

Table of Contents

Preface	xi
Terms and Notation	xv
Chapter 1. Censored and Truncated Data	1
1.1. Right-censored data	2
1.2. Left truncation	12
1.3. Left truncation and right censoring	14
1.4. Nelson–Aalen and Kaplan–Meier estimators	15
1.5. Bibliographic notes	17
Chapter 2. Chi-squared Tests	19
2.1. Chi-squared test for composite hypothesis	19
2.2. Chi-squared test for exponential distributions	31
2.3. Chi-squared tests for shape-scale distribution families	36
2.3.1. Chi-squared test for the Weibull distribution	39
2.3.2. Chi-squared tests for the loglogistic distribution	44
2.3.3. Chi-squared test for the lognormal distribution	46
2.4. Chi-squared tests for other families	51

2.4.1. Chi-squared test for the Gompertz distribution	53
2.4.2. Chi-squared test for distribution with hyperbolic hazard function	56
2.4.3. Bibliographic notes	59
2.5. Exercises	59
2.6. Answers	60

Chapter 3. Homogeneity Tests for Independent Populations 63

3.1. Data	64
3.2. Weighted logrank statistics	64
3.3. Logrank test statistics as weighted sums of differences between observed and expected number of failures	66
3.4. Examples of weights	67
3.5. Weighted logrank statistics as modified score statistics	69
3.6. The first two moments of weighted logrank statistics	71
3.7. Asymptotic properties of weighted logrank statistics	73
3.8. Weighted logrank tests	80
3.9. Homogeneity testing when alternatives are crossings of survival functions	85
3.9.1. Alternatives	86
3.9.2. Modified score statistics	88
3.9.3. Limit distribution of the modified score statistics	91
3.9.4. Homogeneity tests against crossing survival functions alternatives	92
3.9.5. Bibliographic notes	97
3.10. Exercises	98
3.11. Answers	102

Chapter 4. Homogeneity Tests for Related Populations	105
4.1. Paired samples	106
4.1.1. Data	106
4.1.2. Test statistics	107
4.1.3. Asymptotic distribution of the test statistic	107
4.1.4. The test	116
4.2. Logrank-type tests for homogeneity of related $k > 2$ samples	119
4.3. Homogeneity tests for related samples against crossing marginal survival functions alternatives	122
4.3.1. Bibliographic notes	124
4.4. Exercises	125
4.5. Answers	126
Chapter 5. Goodness-of-fit for Regression Models	127
5.1. Goodness-of-fit for the semi-parametric Cox model	127
5.1.1. The Cox model	127
5.1.2. Alternatives to the Cox model based on expanded models	128
5.1.3. The data and the modified score statistics	129
5.1.4. Asymptotic distribution of the modified score statistic	133
5.1.5. Tests	137
5.2. Chi-squared goodness-of-fit tests for parametric AFT models	142
5.2.1. Accelerated failure time model	142
5.2.2. Parametric AFT model	144
5.2.3. Data	144
5.2.4. Idea of test construction	145
5.2.5. Asymptotic distribution of H_n and Z	146
5.2.6. Test statistics	151
5.3. Chi-squared test for the exponential AFT model.	153

5.4. Chi-squared tests for scale-shape AFT models.	159
5.4.1. Chi-squared test for the Weibull AFT model	163
5.4.2. Chi-squared test for the lognormal AFT model	166
5.4.3. Chi-squared test for the loglogistic AFT model	169
5.5. Bibliographic notes	172
5.6. Exercises	173
5.7. Answers	174
APPENDICES	177
Appendix A. Maximum Likelihood Method for Censored Samples	179
A.1. ML estimators: right censoring	179
A.2. ML estimators: left truncation	181
A.3. ML estimators: left truncation and right censoring	182
A.4. Consistency and asymptotic normality of the ML estimators	186
A.5. Parametric ML estimation for survival regression models	187
Appendix B. Notions from the Theory of Stochastic Processes	191
B.1. Stochastic process	191
B.2. Counting process	193
B.3. Martingale and local martingale.	194
B.4. Stochastic integral	195
B.5. Predictable process and Doob–Meyer decomposition	197
B.6. Predictable variation and predictable covariation	198
B.7. Stochastic integrals with respect to martingales.	204
B.8. Central limit theorem for martingales	207

Appendix C. Semi-parametric Estimation using the Cox Model	211
C.1. Partial likelihood	211
C.2. Asymptotic properties of estimators	213
Bibliography	225
Index	231
