INTRODUCTION	ix
CHAPTER 1. DECISION-MAKING	1
1.1. Normative theory versus engineering theory	3
1.2. The decision process	5
1.2.1. Simon's IDC model	5
1.2.2. Supplementing the IDC model.	8
1.2.3. Structuring decisions	10
1.2.4. Defined problems (tame) and undefined problems (wicked).	10
1.2.5. Group decision-making	12
1.3. Decision-making within the organization.	13
1.3.1. Managing a complex system	13
1.3.2. The main components of the management system	15
1.3.3. Indicator, index and information useful to the decision maker.	20
1.3.4. Typology of objectives and indicators	22
1.3.5. Support to define the global management system or support for action decisions?	24
1.3.6. Management levels	27
1.3.7. Toward decision support for the three management levels	30
1.3.8. Standardizing decisions.	31
1.3.9. Taking into account the dynamic of organizations and their environment.	32
1.4. Changes to management within organizations.	33
1.4.1. Connections with the environment	33

1.4.2. Boundaries	34
1.4.3. Innovation	36
1.4.4. Requirements linked to information systems	36
1.4.5. Changes to public institutions: territorial authorities	39
CHAPTER 2. DECISION SUPPORT SYSTEMS	43
2.1. DSS: definitions and typologies	44
2.1.1. Definitions	44
2.1.2. Standard components of a decision support system	47
2.1.3. Typologies of decision support systems	48
2.1.4. A brief history of research in the domain	51
2.1.5. Business intelligence	53
2.1.6. A specific type of decision support tool: Big Data	55
2.1.7. Criticisms leveled at business intelligence	62
2.2. DSS engineering	62
2.2.1. The components of a design method for IT systems or DSS	63
2.2.2. Requirements engineering (not specific to DSS)	69
2.2.3. Requirements engineering for DSS	75
CHAPTER 3. THE INFLUENCE OF DSS ON DECISION-MAKING AND ASSOCIATED RISKS	89
3.1. Factors influencing decision-making	90
3.1.1. The three types of problem-solving error	92
3.1.2. The role of perspectives in problem formulation	93
3.1.3. Mental representations, worldviews and beliefs	94
3.1.4. The influence of management technologies	97
3.1.5. IS: performative systems.	98
3.1.6. Indicators: an extreme case of reduced complexity.	99
3.1.7. IT: a technology of representations	101
3.1.8. DSS: support and/or constraint?	103
3.1.9. Big Data: a massive “effect of reality”	104
3.1.10. DSS as systems of influence: persuasive technologies	105
3.1.11. Conclusion	108

3.2. Risks linked to the use of DSS in decision-making	108
3.2.1. Inaccuracies in the results produced	109
3.2.2. Confusing the map and the territory	112
3.2.3. The risk of losing diversity	114
3.2.4. Toward more and more predictivity?	117
3.2.5. Exacerbated risks in the case of decisions defining the management system	123
CHAPTER 4. ELEMENTS FOR ETHICAL DSS DESIGN	127
4.1. Computer ethics	129
4.1.1. A brief history	129
4.1.2. Ethical theories	131
4.1.3. The values of computer ethics	134
4.1.4. Ethics in IT system development	136
4.2. Ethics in DSS development	138
4.2.1. A brief history/state-of-the-art	138
4.2.2. A reminder of the issues	144
4.2.3. Design phases to be favored	147
4.2.4. Conclusion	149
4.3. Our contribution to an engineering of responsibility	149
4.3.1. The doxai, principles and norms (DPN) model	150
4.3.2. Applying the DPN model for evaluation.	154
GENERAL CONCLUSION	161
BIBLIOGRAPHY	167
