

Table of Contents

Preface	xiii
PART 1. MATHEMATICAL STATISTICS	1
Chapter 1. Introduction to Mathematical Statistics	3
1.1. Generalities	3
1.2. Examples of statistics problems	4
1.2.1. Quality control	4
1.2.2. Measurement errors	5
1.2.3. Filtering	5
1.2.4. Confidence intervals	6
1.2.5. Homogeneity testing	7
Chapter 2. Principles of Decision Theory	9
2.1. Generalities	9
2.2. The problem of choosing a decision function	11
2.3. Principles of Bayesian statistics	13
2.3.1. Generalities	13
2.3.2. Determination of Bayesian decision functions	14
2.3.3. Admissibility of Bayes' rules	16
2.4. Complete classes	17
2.5. Criticism of decision theory – the asymptotic point of view	18
2.6. Exercises	18
Chapter 3. Conditional Expectation	21
3.1. Definition	21
3.2. Properties and extension	22
3.3. Conditional probabilities and conditional distributions	24

3.3.1. Regular version of the conditional probability	24
3.3.2. Conditional distributions	24
3.3.3. Theorem for integration with respect to the conditional distribution	25
3.3.4. Determination of the conditional distributions in the usual cases	25
3.4. Exercises	26
Chapter 4. Statistics and Sufficiency	29
4.1. Samples and empirical distributions	29
4.1.1. Properties of the empirical distribution and the associated statistics	30
4.2. Sufficiency	31
4.2.1. The factorization theorem	31
4.3. Examples of sufficient statistics – an exponential model	33
4.4. Use of a sufficient statistic	35
4.5. Exercises	36
Chapter 5. Point Estimation	39
5.1. Generalities	39
5.1.1. Definition – examples	39
5.1.2. Choice of a preference relation	40
5.2. Sufficiency and completeness	42
5.2.1. Sufficiency	42
5.2.2. Complete statistics	43
5.3. The maximum-likelihood method	45
5.3.1. Definition	45
5.3.2. Maximum likelihood and sufficiency	47
5.3.3. Calculating maximum-likelihood estimators	47
5.3.3.1. The Newton–Raphson method	48
5.4. Optimal unbiased estimators	49
5.4.1. Unbiased estimation	49
5.4.1.1. Existence of an unbiased estimator	50
5.4.2. Unbiased minimum-dispersion estimator	51
5.4.2.1. Application to an exponential model	52
5.4.2.2. Application to the Gaussian model	54
5.4.2.3. Use of the Lehmann–Scheffé theorem	55
5.4.3. Criticism of unbiased estimators	55
5.5. Efficiency of an estimator	56
5.5.1. The Fréchet–Darmois–Cramer–Rao inequality	56
5.5.1.1. Calculating $I(\theta)$	57
5.5.1.2. Properties of the Fisher information	58
5.5.1.3. The case of a biased estimator	59

5.5.2. Efficiency	60
5.5.3. Extension to \mathbb{R}^k	60
5.5.3.1. Properties of the information matrix	62
5.5.3.2. Efficiency	62
5.5.4. The non-regular case	64
5.5.4.1. “Superefficient” estimators	64
5.5.4.2. Cramer–Rao-type inequalities	64
5.6. The linear regression model	65
5.6.1. Generalities	65
5.6.2. Estimation of the parameter – the Gauss–Markov theorem	66
5.7. Exercises	68
Chapter 6. Hypothesis Testing and Confidence Regions	73
6.1. Generalities	73
6.1.1. The problem	73
6.1.2. Use of decision theory	73
6.1.2.1. Preference relation	74
6.1.3. Generalization	74
6.1.3.1. Preference relation	75
6.1.4. Sufficiency	75
6.2. The Neyman–Pearson (NP) lemma	75
6.3. Multiple hypothesis tests (general methods)	80
6.3.1. Testing a simple hypothesis against a composite one	80
6.3.1.1. The γ test	81
6.3.1.2. The λ test	81
6.3.2. General case – unbiased tests	82
6.3.2.1. Relation between unbiased tests and unbiased decision functions	83
6.4. Case where the ratio of the likelihoods is monotonic	84
6.4.1. Generalities	84
6.4.2. Unilateral tests	84
6.4.3. Bilateral tests	85
6.5. Tests relating to the normal distribution	86
6.6. Application to estimation: confidence regions	86
6.6.1. First preference relation on confidence regions	88
6.6.2. Relation to tests	88
6.7. Exercises	90
Chapter 7. Asymptotic Statistics	101
7.1. Generalities	101
7.2. Consistency of the maximum likelihood estimator	103
7.3. The limiting distribution of the maximum likelihood estimator	104

