

## Table of Contents

<b>Foreword</b> . . . . .	xi
<b>Abbreviations and Acronyms</b> . . . . .	xv
<b>Acknowledgments</b> . . . . .	xxvii
<b>Introduction</b> . . . . .	xxxiii
<b>Chapter 1. Network Evolutions, Applications and Their Synchronization Requirements</b> . . . . .	1
1.1. Introduction . . . . .	1
1.2. Evolution from plesiochronous digital hierarchy to optical transport networks . . . . .	3
1.2.1. Plesiochronous digital hierarchy and public switch telephone networks . . . . .	3
1.2.2. Evolution toward SDH and synchronous optical network . . . . .	7
1.2.3. Introduction of optical transport network in transport networks . . . . .	11
1.3. Migration and evolution in the next-generation networks: from time division multiplexing to packet networks . . . . .	12
1.3.1. Circuit emulation synchronization requirements . . . . .	14
1.4. Mobile networks and mobile backhaul . . . . .	17
1.4.1. Synchronization requirements in mobile networks . . . . .	22
1.5. Synchronization requirements in other applications . . . . .	27
1.6. The need to define new synchronization technologies . . . . .	28
1.7. Bibliography . . . . .	30
<b>Chapter 2. Synchronization Technologies</b> . . . . .	33
2.1. Fundamental aspects related to network synchronization . . . . .	33
2.2. Timing transport via the physical layer . . . . .	42
2.2.1. Synchronous Ethernet . . . . .	42

2.3. Packet timing . . . . .	47
2.3.1. Packet timing using traffic data . . . . .	47
2.3.2. Packet-based methods . . . . .	52
2.4. IEEE 1588 and its Precision Time Protocol . . . . .	55
2.4.1. Some essentials of IEEE 1588 . . . . .	56
2.4.2. IEEE 1588-2002: origin and limitations . . . . .	64
2.4.3. IEEE 1588-2008 and PTPv2 . . . . .	68
2.5. The concept of “profiles” . . . . .	75
2.5.1. Frequency profile . . . . .	77
2.5.2. Phase and time profile (ITU-T G.8275.1) . . . . .	81
2.6. Other packet-based protocols . . . . .	82
2.6.1. Packet-based timing: starting with CES . . . . .	82
2.6.2. Dedicated timing TDM PW . . . . .	86
2.6.3. NTP . . . . .	87
2.6.4. Summary and comparison . . . . .	91
2.7. GNSS and other radio clock sources . . . . .	94
2.7.1. Global and regional space-based timing system . . . . .	94
2.7.2. Regional terrestrial systems . . . . .	102
2.7.3. Comparison . . . . .	104
2.8. Summary . . . . .	105
2.9. Bibliography . . . . .	107
<b>Chapter 3. Synchronization Network Architectures in Packet Networks . . . . .</b>	<b>111</b>
3.1. The network synchronization layer . . . . .	111
3.1.1. Network layers and abstraction . . . . .	111
3.1.2. The synchronization layer . . . . .	116
3.2. Functional modeling . . . . .	117
3.3. Frequency synchronization topologies and redundancy schemes using SyncE . . . . .	119
3.3.1. Introduction . . . . .	119
3.3.2. Network topologies . . . . .	120
3.3.3. Redundancy and source traceability . . . . .	121
3.3.4. Use of SSM in real networks . . . . .	122
3.3.5. Networks involving SSUs . . . . .	130
3.3.6. Classical errors during SSM configuration . . . . .	131
3.3.7. Conclusion on synchronization topologies . . . . .	133
3.4. The IEEE 1588 standard and its applicability in telecommunication networks . . . . .	133
3.5. Frequency synchronization topologies and redundancy schemes using IEEE 1588 . . . . .	134
3.5.1. Redundancy schemes using IEEE 1588 . . . . .	136

