<b>FOREWORD</b> . . . . .	xiii
Luis FARIÑAS DEL CERRO	
<b>CHAPTER 1. SYMBOLIC REPRESENTATION AND INFERENCE OF REGULATORY NETWORK STRUCTURES</b> . . . . .	1
Nataly MAIMARI, Krysia BRODA, Antonis KAKAS, Rob KRAMS and Alessandra RUSSO	
1.1. Introduction: logical modeling and abductive inference in systems biology . . . . .	1
1.2. Logical modeling of regulatory networks . . . . .	4
1.2.1. Background . . . . .	4
1.2.2. Logical model of signed-directed networks . . . . .	9
1.3. Evaluation of the ARNI approach . . . . .	21
1.3.1. ARNI predictive power . . . . .	21
1.3.2. ARNI expressive power . . . . .	27
1.4. ARNI assisted scientific methodology . . . . .	33
1.4.1. Testing biological hypotheses . . . . .	33
1.4.2. Informative experiments for networks discrimination . . . . .	39
1.5. Related work and comparison with non-symbolic approaches . . . . .	40
1.5.1. Limitations and future work . . . . .	42
1.6. Conclusions . . . . .	43
1.7. Bibliography . . . . .	44
<b>CHAPTER 2. REASONING ON THE RESPONSE OF LOGICAL SIGNALING NETWORKS WITH ASP</b> . . . . .	49
Torsten SCHAUB, Anne SIEGEL and Santiago VIDELA	
2.1. Introduction . . . . .	49
2.2. Answer set programming at a glance . . . . .	54

2.3. Learn and control logical networks with ASP . . . . .	57
2.3.1. Preliminaries . . . . .	57
2.3.2. Reasoning on the response of logical networks . . . . .	58
2.3.3. Learning models of immediate-early response . . . . .	64
2.3.4. Minimal intervention strategies . . . . .	78
2.3.5. Software toolbox: caspo . . . . .	85
2.4. Conclusion . . . . .	86
2.5. Acknowledgments . . . . .	87
2.6. Bibliography . . . . .	87
<b>CHAPTER 3. A LOGICAL MODEL FOR MOLECULAR INTERACTION MAPS . . . . .</b>	<b>93</b>
Robert DEMOLOMBE, Luis FARIÑAS DEL CERRO and Najji OBEID	
3.1. Introduction . . . . .	93
3.2. Biological background . . . . .	95
3.3. Logical model . . . . .	97
3.3.1. Activation and inhibition . . . . .	98
3.3.2. Model extension . . . . .	101
3.3.3. Causality relations redefinition . . . . .	105
3.4. Quantifier elimination for restricted formulas . . . . .	108
3.4.1. Domain formulas . . . . .	109
3.4.2. Restricted formulas . . . . .	109
3.4.3. Completion formulas . . . . .	110
3.4.4. Domain of domain formulas . . . . .	110
3.4.5. Quantifier elimination procedure . . . . .	112
3.5. Reasoning about interactions in metabolic interaction maps . . . . .	114
3.6. Conclusion and future work . . . . .	120
3.7. Acknowledgments . . . . .	121
3.8. Bibliography . . . . .	121
<b>CHAPTER 4. ANALYZING LARGE NETWORK DYNAMICS WITH PROCESS HITTING . . . . .</b>	<b>125</b>
Loïc PAULEVÉ, Courtney CHANCELLOR, Maxime FOLSCHETTE, Morgan MAGNIN and Olivier ROUX	
4.1. Introduction/state of the art . . . . .	125
4.1.1. The modeling challenge . . . . .	125
4.1.2. Historical context: Boolean and discrete models . . . . .	126
4.1.3. Analysis issues . . . . .	127
4.1.4. The process hitting framework . . . . .	128
4.1.5. Outline . . . . .	129
4.2. Discrete modeling with the process hitting . . . . .	129
4.2.1. Motivation . . . . .	129
4.2.2. The process hitting framework . . . . .	130

