<b>INTRODUCTION</b> . . . . .	xi
<b>CHAPTER 1. BASIC PROBABILISTIC TOOLS FOR STOCHASTIC MODELING</b> . . . . .	1
1.1. Probability space and random variables . . . . .	1
1.2. Expectation and independence . . . . .	4
1.3. Main distribution probabilities . . . . .	7
1.3.1. Binomial distribution. . . . .	7
1.3.2. Negative exponential distribution . . . . .	8
1.3.3. Normal (or Laplace–Gauss) distribution . . . . .	8
1.3.4. Poisson distribution. . . . .	11
1.3.5. Lognormal distribution . . . . .	11
1.3.6. Gamma distribution . . . . .	12
1.3.7. Pareto distribution . . . . .	13
1.3.8. Uniform distribution . . . . .	16
1.3.9. Gumbel distribution . . . . .	16
1.3.10. Weibull distribution. . . . .	16
1.3.11. Multi-dimensional normal distribution . . . . .	17
1.3.12. Extreme value distribution. . . . .	19
1.4. The normal power (NP) approximation . . . . .	28
1.5. Conditioning . . . . .	31
1.6. Stochastic processes. . . . .	39
1.7. Martingales . . . . .	43
<b>CHAPTER 2. HOMOGENEOUS AND NON-HOMOGENEOUS RENEWAL MODELS</b> . . . . .	47
2.1. Introduction. . . . .	47
2.2. Continuous time non-homogeneous convolutions . . . . .	49

2.2.1. Non-homogeneous convolution product . . . . .	49
2.3. Homogeneous and non-homogeneous renewal processes. . . . .	53
2.4. Counting processes and renewal functions . . . . .	56
2.5. Asymptotical results in the homogeneous case . . . . .	61
2.6. Recurrence times in the homogeneous case . . . . .	63
2.7. Particular case: the Poisson process . . . . .	66
2.7.1. Homogeneous case . . . . .	66
2.7.2. Non-homogeneous case . . . . .	68
2.8. Homogeneous alternating renewal processes . . . . .	69
2.9. Solution of non-homogeneous discrete time evolution equation . . . . .	71
2.9.1. General method . . . . .	71
2.9.2. Some particular formulas . . . . .	73
2.9.3. Relations between discrete time and continuous time renewal equations . . . . .	74
<b>CHAPTER 3. MARKOV CHAINS . . . . .</b>	<b>77</b>
3.1. Definitions . . . . .	77
3.2. Homogeneous case . . . . .	78
3.2.1. Basic definitions . . . . .	78
3.2.2. Markov chain state classification. . . . .	81
3.2.3. Computation of absorption probabilities . . . . .	87
3.2.4. Asymptotic behavior . . . . .	88
3.2.5. Example: a management problem in an insurance company. . . . .	93
3.3. Non-homogeneous Markov chains . . . . .	95
3.3.1. Definitions . . . . .	95
3.3.2. Asymptotical results . . . . .	98
3.4. Markov reward processes . . . . .	99
3.4.1. Classification and notation . . . . .	99
3.5. Discrete time Markov reward processes (DTMRWPs) . . . . .	102
3.5.1. Undiscounted case . . . . .	102
3.5.2. Discounted case. . . . .	105
3.6. General algorithms for the DTMRWP . . . . .	111
3.6.1. Homogeneous MRWP . . . . .	112
3.6.2. Non-homogeneous MRWP . . . . .	112
<b>CHAPTER 4. HOMOGENEOUS AND NON-HOMOGENEOUS SEMI-MARKOV MODELS . . . . .</b>	<b>113</b>
4.1. Continuous time semi-Markov processes . . . . .	113
4.2. The embedded Markov chain . . . . .	117

4.3. The counting processes and the associated semi-Markov process . . . . .	118
4.4. Initial backward recurrence times . . . . .	120
4.5. Particular cases of MRP . . . . .	122
4.5.1. Renewal processes and Markov chains . . . . .	122
4.5.2. MRP of zero-order (PYKE (1962)) . . . . .	122
4.5.3. Continuous Markov processes . . . . .	124
4.6. Examples . . . . .	124
4.7. Discrete time homogeneous and non-homogeneous semi-Markov processes . . . . .	127
4.8. Semi-Markov backward processes in discrete time . . . . .	129
4.8.1. Definition in the homogeneous case . . . . .	129
4.8.2. Semi-Markov backward processes in discrete time for the non-homogeneous case. . . . .	130
4.8.3. DTSMMP numerical solutions . . . . .	133
4.9. Discrete time reward processes . . . . .	137
4.9.1. Undiscounted SMRWP . . . . .	137
4.9.2. Discounted SMRWP . . . . .	141
4.9.3. General algorithms for DTSMRWP . . . . .	144
4.10. Markov renewal functions in the homogeneous case. . . . .	146
4.10.1. Entrance times . . . . .	146
4.10.2. The Markov renewal equation . . . . .	150
4.10.3. Asymptotic behavior of an MRP . . . . .	151
4.10.4. Asymptotic behavior of SMP . . . . .	153
4.11. Markov renewal equations for the non-homogeneous case . . . . .	158
4.11.1. Entrance time . . . . .	158
4.11.2. The Markov renewal equation . . . . .	162
<b>CHAPTER 5. STOCHASTIC CALCULUS . . . . .</b>	<b>165</b>
5.1. Brownian motion . . . . .	165
5.2. General definition of the stochastic integral. . . . .	167
5.2.1. Problem of stochastic integration . . . . .	167
5.2.2. Stochastic integration of simple predictable processes and semi-martingales . . . . .	168
5.2.3. General definition of the stochastic integral . . . . .	170
5.3. Itô's formula . . . . .	177
5.3.1. Quadratic variation of a semi-martingale . . . . .	177
5.3.2. Itô's formula . . . . .	179
5.4. Stochastic integral with standard Brownian motion as an integrator process . . . . .	180
5.4.1. Case of simple predictable processes . . . . .	181
5.4.2. Extension to general integrator processes. . . . .	183

