Preface	13
PART I	15
Chapter 1. Model Selection for Additive Regression in the Presence of Right-Censoring	17
Elodie BRUNEL and Fabienne COMTE	
1.1. Introduction	17
1.2. Assumptions on the model and the collection of approximation spaces	18
1.2.1. Non-parametric regression model with censored data	18
1.2.2. Description of the approximation spaces in the univariate case .	19
1.2.3. The particular multivariate setting of additive models	20
1.3. The estimation method	20
1.3.1. Transformation of the data	20
1.3.2. The mean-square contrast	21
1.4. Main result for the adaptive mean-square estimator	22
1.5. Practical implementation	23
1.5.1. The algorithm	23
1.5.2. Univariate examples	24
1.5.3. Bivariate examples	27
1.5.4. A trivariate example	28
1.6. Bibliography	30
Chapter 2. Non-parametric Estimation of Conditional Probabilities, Means and Quantiles under Bias Sampling	33
Odile PONS	
2.1. Introduction	33
2.2. Non-parametric estimation of p	34
2.3. Bias depending on the value of Y	35

6 Mathematical Methods in Survival Analysis, Reliability and Quality of Life

2.4. Bias due to truncation on X	37
2.5. Truncation of a response variable in a non-parametric regression model	37
2.6. Double censoring of a response variable in a non-parametric model	42
2.7. Other truncation and censoring of Y in a non-parametric model	44
2.8. Observation by interval	47
2.9. Bibliography	48

Chapter 3. Inference in Transformation Models for Arbitrarily Censored and Truncated Data 49

Filia VONTA and Catherine HUBER

3.1. Introduction	49
3.2. Non-parametric estimation of the survival function S	50
3.3. Semi-parametric estimation of the survival function S	51
3.4. Simulations	54
3.5. Bibliography	59

Chapter 4. Introduction of Within-area Risk Factor Distribution in Ecological Poisson Models 61

Léa FORTUNATO, Chantal GUIHENNEUC-JOUYAU, Dominique LAURIER, Margot TIRMARCHE, Jacqueline CLAVEL and Denis HÉMON

4.1. Introduction	61
4.2. Modeling framework	62
4.2.1. Aggregated model	62
4.2.2. Prior distributions	65
4.3. Simulation framework	65
4.4. Results	66
4.4.1. Strong association between relative risk and risk factor, correlated within-area means and variances (mean-dependent case)	67
4.4.2. Sensitivity to within-area distribution of the risk factor	68
4.4.3. Application: leukemia and indoor radon exposure	69
4.5. Discussion	71
4.6. Bibliography	72

Chapter 5. Semi-Markov Processes and Usefulness in Medicine 75

Eve MATHIEU-DUPAS, Claudine GRAS-AYGON and Jean-Pierre DAURÈS

5.1. Introduction	75
5.2. Methods	76
5.2.1. Model description and notation	76
5.2.2. Construction of health indicators	79
5.3. An application to HIV control	82
5.3.1. Context	82
5.3.2. Estimation method	82

5.3.3. Results: new indicators of health state	84
5.4. An application to breast cancer	86
5.4.1. Context	86
5.4.2. Age and stage-specific prevalence	87
5.4.3. Estimation method	88
5.4.4. Results: indicators of public health	88
5.5. Discussion	89
5.6. Bibliography	89
Chapter 6. Bivariate Cox Models	93
Michel BRONIATOWSKI, Alexandre DEPIRE and Ya'acov RITOV	
6.1. Introduction	93
6.2. A dependence model for duration data	93
6.3. Some useful facts in bivariate dependence	95
6.4. Coherence	98
6.5. Covariates and estimation	102
6.6. Application: regression of Spearman's rho on covariates	104
6.7. Bibliography	106
Chapter 7. Non-parametric Estimation of a Class of Survival Functionals	109
Belkacem ABDOUS	
7.1. Introduction	109
7.2. Weighted local polynomial estimates	111
7.3. Consistency of local polynomial fitting estimators	114
7.4. Automatic selection of the smoothing parameter	116
7.5. Bibliography	119
Chapter 8. Approximate Likelihood in Survival Models	121
Henning LÄUTER	
8.1. Introduction	121
8.2. Likelihood in proportional hazard models	122
8.3. Likelihood in parametric models	122
8.4. Profile likelihood	123
8.4.1. Smoothness classes	124
8.4.2. Approximate likelihood function	125
8.5. Statistical arguments	127
8.6. Bibliography	129
PART II	131
Chapter 9. Cox Regression with Missing Values of a Covariate having a Non-proportional Effect on Risk of Failure	133
Jean-François DUPUY and Eve LECONTE	