---

4.2.3. Generalized dynamics of interaction graphs . . . . .	131
4.2.4. Refining dynamics with cooperativity . . . . .	134
4.2.5. Relationship with Boolean/multivalued networks . . . . .	138
4.3. Static analysis of discrete dynamics . . . . .	141
4.3.1. Motivation . . . . .	141
4.3.2. Fixed points . . . . .	141
4.3.3. Abstract Interpretation using graphs of local causality . . . . .	143
4.3.4. Cut sets . . . . .	148
4.4. Toward a stochastic semantic . . . . .	150
4.4.1. Numerical techniques . . . . .	152
4.4.2. Rates and stochastic absorption . . . . .	154
4.5. Biological Applications . . . . .	156
4.5.1. The Tool PINT . . . . .	156
4.5.2. Biological examples . . . . .	157
4.6. Conclusion . . . . .	161
4.6.1. Assessment . . . . .	161
4.6.2. Future work . . . . .	163
4.7. Bibliography . . . . .	164
<b>CHAPTER 5. ASP FOR CONSTRUCTION AND VALIDATION OF REGULATORY BIOLOGICAL NETWORKS . . . . .</b>	<b>167</b>
Alexandre ROCCA, Nicolas MOBILIA, Éric FANCHON, Tony RIBEIRO, Laurent TRILLING and Katsumi INOUE	
5.1. Introduction . . . . .	167
5.2. Preliminaries: ASP and biological logical networks . . . . .	169
5.2.1. Answer set programming . . . . .	169
5.2.2. Boolean networks and Thomas networks . . . . .	171
5.3. Temporal logics . . . . .	173
5.3.1. Definition of LTL and CTL . . . . .	173
5.3.2. ASP implementation of CTL and LTL . . . . .	176
5.3.3. Example of model checking of a Boolean network . . . . .	180
5.3.4. Discussion . . . . .	182
5.4. ASP-based analysis of a GRN . . . . .	183
5.4.1. ASP Thomas networks specification . . . . .	183
5.4.2. Biological data modeling . . . . .	187
5.4.3. Methodology for building models . . . . .	192
5.4.4. Applications . . . . .	194
5.4.5. Discussion . . . . .	197
5.5. Conclusions . . . . .	199
5.6. Acknowledgments . . . . .	199
5.7. Appendix on an advanced modeling for taking into additive constraints	200
5.7.1. Lowering the enumeration of literals . . . . .	200

5.7.2. Conjunction of defaults and appropriate use of the paralogical maximization operator . . . . .	202
5.8. Bibliography . . . . .	204
<b>CHAPTER 6. SIMULATION-BASED REASONING ABOUT BIOLOGICAL PATHWAYS USING PETRI NETS AND ASP . . . . .</b>	<b>207</b>
Saadat ANWAR, Chitta BARAL and Katsumi INOUE	
6.1. Introduction . . . . .	207
6.2. Background . . . . .	209
6.2.1. Answer set programming . . . . .	209
6.2.2. Multiset . . . . .	212
6.2.3. Petri net . . . . .	212
6.3. Translating basic Petri net into ASP . . . . .	215
6.3.1. An example execution . . . . .	218
6.4. Changing firing semantics . . . . .	218
6.5. Extension - reset arcs . . . . .	219
6.6. Extension - inhibitor arcs . . . . .	222
6.7. Extension - read arcs . . . . .	223
6.8. Extension - colored tokens . . . . .	225
6.9. Translating Petri nets with colored tokens to ASP . . . . .	227
6.10. Extension - priority transitions . . . . .	230
6.11. Extension – timed transitions . . . . .	232
6.12. Other extensions . . . . .	233
6.13. Answering simulation-based reasoning questions . . . . .	234
6.13.1. Comparing altered trajectories due to reset intervention . . . . .	234
6.13.2. Determining conditions leading to an observation . . . . .	237
6.14. Related work . . . . .	240
6.15. Conclusion . . . . .	241
6.16. Bibliography . . . . .	241
<b>CHAPTER 7. FORMAL METHODS APPLIED TO GENE NETWORK MODELING . . . . .</b>	<b>245</b>
Gilles BERNOT, Jean-Paul COMET and El Houssine SNOUSSI	
7.1. Introduction . . . . .	245
7.2. From gene interactions to gene network modeling . . . . .	247
7.2.1. Gene regulations and regulatory genes . . . . .	247
7.2.2. Reverse engineering . . . . .	249
7.3. Logic: a tool for multidisciplinary with experimental sciences . . . . .	251
7.3.1. What we expect from models . . . . .	251
7.3.2. A logical multidisciplinary research process . . . . .	256
7.4. Thomas and Sifakis should have met . . . . .	259
7.4.1. Thomas' multivalued approach . . . . .	260
7.4.2. Temporal logic applied to gene networks . . . . .	268

7.5. Consistency of biological hypotheses . . . . .	271
7.5.1. The brute force approach . . . . .	271
7.5.2. Model simplifications . . . . .	274
7.6. Validation of biological hypotheses . . . . .	276
7.6.1. “Wet” experiments and logic formulas . . . . .	277
7.6.2. Experimental strategy . . . . .	281
7.7. Conclusion . . . . .	285
7.8. Acknowledgments . . . . .	286
7.9. Bibliography . . . . .	286

