<b>Acknowledgments</b>	ix
<b>Chapter 1. General Introductory Aspects</b>	1
1.1. Introduction	1
1.1.1. Mechanical models for metamaterials	2
1.2. Generalized continuum theories and some possible applications	6
1.2.1. Some basic aspects concerning generalized continuum theories	6
1.3. Woven fibrous composite reinforcements	10
1.4. Wave propagation in metamaterials	12
1.5. Reconstructed bone remodeling	14
1.6. Microstructure-driven energy dissipation in concrete	16
<b>Chapter 2. Fibrous Composite Reinforcements</b>	19
2.1. Woven fibrous composite reinforcements modeled as second gradient materials	21
2.2. Kinematics	24
2.3. Second gradient energy density for 3D interlocks	26
2.4. Constitutive choice for the first gradient energy	27
2.5. Constitutive choice for the second gradient energy	29
2.6. Least action principle and principle of virtual powers	31
2.6.1. Second gradient theory as the limit case of a micromorphic theory	31
2.7. Numerical simulations for three point bending of composite interlocks	34
2.7.1. Three point $0^\circ/90^\circ$ bending test: the effect of out-of plane yarns' bending stiffness	37

2.7.2. Three point $\pm 45^\circ$ bending test . . . . .	38
2.8. Bias extension test . . . . .	40
2.9. Numerical simulations . . . . .	43
2.9.1. First gradient limit solution . . . . .	44
2.9.2. Second gradient solution and the onset of boundary layers . . . . .	45
2.10. Conclusions . . . . .	46
<b>Chapter 3. Wave Propagation in Generalized Continua . . . . .</b>	49
3.1. Band gaps in the relaxed micromorphic continuum . . . . .	50
3.1.1. Equations of motion . . . . .	51
3.1.2. Plane wave propagation . . . . .	54
3.1.3. Numerical results . . . . .	55
3.2. Reflection and transmission of waves at discontinuity surfaces in second gradient continua . . . . .	59
3.2.1. Mechanical energy transport in second gradient continua . . . . .	60
3.2.2. Dispersion formulas . . . . .	62
3.2.3. Natural and kinematical boundary conditions at surfaces where displacement or normal derivative of displacement may be discontinuous . . . . .	65
3.2.4. Transmission and reflection at discontinuity surfaces . . . . .	69
3.2.5. Dependence of transmission and reflection coefficients on second gradient elastic moduli . . . . .	75
3.3. Conclusions . . . . .	80
<b>Chapter 4. Remodeling of Bone Reconstructed with Bio-resorbable Materials . . . . .</b>	83
4.1. Generalized continuum theories for bone remodeling in the presence or absence of biomaterial . . . . .	86
4.1.1. Microstructure-induced deformation patterns in bone . . . . .	87
4.2. A continuum two-solid mixture model for reconstructed bone remodeling . . . . .	91
4.2.1. Equilibrium equations accounting for mass creation and dissolution as driven by biomechanical coupling . . . . .	93
4.2.2. Bone remodeling equations . . . . .	94
4.3. A simple one-dimensional, linearized, isotropic problem . . . . .	97
4.3.1. Mechanical equilibrium equation and naturally associated boundary conditions . . . . .	98
4.3.2. Non-dimensional form of mechanical and biological equations . . . . .	99
4.4. Numerical simulations . . . . .	102
4.4.1. Effect of applied external force and biomaterial Young's modulus on remodeling . . . . .	104
4.5. Conclusions . . . . .	107

---

<b>Chapter 5. Energy Dissipation in Modified and Unmodified Concrete</b> . . . . .	109
5.1. A simple generalized continuum model for microstructure-related friction . . . . .	111
5.1.1. Simplified equations of motion based on Saint-Venant theory for the case of simple compression . . . . .	113
5.2. Numerical simulations: specimen in pure compression . . . . .	115
5.2.1. Effect of the basic parameters of the presented model on the area of dissipation loops . . . . .	117
5.2.2. Some remarks about experimental tests and results . . . . .	121
5.3. Conclusions . . . . .	123
<b>Bibliography</b> . . . . .	125
<b>Index</b> . . . . .	135