9.1. Introduction	133
9.2. Estimation in the Cox model with missing covariate values: a short review	136
9.3. Estimation procedure in the stratified Cox model with missing stratum indicator values	139
9.4. Asymptotic theory	141
9.5. A simulation study	145
9.6. Discussion	147
9.7. Bibliography	149
Chapter 10. Exact Bayesian Variable Sampling Plans for Exponential Distribution under Type-I Censoring	151
Chien-Tai LIN, Yen-Lung HUANG and N. BALAKRISHNAN	
10.1. Introduction	151
10.2. Proposed sampling plan and Bayes risk	152
10.3. Numerical examples and comparison	156
10.4. Bibliography	161
Chapter 11. Reliability of Stochastic Dynamical Systems Applied to Fatigue Crack Growth Modeling	163
Julien CHIQUET and Nikolaos LIMNIOS	
11.1. Introduction	163
11.2. Stochastic dynamical systems with jump Markov process	165
11.3. Estimation	168
11.4. Numerical application	170
11.5. Conclusion	175
11.6. Bibliography	175
Chapter 12. Statistical Analysis of a Redundant System with One Stand-by Unit	179
Vilijandas BAGDONAVIČIUS, Inga MASIULAITYTE and Mikhail NIKULIN	
12.1. Introduction	179
12.2. The models	180
12.3. The tests	181
12.4. Limit distribution of the test statistics	182
12.5. Bibliography	187
Chapter 13. A Modified Chi-squared Goodness-of-fit Test for the Three-parameter Weibull Distribution and its Applications in Reliability	189
Vassily VOINOV, Roza ALLOYAROVA and Natalie PYA	
13.1. Introduction	189
13.2. Parameter estimation and modified chi-squared tests	191

13.3. Power estimation	194
13.4. Neyman-Pearson classes	194
13.5. Discussion	197
13.6. Conclusion	198
13.7. Appendix	198
13.8. Bibliography	201
Chapter 14. Accelerated Life Testing when the Hazard Rate Function has Cup Shape	203
Vilijandas BAGDONAVIČIUS, Luc CLERJAUD and Mikhail NIKULIN	
14.1. Introduction	203
14.2. Estimation in the AFT-GW model	204
14.2.1. AFT model	204
14.2.2. AFT-Weibull, AFT-lognormal and AFT-GW models	205
14.2.3. Plans of ALT experiments	205
14.2.4. Parameter estimation: AFT-GW model	206
14.3. Properties of estimators: simulation results for the AFT-GW model	207
14.4. Some remarks on the second plan of experiments	211
14.5. Conclusion	213
14.6. Appendix	213
14.7. Bibliography	215
Chapter 15. Point Processes in Software Reliability	217
James LEDOUX	
15.1. Introduction	217
15.2. Basic concepts for repairable systems	219
15.3. Self-exciting point processes and black-box models	221
15.4. White-box models and Markovian arrival processes	225
15.4.1. A Markovian arrival model	226
15.4.2. Parameter estimation	228
15.4.3. Reliability growth	232
15.5. Bibliography	234
PART III	237
Chapter 16. Likelihood Inference for the Latent Markov Rasch Model	239
Francesco BARTOLUCCI, Fulvia PENNONI and Monia LUPPARELLI	
16.1. Introduction	239
16.2. Latent class Rasch model	240
16.3. Latent Markov Rasch model	241
16.4. Likelihood inference for the latent Markov Rasch model	243
16.4.1. Log-likelihood maximization	244

