

Table of Contents

Chapter 1. Services Offered by Home Area Networks.	1
1.1. Why home networking?	1
1.2. Service convergence	2
1.2.1. Triple play	4
1.2.2. Quadruple play.	6
1.2.3. Services linked to the person.	7
1.2.4. Home services, energy saving, intelligent housing	8
1.3. IP or non-IP home area networks	8
1.3.1. Comparison with automobiles: the requirement of standards for home networks	10
1.4. Bibliography	11
1.5. Appendix: the uses of very high bit rates	11
1.5.1. Progressive deployment	13
1.5.2. Client ubiquity	16
Chapter 2. Receiving Television via Internet: IPTV	19
2.1. Introduction	20
2.2. Digital TV formats (DVB and MPEG standards)	20
2.2.1. MPEG.	20
2.2.2. DVB	21
2.3. Digital TV transmission through IP	29
2.3.1. History and market.	29
2.3.2. The evolution of consumer trends	32
2.4. IPTV: elements of the network	33
2.4.1. General points	33
2.4.2. Data transmission in an IPTV network.	37
2.4.3. Quality of service	40

2.4.4. IP channel-switching	48
2.4.5. IPTV in a local loop	49
2.5. Set-top box (STB) hardware and software design.	50
2.5.1. IPTV middleware	51
2.5.2. Content protection	52
2.5.3. Interactivity	52
2.6. Bibliography	53
2.7. Appendix: notes on digital television	53
2.7.1. Video	53
2.7.2. Screens, size and resolution	55
2.7.3. Production	57
Chapter 3. Household Internet Connections	61
3.1. Network cables	61
3.1.1. Introduction	61
3.1.2. Communication media	63
3.1.3. The DOCSIS/EURODOCSIS standard	69
3.1.4. Modems and DOCSIS/EURODOCSIS CMTS	72
3.1.5. RF DOCSIS/EURODOCSIS signals	73
3.1.6. Sizing optical nodes for DOCSIS services	77
3.1.7. Digital Television	78
3.1.8. Analog television	79
3.1.9. The last mile: from local loop VHF to fiber.	80
3.1.10. Transport and distribution of signals from headend to local loops.	84
3.2. Internet access by means of outdoor PLC	91
3.2.1. Structure of an electrical supply network	92
3.2.2. Use of the electric pair by PLC	93
3.2.3. Frequencies used by PLC	95
3.2.4. PLC standards	96
3.2.5. Administration of an outdoor PLC	97
3.3. Fiber optics to the home (FTTH).	98
3.3.1. Introduction	98
3.3.2. Fiber optic technologies	99
3.3.3. Fiber optic cables	104
3.3.4. Lasers, LEDs and optical receivers.	106
3.3.5. Fiber optic subscriber connections: FTTx	107
3.3.6. Fiber to the Home (FTTH)	119
3.4. xDSL networks	120
3.4.1. Introduction	120
3.4.2. General points	121
3.4.3. ADSL technology	124

3.4.4. Data organization: ADSL frame and superframe	128
3.4.5. Elements of ADSL access	129
3.4.6. Protocol architecture for ADSL	133
3.4.7. Gigabit Ethernet transmission	139
3.4.8. Unbundling	140
3.4.9. Services over an ADSL network.	141
3.5. High bit rate radio: satellite, WiMAX and LTE	144
3.5.1. Introduction	144
3.5.2. Worldwide Inter-operability for Microwave Access (WiMAX)	145
3.5.3. LTE (-SAE)	149
3.5.4. Internet by satellite.	151
3.6. Bibliography	152
Chapter 4. Home Area Network Technologies	155
4.1. Copper pair cables	155
4.2. The home network in coaxial cable	157
4.2.1. Communication mediums.	158
4.2.2. Transported signals: DOCSIS/EURODOCSIS	159
4.2.3. Terminal section.	159
4.2.4. FTTLA beyond 2012	160
4.3. Home networks using indoor power line communications . .	160
4.3.1. Standards and norms	163
4.3.2. Possibility of two different networks.	164
4.3.3. Safeguarding the local network	164
4.3.4. Analysis and administration.	164
4.4. LTE femtocells	165
4.4.1. Introduction.	165
4.4.2. The LTE standard and femtocells	166
4.5. Plastic optical fibers	167
4.5.1. POF transmission	167
4.5.2. IEEE 1394 standard	171
4.5.3. Recognition of other mediums and external connections	174
4.6. WiFi home area networks	175
4.6.1. Introduction.	175
4.6.2. General points	176
4.6.3. Connection to the Internet using radio waves	177
4.6.4. WiFi protocol layers	177
4.6.5. Successive WiFi standards	183
4.6.6. Transmission technologies	183
4.6.7. WiFi network deployment	189
4.6.8. Privacy	195

4.6.9. 802.11n: the future of WiFi.	200
4.7. Home gateway.	204
4.8. Bibliography	206
Chapter 5. Software Structure used in Home Area Networks	207
5.1. Characteristics of Home Area Networks.	207
5.1.1. Heterogeneity.	208
5.1.2. Dynamicity	209
5.1.3. Absence of an administrator	210
5.2. The digital leisure network: UPNP/DLNA	211
5.2.1. The UPNP/DLNA organization and certification	211
5.2.2. Devices, service and action models	213
5.2.3. Classes of devices: home, mobile, internetwork	217
5.2.4. Formats: images, audio, video	222
5.2.5. Network and transport of media	223
5.2.6. Conclusion	226
5.3. Home systems networks	226
5.3.1. The needs of home systems networks	226
5.3.2. MAC and physical layers on an RF network: IEEE 802.15.4	228
5.3.3. Networking and datalinking over an RF network: example of ZigBee	233
5.3.4. Networking and datalinking over an electric cabled network	235
Chapter 6. Software Structures in Use for Home Area Networks	237
6.1. Service gateways	237
6.1.1. The role of a service gateway.	237
6.1.2. Service administration: OSGi bundles	239
6.1.3. Collection and redistribution of information: contexts and methods.	242
6.2. Security in home systems and multimedia networks	242
6.2.1. Service access methods	242
6.2.2. Virtual networks (VPN)	244
6.3. Bibliography	245
Chapter 7. Service Platforms.	247
7.1. Service platform for a managed network	247
7.1.1. Services.	247

7.1.2. Servers	249
7.2. Internet kiosk on an unmanaged network	252
7.2.1. General points	252
7.2.2. Security.	253
7.2.3. Private life.	254
7.2.4. Development languages of applications.	254
7.3. Sharing resources	255
Glossary	259
Index	271
