Foreword	ix
Preface	xiii
Introduction	xvii
Chapter 1. Seismicity and Earthquake Catalogues Described as Point Processes	1
1.1. The Gutenberg–Richter law	2
1.2. The time-independent Poisson model	5
1.3. Occurrence rate density as a space–time continuous variable	7
1.4. Time-independent spatial distribution	9
1.5. Clustered seismicity	10
1.6. Epidemic models	13
Chapter 2. The Likelihood of a Hypothesis	15
2.1. The Bayes theorem	15
2.2. Likelihood function	18
2.3. Alternative formulations	20
2.4. Likelihood ratio	22
Chapter 3. The Likelihood for a Model of Continuous Rate Density Distribution	25
3.1. The limit case of regions of infinitesimal dimensions	25
3.2. The case of discrete regions	27

3.3. The case of time independence	27
3.4. The likelihood of an epidemic model in a 4-D space of parameters	29
Chapter 4. Forecast Verification Procedures	31
4.1. Scoring procedures	34
4.2. The binary diagrams	35
4.2.1. The ROC diagrams	36
4.2.2. Molchan's error diagram	38
4.2.3. Probability gain	39
4.2.4. R-score	40
4.3. Statistical tests implemented within CSEP	41
4.3.1. Number test or N-test	42
4.3.2. Data-consistency test or L-test	43
4.3.3. S(pace)-test or S-test	44
4.3.4. M(agnitude)-test or M-test	44
Chapter 5. Applications of Epidemic Models	45
5.1. Declustering a catalogue through an epidemic model	45
5.2. Earthquake forecasting	50
5.3. Seismic hazard maps for short-term forecast	55
Chapter 6. Long-term Earthquake Occurrence Models	59
6.1. The empirical Gutenberg–Richter law and the time-independent model under the Poisson hypothesis	60
6.2. Statistics of inter-event times	63
6.3. The truncated magnitude distribution	64
6.4. Earthquake rate assessment under a renewal time-dependent model	66
6.4.1. Exponential distribution (under the time-dependent hypothesis).	68
6.4.2. Log-normal distribution	69
6.4.3. Gamma distribution	69
6.4.4. Weibull distribution	70
6.4.5. Double-exponential distribution	70
6.4.6. BPT distribution	71

6.5. Validation and comparison of renewal time-dependent models.	72
6.5.1. The likelihood ratio.	72
6.5.2. Long-term earthquake records	73
6.5.3. Application of a Monte Carlo procedure	74
6.5.4. Concluding remarks	78
6.6. The Cornell method for time-independent seismic hazard assessment.	80
6.7. Acknowledgments.	82
Chapter 7. Computer Programs and Examples of their Use.	83
7.1. PDE2REC, ZMAP2REC.	83
7.2. REC2PDE.	88
7.3. SMOOTH.	90
7.4. LIKELAQP.	94
7.5. LIKSTAQP.	103
7.6. BPT	117
Bibliography.	121
Index.	137
