

## Table of Contents

<b>Introduction</b> . . . . .	xiii
<b>Chapter 1. Diffusion Phenomena and Models</b> . . . . .	1
1.1. General presentation of diffusion process . . . . .	1
1.2. General balance equations . . . . .	6
1.3. Heat conduction equation . . . . .	10
1.4. Initial and boundary conditions . . . . .	12
<b>Chapter 2. Probabilistic Models of Diffusion Processes</b> . . . . .	17
2.1. Stochastic differentiation . . . . .	17
2.1.1. Definition . . . . .	17
2.1.2. Examples . . . . .	18
2.2. Itô's formula . . . . .	19
2.2.1. Stochastic differential of a product . . . . .	19
2.2.2. Itô's formula with time dependence . . . . .	19
2.2.3. Interpretation of Itô's formula . . . . .	21
2.2.4. Other extensions of Itô's formula . . . . .	21
2.3. Stochastic differential equations (SDE) . . . . .	24
2.3.1. Existence and unicity general theorem (Gikhman and Skorokhod) . . . . .	24
2.3.2. Solution of SDE under the canonical form . . . . .	28
2.4. Itô and diffusion processes . . . . .	28
2.4.1. Itô processes . . . . .	28
2.4.2. Diffusion processes . . . . .	29
2.4.3. Kolmogorov equations . . . . .	31
2.5. Some particular cases of diffusion processes . . . . .	32
2.5.1. Reduced form . . . . .	32
2.5.2. The OUV (Ornstein–Uhlenbeck–Vasicek) SDE . . . . .	32

2.5.3. Solution of the SDE of Black–Scholes–Samuelson . . . . .	34
2.6. Multidimensional diffusion processes . . . . .	36
2.6.1. Multidimensional SDE. . . . .	36
2.6.2. Multidimensional Itô and diffusion processes . . . . .	36
2.6.3. Properties of multidimensional diffusion processes. . . . .	37
2.6.4. Kolmogorov equations. . . . .	38
2.7. The Stroock–Varadhan martingale characterization of diffusions (Karlin and Taylor) . . . . .	41
2.8. The Feynman–Kac formula (Platen and Heath) . . . . .	42
2.8.1. Terminal condition . . . . .	42
2.8.2. Discounted payoff function . . . . .	43
2.8.3. Discounted payoff function and payoff rate . . . . .	44
<b>Chapter 3. Solving Partial Differential Equations of Second Order . . . . .</b>	<b>47</b>
3.1. Basic definitions on PDE of second order . . . . .	47
3.1.1. Notation . . . . .	47
3.1.2. Characteristics. . . . .	48
3.1.3. Canonical form of PDE . . . . .	50
3.2. Solving the heat equation. . . . .	51
3.2.1. Separation of variables. . . . .	54
3.2.2. Separation of variables in the rectangular Cartesian coordinates . . . . .	55
3.2.3. Orthogonality of functions . . . . .	57
3.2.4. Fourier series . . . . .	58
3.2.5. Sturm–Liouville problem . . . . .	59
3.2.6. One-dimensional homogeneous problem in a finite medium . . . . .	61
3.3. Solution by the method of Laplace transform. . . . .	65
3.3.1. Definition of the Laplace transform . . . . .	65
3.3.2. Properties of the Laplace transform . . . . .	67
3.4. Green’s functions . . . . .	75
3.4.1. Green’s function as auxiliary problem to solve diffusive problems . . . . .	76
3.4.2. Analysis for determination of Green’s function . . . . .	78
<b>Chapter 4. Problems in Finance . . . . .</b>	<b>85</b>
4.1. Basic stochastic models for stock prices . . . . .	85
4.1.1. The Black, Scholes and Samuelson model . . . . .	85
4.1.2. BSS model with deterministic variation of $\mu$ and $\sigma$ . . . . .	89
4.2. The bond investments. . . . .	90
4.2.1. Introduction . . . . .	90
4.2.2. Yield curve. . . . .	91
4.2.3. Yield to maturity for a financial investment and for a bond . . . . .	92

