
Contents

Chapter 1. Mathematical Bases	1
1.1. Introduction to stochastic risk analysis	1
1.1.1. About the subject	1
1.1.2. About the ruin model	2
1.2. Basic methods	4
1.2.1. Some concepts of probability theory	4
1.2.2. Markov processes	14
1.2.3. Poisson process	18
1.2.4. Gamma process	21
1.2.5. Inverse gamma process	23
1.2.6. Renewal process	24
Chapter 2. Cramér-Lundberg Model	29
2.1. Infinite horizon	29
2.1.1. Initial probability space	29
2.1.2. Dynamics of a homogeneous insurance company portfolio	30
2.1.3. Ruin time	33
2.1.4. Parameters of the gain process	33
2.1.5. Safety loading	35
2.1.6. Pollaczek-Khinchin formula	36
2.1.7. Sub-probability distribution G_+	38

2.1.8. Consequences from the Pollaczek-Khinchin formula	41
2.1.9. Adjustment coefficient of Lundberg	44
2.1.10. Lundberg inequality	45
2.1.11. Cramér asymptotics	46
2.2. Finite horizon	49
2.2.1. Change of measure	49
2.2.2. Theorem of Gerber	54
2.2.3. Change of measure with parameter gamma	56
2.2.4. Exponential distribution of claim size	57
2.2.5. Normal approximation	64
2.2.6. Diffusion approximation	68
2.2.7. The first exit time for the Wiener process	70
Chapter 3. Models With the Premium Dependent on the Capital	77
3.1. Definitions and examples	77
3.1.1. General properties	78
3.1.2. Accumulation process	81
3.1.3. Two levels	86
3.1.4. Interest rate	90
3.1.5. Shift on space	91
3.1.6. Discounted process	92
3.1.7. Local factor of Lundberg	98
Chapter 4. Heavy Tails	107
4.1. Problem of heavy tails	107
4.1.1. Tail of distribution	107
4.1.2. Subexponential distribution	109
4.1.3. Cramér-Lundberg process	117
4.1.4. Examples	120
4.2. Integro-differential equation	124
Chapter 5. Some Problems of Control	129
5.1. Estimation of probability of ruin on a finite interval	129

5.2. Probability of the credit contract realization	130
5.2.1. Dynamics of the diffusion-type capital	132
5.3. Choosing the moment at which insurance begins	135
5.3.1. Model of voluntary individual insurance	135
5.3.2. Non-decreasing continuous semi-Markov process	139
Bibliography	147
Index	149