**CHAPTER 8. TEMPORAL LOGIC MODELING OF DYNAMICAL BEHAVIORS: FIRST-ORDER PATTERNS AND SOLVERS . . . . . 291**

François FAGES and Pauline TRAYNARD

8.1. Temporal logic FO-LTL( $\mathbb{R}_{lin}$ ) . . . . .	292
8.1.1. Syntax . . . . .	292
8.1.2. Semantics: validity domains of free variables . . . . .	293
8.1.3. Generic solver . . . . .	294
8.1.4. Complexity . . . . .	296
8.1.5. Trace simplification . . . . .	297
8.1.6. Continuous satisfaction degree in $[0,1]$ . . . . .	297
8.2. Formula patterns and dedicated solvers . . . . .	299
8.2.1. Temporal operator patterns . . . . .	299
8.2.2. Thresholds . . . . .	299
8.2.3. Amplitudes . . . . .	301
8.2.4. Local maxima . . . . .	303
8.2.5. Monotony . . . . .	304
8.2.6. Peaks . . . . .	305
8.2.7. Oscillations . . . . .	307
8.3. Study case: coupled model of the cell cycle and the circadian clock . . . . .	309
8.3.1. Circadian molecular clock model . . . . .	310
8.3.2. Cell cycle model . . . . .	311
8.3.3. Coupling of the cell cycle with the circadian clock through <i>WEE1</i> . . . . .	311
8.3.4. Successive peak-to-peak distances . . . . .	313
8.3.5. Oscillations with precise phase shifts and imprecise amplitudes . . . . .	314
8.3.6. Filtering out damped oscillations . . . . .	315
8.3.7. Phase constraints . . . . .	316
8.3.8. Model calibration to real data . . . . .	318
8.3.9. Comparison of solvers . . . . .	319
8.4. Related work . . . . .	320
8.5. Conclusion . . . . .	321
8.5.1. Acknowledgments . . . . .	321
8.6. Bibliography . . . . .	321

---

<b>CHAPTER 9. ANALYZING SBGN-AF NETWORKS USING NORMAL LOGIC PROGRAMS</b> . . . . .	325
Adrien ROUGNY, Christine FROIDEVAUX, Yoshitaka YAMAMOTO and Katsumi INOUE	
9.1. Introduction . . . . .	325
9.2. The systems biology graphical notation . . . . .	326
9.3. Normal logic programs . . . . .	328
9.3.1. Transformation of normal logic programs . . . . .	331
9.4. Translation of SBGN-AF into logic programming . . . . .	332
9.4.1. Special glyphs . . . . .	333
9.4.2. Mapping nodes and labels to constants and translation conventions . . . . .	333
9.4.3. Activity nodes . . . . .	334
9.4.4. Auxiliary units . . . . .	334
9.4.5. Container nodes . . . . .	336
9.4.6. Modulation arcs . . . . .	337
9.4.7. Logical operators . . . . .	338
9.4.8. Example . . . . .	338
9.4.9. Ontological axioms . . . . .	339
9.4.10. Typing axioms . . . . .	340
9.5. Boolean modeling of SBGN-AF signaling networks dynamics . . . . .	340
9.5.1. From signaling to Boolean networks . . . . .	340
9.5.2. Boolean network based on biological assumptions . . . . .	343
9.5.3. Modeling the dynamics of signaling networks in logic programming . . . . .	345
9.5.4. Transformation procedure . . . . .	348
9.5.5. Computing finite trajectories . . . . .	354
9.5.6. Computing point attractors . . . . .	355
9.6. Discussion . . . . .	356
9.7. Conclusion . . . . .	358
9.8. Bibliography . . . . .	359
<b>CHAPTER 10. MACHINE LEARNING OF BIOLOGICAL NETWORKS USING ABDUCTIVE ILP</b> . . . . .	363
Alireza TAMADDONI-NEZHAD, Dianhuan LIN, Hiroaki WATANABE, Jianzhong CHEN and Stephen MUGGLETON	
10.1. Introduction . . . . .	363
10.1.1. Logic-based machine learning and abductive ILP . . . . .	363
10.1.2. Machine learning of biological networks . . . . .	365
10.2. Machine learning of metabolic networks applied to predictive toxicology . . . . .	366
10.2.1. Logical modeling of inhibition in metabolic networks . . . . .	368
10.2.2. Empirical evaluation . . . . .	371
10.3. Multi-clause learning of metabolic control points . . . . .	375
10.3.1. Single-clause learning vs multi-clause learning . . . . .	376
10.3.2. Learning metabolic control points using multi-clause A/ILP . . . . .	377

---

10.3.3. Empirical evaluation . . . . .	379
10.4. Learning a causal network from temporal gene expression data . . . .	382
10.4.1. Finding causal relationships using A/ILP . . . . .	384
10.4.2. A probabilistic ILP approach for characterizing the hypothesis space . . . . .	385
10.4.3. Empirical evaluation . . . . .	386
10.5. Automatic construction of probabilistic trophic networks . . . . .	389
10.5.1. Machine learning of trophic links using A/ILP . . . . .	390
10.5.2. Hypothesis Frequency Estimation (HFE) . . . . .	392
10.5.3. Empirical evaluation . . . . .	393
10.6. Related work and discussion . . . . .	394
10.7. Conclusions . . . . .	396
10.8. Acknowledgments . . . . .	397
10.9. Bibliography . . . . .	397
<b>LIST OF AUTHORS</b> . . . . .	<b>403</b>
<b>INDEX</b> . . . . .	<b>407</b>