4.3. Dynamic deterministic continuous time model for instantaneous interest rate . . . . .	93
4.3.1. Instantaneous interest rate . . . . .	93
4.3.2. Particular cases . . . . .	94
4.3.3. Yield curve associated with instantaneous interest rate . . . . .	94
4.3.4. Examples of theoretical models . . . . .	95
4.4. Stochastic continuous time dynamic model for instantaneous interest rate . . . . .	98
4.4.1. The OUV stochastic model . . . . .	99
4.4.2. The CIR model (1985) . . . . .	105
4.5. Multidimensional Black and Scholes model . . . . .	110
<b>Chapter 5. Basic PDE in Finance.</b> . . . .	<b>111</b>
5.1. Introduction to option theory . . . . .	111
5.2. Pricing the plain vanilla call with the Black–Scholes–Samuelson model . . . . .	115
5.2.1. The PDE of Black and Scholes . . . . .	115
5.2.2. The resolution of the PDE of Black and Scholes without dividend repartition . . . . .	118
5.3. Pricing no plain vanilla calls with the Black-Scholes-Samuelson model . . . . .	120
5.3.1. The Girsanov theorem . . . . .	121
5.3.2. Application to the Black–Scholes–Samuelson model . . . . .	122
5.4. Zero-coupon pricing under the assumption of no arbitrage . . . . .	127
5.4.1. Stochastic dynamics of zero coupons . . . . .	127
5.4.2. Application of the no arbitrage principle and risk premium . . . . .	130
5.4.3. Partial differential equation for the structure of zero coupons . . . . .	131
5.4.4. Values of zero coupons without arbitrage opportunity for particular cases . . . . .	134
5.4.5. Value of a call on zero coupon . . . . .	141
5.4.6. Option on bond with coupons . . . . .	142
5.4.7. A numerical example . . . . .	144
<b>Chapter 6. Exotic and American Options Pricing Theory</b> . . . . .	<b>145</b>
6.1. Introduction . . . . .	145
6.2. The Garman–Kohlhagen formula . . . . .	146
6.3. Binary or digital options . . . . .	149
6.3.1. Definition . . . . .	149
6.3.2. Pricing of a call cash or nothing . . . . .	149
6.3.3. Case of the put cash or nothing . . . . .	150
6.4. “Asset or nothing” options . . . . .	150
6.4.1. Definition . . . . .	150

6.4.2. Pricing a call asset or nothing . . . . .	151
6.4.3. Premium of the put asset or nothing . . . . .	151
6.5. Numerical examples . . . . .	152
6.6. Path-dependent options . . . . .	153
6.6.1. The barrier options . . . . .	153
6.6.2. Lookback options . . . . .	156
6.6.3. Asiatic (or average) options . . . . .	157
6.7. Multi-asset options . . . . .	157
6.7.1. Definitions . . . . .	157
6.7.2. The multi-dimensional Black and Scholes equation . . . . .	158
6.7.3. Outperformance or Margrabe option . . . . .	159
6.7.4. Other related type options . . . . .	161
6.7.5. General case . . . . .	163
6.8. American options . . . . .	165
6.8.1. Early exercise in case of no dividend repartition . . . . .	165
6.8.2. Early exercise in case of dividend repartition . . . . .	165
6.8.3. The formula of Barone-Adesi and Whaley (BAW): approximated formula for American options . . . . .	167
6.8.4. Discretization and simulation . . . . .	174
<b>Chapter 7. Hitting Times for Diffusion Processes and Stochastic Models in Insurance . . . . .</b>	<b>177</b>
7.1. Hitting or first passage times for some diffusion processes . . . . .	177
7.1.1. First definitions . . . . .	177
7.1.2. Distribution of hitting times for the non-standard Brownian motion . . . . .	179
7.1.3. The Gaussian inverse (or normal inverse) distribution . . . . .	181
7.1.4. Other absorption problems for Brownian motion . . . . .	183
7.1.5. Other absorption problems for non-standard Brownian processes . . . . .	186
7.1.6. Results with probabilistic reasoning . . . . .	187
7.2. Merton's model for default risk . . . . .	193
7.2.1. Introduction . . . . .	193
7.2.2. Merton's model . . . . .	194
7.2.3. The Longstaff and Schwartz model . . . . .	199
7.3. Risk diffusion models for insurance . . . . .	201
7.3.1. Introduction . . . . .	201
7.3.2. The diffusion process (Cox and Miller, Gerber) . . . . .	202
7.3.3. First ALM model (ALM I) (Janssen) . . . . .	205
7.3.4. Second ALM model (ALM II) (Janssen) . . . . .	212