5.5. Stochastic differentiation . . . . .	184
5.5.1. Stochastic differential . . . . .	184
5.5.2. Particular cases . . . . .	184
5.5.3. Other forms of Itô's formula . . . . .	185
5.6. Stochastic differential equations . . . . .	191
5.6.1. Existence and unicity general theorem . . . . .	191
5.6.2. Solution of stochastic differential equations . . . . .	195
5.6.3. Diffusion processes. . . . .	199
5.7. Multidimensional diffusion processes . . . . .	202
5.7.1. Definition of multidimensional Itô and diffusion processes . . . . .	203
5.7.2. Properties of multidimensional diffusion processes. . . . .	203
5.7.3. Kolmogorov equations. . . . .	205
5.7.4. The Stroock–Varadhan martingale characterization of diffusion processes . . . . .	208
5.8. Relation between the resolution of PDE and SDE problems. The Feynman–Kac formula . . . . .	209
5.8.1. Terminal payoff. . . . .	209
5.8.2. Discounted payoff function . . . . .	210
5.8.3. Discounted payoff function and payoff rate . . . . .	210
5.9. Application to option theory . . . . .	213
5.9.1. Options . . . . .	213
5.9.2. Black and Scholes model . . . . .	216
5.9.3. The Black and Scholes partial differential equation (BSPDE) and the BS formula . . . . .	216
5.9.4. Girsanov theorem. . . . .	219
5.9.5. The risk-neutral measure and the martingale property . . . . .	221
5.9.6. The risk-neutral measure and the evaluation of derivative products . . . . .	224
<b>CHAPTER 6. LÉVY PROCESSES . . . . .</b>	<b>227</b>
6.1. Notion of characteristic functions. . . . .	227
6.2. Lévy processes . . . . .	228
6.3. Lévy–Khintchine formula . . . . .	230
6.4. Subordinators. . . . .	234
6.5. Poisson measure for jumps. . . . .	234
6.5.1. The Poisson random measure. . . . .	234
6.5.2. The compensated Poisson process . . . . .	235
6.5.3. Jump measure of a Lévy process. . . . .	236
6.5.4. The Itô–Lévy decomposition . . . . .	236

6.6. Markov and martingale properties of Lévy processes . . . . .	237
6.6.1. Markov property . . . . .	237
6.6.2. Martingale properties . . . . .	239
6.6.3. Itô formula . . . . .	240
6.7. Examples of Lévy processes . . . . .	240
6.7.1. The lognormal process: Black and Scholes process . . . . .	240
6.7.2. The Poisson process . . . . .	241
6.7.3. Compensated Poisson process . . . . .	242
6.7.4. The compound Poisson process . . . . .	242
6.8. Variance gamma (VG) process . . . . .	244
6.8.1. The gamma distribution . . . . .	244
6.8.2. The VG distribution . . . . .	245
6.8.3. The VG process . . . . .	246
6.8.4. The Esscher transformation . . . . .	247
6.8.5. The Carr–Madan formula for the European call . . . . .	249
6.9. Hyperbolic Lévy processes . . . . .	250
6.10. The Esscher transformation . . . . .	252
6.10.1. Definition . . . . .	252
6.10.2. Option theory with hyperbolic Lévy processes . . . . .	253
6.10.3. Value of the European option call . . . . .	255
6.11. The Brownian–Poisson model with jumps . . . . .	256
6.11.1. Mixed arithmetic Brownian–Poisson and geometric Brownian–Poisson processes . . . . .	256
6.11.2. Merton model with jumps . . . . .	258
6.11.3. Stochastic differential equation (SDE) for mixed arithmetic Brownian–Poisson and geometric Brownian–Poisson processes . . . . .	261
6.11.4. Value of a European call for the lognormal Merton model . . . . .	264
6.12. Complete and incomplete markets . . . . .	264
6.13. Conclusion . . . . .	265
<b>CHAPTER 7. ACTUARIAL EVALUATION, VAR AND STOCHASTIC INTEREST RATE MODELS . . . . .</b>	<b>267</b>
7.1. VaR technique . . . . .	267
7.2. Conditional VaR value . . . . .	271
7.3. Solvency II . . . . .	276
7.3.1. The SCR indicator . . . . .	276
7.3.2. Calculation of MCR . . . . .	278

7.3.3. ORSA approach . . . . .	279
7.4. Fair value . . . . .	280
7.4.1. Definition . . . . .	280
7.4.2. Market value of financial flows . . . . .	281
7.4.3. Yield curve. . . . .	281
7.4.4. Yield to maturity for a financial investment and a bond . . . . .	283
7.5. Dynamic stochastic time continuous time model for instantaneous interest rate . . . . .	284
7.5.1. Instantaneous deterministic interest rate . . . . .	284
7.5.2. Yield curve associated with a deterministic instantaneous interest rate. . . . .	285
7.5.3. Dynamic stochastic continuous time model for instantaneous interest rate. . . . .	286
7.5.4. The OUV stochastic model . . . . .	287
7.5.5. The CIR model . . . . .	289
7.6. Zero-coupon pricing under the assumption of no arbitrage. . . . .	292
7.6.1. Stochastic dynamics of zero-coupons . . . . .	292
7.6.2. The CIR process as rate dynamic . . . . .	295
7.7. Market evaluation of financial flows . . . . .	298
<b>BIBLIOGRAPHY</b> . . . . .	301
<b>INDEX</b> . . . . .	309