7.4. The likelihood ratio test	106
7.5. Exercises	108
Chapter 8. Non-Parametric Methods and Robustness	113
8.1. Generalities	113
8.2. Non-parametric estimation	114
8.2.1. Empirical estimators	114
8.2.2. Distribution and density estimation	114
8.2.2.1. Convergence of the estimator	115
8.2.3. Regression estimation	116
8.3. Non-parametric tests	117
8.3.1. The χ^2 test	117
8.3.2. The Kolmogorov–Smirnov test	120
8.3.3. The Cramer–von Mises test	120
8.3.4. Rank test	121
8.4. Robustness	121
8.4.1. An example of a robust test	122
8.4.2. An example of a robust estimator	122
8.4.3. A general definition of a robust estimator	123
8.5. Exercises	124
PART 2. STATISTICS FOR STOCHASTIC PROCESSES	131
Chapter 9. Introduction to Statistics for Stochastic Processes	133
9.1. Modeling a family of observations	133
9.2. Processes	134
9.2.1. The distribution of a process	134
9.2.2. Gaussian processes	135
9.2.3. Stationary processes	135
9.2.4. Markov processes	136
9.3. Statistics for stochastic processes	137
9.4. Exercises	138
Chapter 10. Weakly Stationary Discrete-Time Processes	141
10.1. Autocovariance and spectral density	141
10.2. Linear prediction and Wold decomposition	144
10.3. Linear processes and the ARMA model	146
10.3.1. Spectral density of a linear process	147
10.4. Estimating the mean of a weakly stationary process	149
10.5. Estimating the autocovariance	151
10.6. Estimating the spectral density	151
10.6.1. The periodogram	151

10.6.2. Convergent estimators of the spectral density	154
10.7. Exercises	155
Chapter 11. Poisson Processes – A Probabilistic and Statistical Study	163
11.1. Introduction	163
11.2. The axioms of Poisson processes	164
11.3. Interarrival time	166
11.4. Properties of the Poisson process	168
11.5. Notions on generalized Poisson processes	170
11.6. Statistics of Poisson processes	172
11.7. Exercises	177
Chapter 12. Square-Integrable Continuous-Time Processes	183
12.1. Definitions	183
12.2. Mean-square continuity	183
12.3. Mean-square integration	184
12.4. Mean-square differentiation	187
12.5. The Karhunen–Loeve theorem	188
12.6. Wiener processes	189
12.6.1. Karhunen–Loeve decomposition	192
12.6.2. Statistics of Wiener processes	193
12.7. Notions on weakly stationary continuous-time processes	195
12.7.1. Estimating the mean	196
12.7.2. Estimating the autocovariance	196
12.7.3. The case of a process observed at discrete instants	197
12.8. Exercises	197
Chapter 13. Stochastic Integration and Diffusion Processes	203
13.1. Itô integral	203
13.2. Diffusion processes	206
13.3. Processes defined by stochastic differential equations and stochastic integrals	212
13.4. Notions on statistics for diffusion processes	215
13.5. Exercises	216
Chapter 14. ARMA Processes	219
14.1. Autoregressive processes	219
14.2. Moving average processes	223
14.3. General ARMA processes	224
14.4. Non-stationary models	226
14.4.1. The Box–Cox transformation	226

14.4.2. Eliminating the trend by differentiation	227
14.4.3. Eliminating the seasonality	227
14.4.4. Introducing exogenous variables	228
14.5. Statistics of ARMA processes	228
14.5.1. Identification	228
14.5.2. Estimation	230
14.5.3. Verification	232
14.6. Multidimensional processes	232
14.7. Exercises	233
Chapter 15. Prediction	239
15.1. Generalities	239
15.2. Empirical methods of prediction	240
15.2.1. The empirical mean	240
15.2.2. Exponential smoothing	240
15.2.3. Naive predictors	241
15.2.4. Trend adjustment	241
15.3. Prediction in the ARIMA model	242
15.4. Prediction in continuous time	244
15.5. Exercises	245
PART 3. SUPPLEMENT	249
Chapter 16. Elements of Probability Theory	251
16.1. Measure spaces: probability spaces	251
16.2. Measurable functions: real random variables	253
16.3. Integrating real random variables	255
16.4. Random vectors	259
16.5. Independence	261
16.6. Gaussian vectors	262
16.7. Stochastic convergence	264
16.8. Limit theorems	265
Appendix. Statistical Tables	267
A1.1. Random numbers	267
A1.2. Distribution function of the standard normal distribution	268
A1.3. Density of the standard normal distribution	269
A1.4. Percentiles (t_p) of Student's distribution	270
A1.5. Ninety-fifth percentiles of Fisher-Snedecor distributions	271
A1.6. Ninety-ninth percentiles of Fisher-Snedecor distributions	272
A1.7. Percentiles (χ_p^2) of the χ^2 distribution with n degrees of freedom	273

A1.8. Individual probabilities of the Poisson distribution	274
A1.9. Cumulative probabilities of the Poisson distribution	275
A1.10. Binomial coefficients C_n^k for $n \leq 30$ and $0 \leq k \leq 7$	276
A1.11. Binomial coefficients C_n^k for $n \leq 30$ and $8 \leq k \leq 15$	277
Bibliography	279