16.4.2. Likelihood ratio testing of hypotheses on the parameters	245
16.5. An application	246
16.6. Possible extensions	247
16.6.1. Discrete response variables	248
16.6.2. Multivariate longitudinal data	248
16.7. Conclusions	251
16.8. Bibliography	252
Chapter 17. Selection of Items Fitting a Rasch Model	255
Jean-Benoit HARDOUIN and Mounir MESBAH	
17.1. Introduction	255
17.2. Notations and assumptions	256
17.2.1. Notations	256
17.2.2. Fundamental assumptions of the Item Response Theory (IRT) .	256
17.3. The Rasch model and the multidimensional marginally sufficient Rasch model	256
17.3.1. The Rasch model	256
17.3.2. The multidimensional marginally sufficient Rasch model	257
17.4. The Raschfit procedure	258
17.5. A fast version of Raschfit	259
17.5.1. Estimation of the parameters under the fixed effects Rasch model	259
17.5.2. Principle of Raschfit-fast	260
17.5.3. A model where the new item is explained by the same latent trait as the kernel	260
17.5.4. A model where the new item is not explained by the same latent trait as the kernel	260
17.5.5. Selection of the new item in the scale	261
17.6. A small set of simulations to compare Raschfit and Raschfit-fast . . .	261
17.6.1. Parameters of the simulation study	261
17.6.2. Results and computing time	264
17.7. A large set of simulations to compare Raschfit-fast, MSP and HCA/CCPROX	269
17.7.1. Parameters of the simulations	269
17.7.2. Discussion	270
17.8. The Stata module “Raschfit”	270
17.9. Conclusion	271
17.10. Bibliography	273
Chapter 18. Analysis of Longitudinal HrQoL using Latent Regression in the Context of Rasch Modeling	275
Silvia BACCI	
18.1. Introduction	275
18.2. Global models for longitudinal data analysis	276

18.3. A latent regression Rasch model for longitudinal data analysis	278
18.3.1. Model structure	278
18.3.2. Correlation structure	280
18.3.3. Estimation	281
18.3.4. Implementation with SAS	281
18.4. Case study: longitudinal HrQoL of terminal cancer patients	283
18.5. Concluding remarks	287
18.6. Bibliography	289
Chapter 19. Empirical Internal Validation and Analysis of a Quality of Life Instrument in French Diabetic Patients during an Educational Intervention	291
Judith CHWALOW, Keith MEADOWS, Mounir MESBAH, Vincent COLICHE and Étienne MOLLET	
19.1. Introduction	291
19.2. Material and methods	292
19.2.1. Health care providers and patients	292
19.2.2. Psychometric validation of the DHP	293
19.2.3. Psychometric methods	293
19.2.4. Comparative analysis of quality of life by treatment group	294
19.3. Results	295
19.3.1. Internal validation of the DHP	295
19.3.2. Comparative analysis of quality of life by treatment group	303
19.4. Discussion	304
19.5. Conclusion	305
19.6. Bibliography	306
19.7. Appendices	309
PART IV	315
Chapter 20. Deterministic Modeling of the Size of the HIV/AIDS Epidemic in Cuba	317
Rachid LOUNES, Héctor DE ARAZOZA, Y.H. HSIEH and Jose JOANES	
20.1. Introduction	317
20.2. The models	319
20.2.1. The k_2X model	322
20.2.2. The k_2Y model	322
20.2.3. The k_2XY model	323
20.2.4. The $k_2\frac{XY}{X+Y}$ model	324
20.3. The underreporting rate	324
20.4. Fitting the models to Cuban data	325
20.5. Discussion and concluding remarks	326
20.6. Bibliography	330

Chapter 21. Some Probabilistic Models Useful in Sport Sciences	333
Léo GERVILLE-RÉACHE, Mikhail NIKULIN, Sébastien ORAZIO, Nicolas PARIS and Virginie ROSA	
21.1. Introduction	333
21.2. Sport jury analysis: the Gauss-Markov approach	334
21.2.1. Gauss-Markov model	334
21.2.2. Test for non-objectivity of a variable	334
21.2.3. Test of difference between skaters	335
21.2.4. Test for the less precise judge	336
21.3. Sport performance analysis: the fatigue and fitness approach	337
21.3.1. Model characteristics	337
21.3.2. Monte Carlo simulation	338
21.3.3. Results	339
21.4. Sport equipment analysis: the fuzzy subset approach	339
21.4.1. Statistical model used	340
21.4.2. Sensorial analysis step	341
21.4.3. Results	342
21.5. Sport duel issue analysis: the logistic simulation approach	343
21.5.1. Modeling by logistic regression	344
21.5.2. Numerical simulations	345
21.5.3. Results	345
21.6. Sport epidemiology analysis: the accelerated degradation approach	347
21.6.1. Principle of degradation in reliability analysis	347
21.6.2. Accelerated degradation model	348
21.7. Conclusion	350
21.8. Bibliography	350
Appendices	353
A. European Seminar: Some Figures	353
A.1. Former international speakers invited to the European Seminar	353
A.2. Former meetings supported by the European Seminar	353
A.3. Books edited by the organizers of the European Seminar	354
A.4. Institutions supporting the European Seminar (names of colleagues)	355
B. Contributors	357