3.6. Time synchronization topologies and redundancy schemes . . . . .	139
3.6.1. Locally distributed PRTC . . . . .	140
3.6.2. Packet-based method . . . . .	141
3.6.3. Resiliency and redundancy schemes . . . . .	142
3.7. Bibliography . . . . .	146
<b>Chapter 4. Synchronization Design and Deployments . . . . .</b>	<b>149</b>
4.1. High-level principles . . . . .	149
4.1.1. Network evolution . . . . .	152
4.1.2. Typical mobile networks requirements and evolutions . . . . .	158
4.2. MAKE or BUY network synchronization strategies . . . . .	161
4.2.1. Relationships between MAKE or BUY strategies for network connectivity and Synchronization . . . . .	162
4.2.2. MAKE or BUY network synchronization source strategies . . . . .	167
4.2.3. Fixed/mobile network scenarios . . . . .	170
4.3. Deployment of timing solutions for frequency synchronization needs . . . . .	182
4.3.1. Overview of synchronization solutions for frequency needs . . . . .	183
4.3.2. Synchronous Ethernet deployments . . . . .	184
4.3.3. IEEE 1588 end-to-end deployments . . . . .	196
4.4. Deployment of timing solutions for accurate phase/time synchronization needs . . . . .	220
4.4.1. GNSS deployments and associated issues . . . . .	221
4.4.2. IEEE 1588 full timing support deployments . . . . .	225
4.4.3. Possible migration paths toward IEEE 1588 phase/time profile . . . . .	236
4.5. Bibliography . . . . .	237
<b>Chapter 5. Management and Monitoring of Synchronization Networks . . . . .</b>	<b>239</b>
5.1. Introduction . . . . .	239
5.2. Network management systems and the telecommunications management network (TMN) . . . . .	240
5.3. Synchronization Network management: the synchronization plan and protection . . . . .	242
5.4. Provisioning and setup: manual versus automatic . . . . .	245
5.5. Monitoring functions . . . . .	246
5.6. Management issues in wireless backhaul . . . . .	249
5.7. Network OS integration: M.3000 versus SNMP . . . . .	250
5.8. Bibliography . . . . .	252

<b>Chapter 6. Security Aspects Impacting Synchronization</b> . . . . .	255
6.1. Security and synchronization . . . . .	255
6.1.1. Terminology used in security . . . . .	257
6.1.2. Synchronization in network security ensemble . . . . .	259
6.2. Security of the timing source . . . . .	261
6.2.1. Access security to device . . . . .	262
6.2.2. GNSS signal vulnerability. . . . .	263
6.2.3. Protecting and mitigating from compromise signal . . . . .	270
6.3. Security of synchronization distribution . . . . .	274
6.3.1. Security aspects of physical timing transmission . . . . .	275
6.3.2. Security aspects of packet-based timing transmission . . . . .	277
6.4. Synchronization risk management . . . . .	282
6.5. Bibliography . . . . .	284
<b>Chapter 7. Test and Measurement Aspects of Packet Synchronization Networks</b> . . . . .	287
7.1. Introduction. . . . .	287
7.2. Traditional metrics . . . . .	287
7.3. Equipment configuration . . . . .	292
7.4. Reference signals, cables and connectors . . . . .	293
7.5. Testing Synchronous Ethernet. . . . .	293
7.5.1. Testing the performance of SyncE EEC . . . . .	294
7.5.2. Testing the ESMC protocol . . . . .	304
7.6. Testing the IEEE 1588 end-to-end telecom profile . . . . .	308
7.6.1. Testing the telecom profile – protocol. . . . .	308
7.6.2. Testing the telecom profile – performance of packet networks . . . . .	316
7.6.3. Testing the telecom profile – performance of a PTP packet slave clock . . . . .	319
7.7. Bibliography . . . . .	326
<b>Appendix 1. Standards in Telecom Packet Networks Using Synchronous Ethernet and/or IEEE 1588</b> . . . . .	329
A1.1. Introduction . . . . .	329
A1.2. General content of ITU-T standards . . . . .	330
A1.2.1. Network level . . . . .	330
A1.2.2. Equipment level. . . . .	331
A1.2.3. Use of network and equipment specification. . . . .	332
A1.3. Summary of standards . . . . .	332
A1.3.1. Standards related to SyncE . . . . .	333
A1.3.2. Standards related to IEEE 1588 end-to-end telecom profile for frequency . . . . .	335

A1.3.3. Standards related to IEEE 1588 full timing support telecom profile for phase and time transport . . . . .	337
A1.4. Bibliography . . . . .	339
<b>Appendix 2. Jitter Estimation by Statistical Study (JESS)</b>	
<b>Metric Definition</b> . . . . .	341
A2.1. Mathematical definition of JESS . . . . .	341
A2.2. Mathematical definition of JESS-w . . . . .	342
<b>Permissions and Credits</b> . . . . .	345
<b>Biography</b> . . . . .	349
<b>Index</b> . . . . .	353
