenvalues and eigenvectors by moment fitting . . . . .	249

---

4.2.3. Representation of extreme eigenvalues by optimization techniques . . . . .	249
4.2.4. Power iterations . . . . .	252
4.2.5. Subspace iterations and Krylov iterations . . . . .	255
4.3. Stochastic methods for deterministic linear systems . . . . .	260
<b>CHAPTER 5. NONLINEAR ALGEBRAIC EQUATIONS INVOLVING RANDOM PARAMETERS . . . . .</b>	<b>265</b>
5.1. Nonlinear systems of algebraic equations . . . . .	265
5.1.1. Collocation . . . . .	266
5.1.2. Moment fitting . . . . .	271
5.1.3. Variational approximation . . . . .	273
5.1.4. Adaptation of iterative methods . . . . .	279
5.2. Numerical solution of noisy deterministic systems of nonlinear equations . . . . .	288
<b>CHAPTER 6. DIFFERENTIAL EQUATIONS UNDER UNCERTAINTY . . . . .</b>	<b>297</b>
6.1. The case of linear differential equations . . . . .	298
6.2. The case of nonlinear differential equations . . . . .	306
6.3. The case of partial differential equations . . . . .	310
6.3.1. Linear equations . . . . .	310
6.3.2. Nonlinear equations . . . . .	311
6.3.3. Evolution equations . . . . .	312
6.4. Reduction of Hamiltonian systems . . . . .	314
6.4.1. Hamiltonian systems . . . . .	314
6.4.2. Reduction of autonomous Hamiltonian systems . . . . .	317
6.5. Local solution of deterministic differential equations by stochastic simulation . . . . .	319
6.5.1. Ordinary differential equations . . . . .	319
6.5.2. Elliptic partial differential equations . . . . .	325
6.5.3. Parabolic partial differential equations . . . . .	328
6.5.4. Finite difference schemes . . . . .	333
6.6. Statistics of dynamical systems . . . . .	336
6.6.1. Evaluation of statistics of the limit cycle . . . . .	340

<b>CHAPTER 7. OPTIMIZATION UNDER UNCERTAINTY</b> . . . . .	345
7.1. Representation of the solutions in unconstrained optimization . . . . .	346
7.1.1. Collocation . . . . .	347
7.1.2. Moment matching . . . . .	350
7.1.3. Stochastic optimization . . . . .	350
7.1.4. Adaptation of iterative methods . . . . .	351
7.1.5. Optimal criteria . . . . .	362
7.2. Stochastic methods in deterministic continuous optimization . . . . .	364
7.2.1. Version 1: Stochastic descent . . . . .	370
7.2.2. Version 2: Dynamics of Metropolis . . . . .	381
7.2.3. Version 3: Hybrid methods . . . . .	391
7.3. Population-based methods . . . . .	403
7.4. Determination of starting points . . . . .	407
<b>CHAPTER 8. RELIABILITY-BASED OPTIMIZATION</b> . . . . .	421
8.1. The model situation . . . . .	422
8.2. Reliability index . . . . .	424
8.3. FORM . . . . .	426
8.4. The bi-level or double-loop method . . . . .	427
8.5. One-level or single-loop approach . . . . .	428
8.6. Safety factors . . . . .	430
<b>BIBLIOGRAPHY</b> . . . . .	435
<b>INDEX</b> . . . . .	441
