INTRODUCTION ix

CHAPTER 1. THE SUBJECT WITHIN THE FIELD OF MANAGEMENT SCIENCE: CONCEPTS AND ISSUES 1

1.1. Strategic management and strategic decision-making 3
1.2. Strategic decision-making and anticipation 6
1.2.1. Knowing and anticipating 6
1.2.2. Anticipating and deciding 8
1.2.3. Anticipating for effective decision-making 12
1.2.4. Characteristics of a strategic decision 15
1.3. Anticipation, anticipative information and weak signals 16
1.3.1. Weak signals 17
1.3.2. Characteristics of a weak signal 20
1.3.3. Weak signals for anticipation 21
1.3.4. Where might we find a weak signal? 23
1.3.5. Usefulness of weak signals in strategic decision-making 24
1.4. Weak signals and anticipative strategic scanning 25
1.4.1. Anticipative strategic scanning and weak-signal detection 25
1.4.2. The use of weak signals depends on managers' wishes 30
1.5. Organizational issues in anticipative strategic scanning, which could weaken strategic decision-making 31
1.5.1. Definition of "targeting" of anticipative strategic scanning 32

1.5.2. Insufficient information: too restrictive a target, and the consequences for strategic decision-making 34
1.5.3. Too much information: consequences of information overload for strategic decision-making 36
1.5.4. Detecting a weak signal in an information-overload situation (in a full text) 43
1.6. Conclusion: concepts discussed, issues noted and resulting requirements 45

CHAPTER 2. STATE OF THE ART: SYSTEMS SUGGESTED BY PREVIOUS AUTHORS 47

2.1. Entry point: collective interpretation of a set of homogeneous weak signals to make sense. 48
2.1.1. Interpreting weak signals: sense-making 49
2.1.2. How about sense-making using images, remotely? 51
2.1.3. Puzzle method: example 52
2.2. Directly detecting a weak signal in a full text 58
2.3. Automatically selecting a "useful" information fragment (a "brief", for our purposes) 59
2.3.1. Data overload versus "useful" information fragments 59
2.3.2. Managers want automation of information detection 61
2.3.3. Is it possible to automate the detection of potentially useful information? 63
2.3.4. Prototype of a device to filter data obtained from Web 2.0: ABIMA 65
2.4. Improving weak-signal detection by improving the target 68
2.4.1. What should we scan for in the environment? 68
2.4.2. Learning about the boundary of the environment being scanned 68
2.4.3. An automated technique to help change an organization's peripheral vision 69
2.5. Conclusion 71

CHAPTER 3. PROPOSED SYSTEMS: RESULTS OF INFORMATION SYSTEM PROTOTYPING RESEARCH CONDUCTED AT THE CNRS-CERAG LAB (FRANCE) 73

3.1. TARGETBUILDER, an aid to targeting scanning priorities 74
3.1.1. Usefulness 74

3.1.2. Principle behind TARGETBUILDER system 75
3.1.3. Recap on TARGETBUILDER 81
3.2. APROXIMA, automated extraction of fragments (briefs), which may hold weak signals 82
3.2.1. Usefulness 82
3.2.2. Principle behind APROXIMA system 82
3.2.3. Case study: application to the topic of "solar/photovoltaic" power 86
3.2.4. Recap on APROXIMA 91
3.3. ALHENA, an aid to finding connections between weak signals 92
3.3.1. Usefulness 92
3.3.2. Principle behind ALHENA system 93
3.3.3. Case study: application to the topic of "CO_2 valorization" 94
3.4. Conclusion 105

CONCLUSION 107
