Foreword	xi
Preface	xiii
Introduction	xv
List of Acronyms	xix
Part 1. Theory	1
Chapter 1. Non-linear Signal Processing	3
1.1. Distributions	5
1.2. Variance.	6
1.3. Covariance	7
1.4. Stationarity	7
1.5. Bayes inference	7
1.6. Tensors in signal processing.	11
1.7. Processing the quantum signal	12
Chapter 2. Non-Gaussian Processes	15
2.1. Defining Gaussian processes	15
2.2. Non-Gaussian processes	15
2.3. Principal component analysis or Karhunen–Loève transformation	17
2.4. Sparse Gaussian processes	17
2.5. Levy process	18

2.6. Links with quantum communications	18
2.6.1. Wave function in P	19
2.6.2. The scalar product of two wave packets	19
2.6.3. Linear superposition of coherent states	20
Chapter 3. Sparse Signals and Compressed Sensing	23
3.1. Sparse Signals	23
3.2. Compressed sensing.	24
3.3. Compressed sensing and quantum signal	28
Chapter 4. The Fourier Transform	29
4.1. The Classic Fourier Transform	29
4.2. The Discrete Fourier Transform and the Fast Fourier Transform.	29
4.3. The Fourier Transform and hyper-functions	30
4.4. Hilbert Transform	31
4.4.1. Definition	31
4.5. Clifford algebra and the Fourier Transform.	33
4.6. Spinors and quantum signals.	34
Chapter 5. The Contribution of Arithmetic to Signal Processing	35
5.1. Gauss sums	35
5.1.1. Definition	36
5.2. Applications for Gauss sums.	38
Chapter 6. Riemannian Geometry and Signal Processing	41
6.1. Context	41
6.1.1. Voronoi diagrams in mobile communications	42
6.1.2. Voronoi diagrams in image processing	42
6.1.3. Voronoi diagrams in geosciences	42
6.1.4. Voronoi diagrams in quantum communications	43
6.2. Riemannian varieties	43
6.3. Voronoi cells	43
6.3.1. Definition	44
6.4. Applications to Voronoi cells	46

Part 2. Applications	49
Chapter 7. MIMO Systems	51
7.1. Introduction.	51
7.2. A brief history of OFDM.	53
7.3. Multi-carrier technology	54
7.4. OFDM technique	56
7.5. Generating OFDM symbols	58
7.6. Inter-symbol and inter-carrier interference	60
7.7. Cyclic prefix	61
7.8. Mathematical model of the OFDM system	62
7.8.1. Continuous time model	63
7.8.2. Discrete time model	66
7.9. MIMO channels	67
7.10. The MIMO channel model	69
7.11. MIMO OFDM channel model	70
Chapter 8. Minimizing Interferences in DS-CDMA Systems	71
8.1. Convolutional encoding	71
8.1.1. Introduction	71
8.2. Structure of convolutive codes	72
8.2.1. Convoluteive performance code $1/n$	72
8.2.2. Convoluteive performance code k/n	74
8.3. Polynomial representation	74
8.4. Graphic representations of convolutive codes	75
8.4.1. Tree diagram.	75
8.4.2. State diagram	76
8.4.3. Trellis diagram	77
8.5. Decoding algorithms	78
8.5.1. The Viterbi algorithm	78
8.5.2. Describing the Viterbi algorithm.	79
8.6. Discreet Wavelet Transform (DWT)	80
8.6.1. Introduction	80
8.6.2. Definition and property of the discreet wavelet transform	80
8.6.3. Orthogonality and biorthogonality: approximation space	81
8.7. Construction and discreet filtering	83
8.8. Defining the wavelet function: the place of detail	85