<b>Chapter 8. Numerical Methods</b> . . . . .	219
8.1. Introduction . . . . .	219
8.2. Discretization and numerical differentiation . . . . .	220
8.3. Finite difference methods . . . . .	222
<b>Chapter 9. Advanced Topics in Engineering: Nonlinear Models</b> . . . . .	231
9.1. Nonlinear model in heat conduction . . . . .	232
9.2. Integral method applied to diffusive problems . . . . .	233
9.3. Integral method applied to nonlinear problems . . . . .	239
9.4. Use of transformations in nonlinear problems . . . . .	243
9.4.1. Kirchhoff transformation . . . . .	243
9.4.2. Similarity methods . . . . .	246
<b>Chapter 10. Lévy Processes</b> . . . . .	255
10.1. Motivation . . . . .	255
10.2. Notion of characteristic functions . . . . .	257
10.3. Lévy processes . . . . .	257
10.4. Lévy–Khintchine formula . . . . .	259
10.5. Examples of Lévy processes . . . . .	261
10.6. Variance gamma (VG) process . . . . .	264
10.7. The Brownian–Poisson model with jumps . . . . .	266
10.7.1. Mixed arithmetic Brownian–Poisson and geometric Brownian–Poisson processes . . . . .	266
10.7.2. Merton model with jumps . . . . .	269
10.7.3. Stochastic differential equation (SDE) for mixed arithmetic Brownian–Poisson and geometric Brownian–Poisson processes . . . . .	271
10.7.4. Value of a European call for the lognormal Merton model . . . . .	274
10.8. Risk neutral measures for Lévy models in finance . . . . .	275
10.9. Conclusion . . . . .	276
<b>Chapter 11. Advanced Topics in Insurance: Copula Models and VaR Techniques</b> . . . . .	277
11.1. Introduction . . . . .	277
11.2. Sklar theorem (1959) . . . . .	279
11.3. Particular cases and Fréchet bounds . . . . .	280
11.3.1. Particular cases . . . . .	280
11.3.2. Fréchet bounds . . . . .	281
11.3.3. Examples of copula . . . . .	281
11.3.4. The normal copula . . . . .	285
11.3.5. Estimation of copula . . . . .	287
11.4. Dependence . . . . .	288

11.4.1. Conditional probabilities . . . . .	288
11.4.2. The correlation coefficient $\tau$ of Kendall . . . . .	289
11.5. Applications in finance: pricing of the bivariate digital put option . . . . .	293
11.6. VaR application in insurance. . . . .	296
11.6.1. VaR of one risky asset . . . . .	296
11.6.2. The VaR concept in relation with Solvency II . . . . .	303
<b>Chapter 12. Advanced Topics in Finance: Semi-Markov Models . . . . .</b>	<b>307</b>
12.1. Introduction . . . . .	307
12.2. Homogeneous semi-Markov process . . . . .	308
12.2.1. Basic definitions. . . . .	308
12.2.2. Basic properties . . . . .	310
12.2.3. Particular cases of MRP . . . . .	314
12.2.4. Asymptotic behavior of SMP . . . . .	317
12.2.5. Non-homogeneous semi-Markov process. . . . .	318
12.2.6. Discrete time homogeneous and non-homogeneous semi-Markov processes . . . . .	320
12.2.7. Homogeneous semi-Markov backward processes in discrete time. . . . .	323
12.2.8. Discrete time non-homogeneous backward semi-Markov processes. . . . .	325
12.3. Semi-Markov option model . . . . .	328
12.3.1. General model . . . . .	328
12.3.2. Particular case: semi-Markov Black–Scholes model . . . . .	330
12.3.3. Numerical application for the semi-Markov Black–Scholes model. . . . .	330
12.4. Semi-Markov VaR models . . . . .	332
12.4.1. The normal power (NP) approximation . . . . .	332
12.4.2. The Cornish–Fisher approximation . . . . .	333
12.4.3. VaR computation with a Pareto distribution . . . . .	333
12.4.4. VaR semi-Markov models. . . . .	335
12.4.5. Numerical applications for the semi-Markov VaR model . . . . .	336
12.4.6. Semi-Markov extension of the Merton’s model . . . . .	338
12.5. Conclusion . . . . .	339
<b>Chapter 13. Monte Carlo Semi-Markov Simulation Methods. . . . .</b>	<b>341</b>
13.1. Presentation of our simulation model. . . . .	341
13.2. The semi-Markov Monte Carlo model in a homogeneous environment . . . . .	345
13.3. A credit risk example . . . . .	350
13.3.1. Discrete time homogeneous semi-Markov reliability model. . . . .	350

13.3.2. A classical example of reliability for a mechanical system. . . . .	352
13.3.3. The semi-Markov reliability credit risk models . . . . .	355
13.3.4. A simplified example. . . . .	358
13.4. Semi-Markov Monte Carlo with initial recurrence backward time in homogeneous case. . . . .	362
13.5. The SMMC applied to claim reserving problem . . . . .	363
13.6. An example of claim reserving calculation . . . . .	366
13.6.1. Example of the merging process . . . . .	368
<b>Conclusion</b> . . . . .	379
<b>Bibliography</b> . . . . .	381
<b>Index</b> . . . . .	393
