

Table of Contents

Preface	xi
Chapter 1. Parametric Models	1
1.1. Introduction	1
1.2. Discrete linear models	5
1.2.1. The moving average (MA) model	9
1.2.2. The autoregressive (AR) model	11
1.3. Observations on stability, stationarity and invertibility	16
1.3.1. AR model case	17
1.3.2. ARMA model case	19
1.4. The AR model or the ARMA model?	20
1.5. Sinusoidal models	21
1.5.1. The relevance of the sinusoidal model.	21
1.5.2. Sinusoidal models.	23
1.6. State space representations.	27
1.6.1. Definitions	27
1.6.2. State space representations based on differential equation representation	28
1.6.3. Resolution of the state equations	29
1.6.4. State equations for a discrete-time system	30
1.6.5. Some properties of systems described in the state space	32
1.6.5.1. Introduction	32
1.6.5.2. Observability	32
1.6.5.3. Controllability.	33
1.6.5.4. Plurality of the state space representation of the system	33
1.6.6. Case 1: state space representation of AR processes	34
1.6.7. Case 2: state space representation of MA processes.	35
1.6.8. Case 3: state space representation of ARMA processes	36

1.6.9. Case 4: state space representation of a noisy process	39
1.6.9.1. An AR process disturbed by a white noise	39
1.6.9.2. AR process disturbed by colored noise itself modeled by another AR process.	40
1.6.9.3. AR process disturbed by colored noise itself modeled by a MA process	42
1.7. Conclusion	44
1.8. References	44
Chapter 2. Least Squares Estimation of Parameters of Linear Models	49
2.1. Introduction	49
2.2. Least squares estimation of AR parameters	49
2.2.1. Determination or estimation of parameters?	50
2.2.2. Recursive estimation of parameters	56
2.2.3. Implementation of the least squares algorithm	59
2.2.4. The least squares method with weighting factor	61
2.2.5. A recursive weighted least squares estimator.	63
2.2.6. Observations on some variants of the least squares method	63
2.2.6.1. The autocorrelation method.	65
2.2.6.2. Levinson's algorithm	67
2.2.6.3. The Durbin-Levinson algorithm	72
2.2.6.4. Lattice filters	75
2.2.6.5. The covariance method	77
2.2.6.6. Relation between the covariance method and the least squares method	78
2.2.6.7. Effect of a white additive noise on the estimation of AR parameters.	82
2.2.6.8. A method for alleviating the bias on the estimation of the AR parameters	85
2.2.7. Generalized least squares method	93
2.2.8. The extended least squares method	99
2.3. Selecting the order of the models	100
2.4. References	103
Chapter 3. Matched and Wiener Filters	105
3.1. Introduction	105
3.2. Matched filter	106
3.2.1. Introduction	106
3.2.2. Matched filter for the case of white noise.	107
3.2.3. Matched filter for the case of colored noise	112
3.2.3.1. Formulation of problem	112
3.2.3.2. Physically unrealizable matched filter	115

3.2.3.3. A matched filter solution using whitening techniques	116
3.3. The Wiener filter.	119
3.3.1. Introduction	119
3.3.2. Formulation of problem	120
3.3.3. The Wiener-Hopf equation	121
3.3.4. Error calculation in a continuous physically non-realizable Wiener filter	124
3.3.5. Physically realizable continuous Wiener filter. Rational spectra case .	127
3.3.6. Discrete-time Wiener filter	133
3.3.6.1. Finite impulse response (FIR) Wiener filter	134
3.3.6.2. Infinite impulse response (IIR) Wiener filter	138
3.3.7. Application of non-causal discrete Wiener filter to speech enhancement	139
3.3.7.1. Modified filter expression.	139
3.3.7.2. Experimental results	143
3.3.7.3. Enhancement using combination of AR model and non-causal Wiener filter	143
3.4. References	146
Chapter 4. Adaptive Filtering	149
4.1. Introduction	149
4.2. Recursive least squares algorithm.	151
4.2.1. Exact RLS method	151
4.2.2. Forgetting factor RLS method	155
4.3. The least mean squares algorithm.	156
4.4. Variants of the LMS algorithm	167
4.4.1. Normalized least mean squares (NLMS)	167
4.4.2. Affine projection algorithm (APA)	172
4.5. Summary of the properties of the different adaptive filters	178
4.6. Application: noise cancellation	179
4.7. References	182
Chapter 5. Kalman Filtering	185
5.1. Introduction	185
5.2. Derivation of the Kalman filter	186
5.2.1. Statement of problem.	186
5.2.2. Propagation step: relationship between $\hat{x}(k+1/k)$ and $\hat{x}(k/k)$; recurrence relationship between the error covariance matrices $P(k+1/k)$ and $P(k/k)$	187
5.2.3. Update step: relationship between $\hat{x}(k/k)$ and $\hat{x}(k/k-1)$; recursive relationship between $P(k/k)$ and $P(k/k-1)$	189

5.2.4. Expression of the Kalman filter gain	190
5.2.5. Implementation of the filter	194
5.2.6. The notion of innovation	196
5.2.7. Derivation of the Kalman filter for correlated processes	198
5.2.8. Relationship between the Kalman filter and the least squares method with forgetting factor	201
5.3. Application of the Kalman filter to parameter estimation	202
5.3.1. Estimation of the parameters of an AR model	202
5.3.2. Application to speech analysis	207
5.4. Nonlinear estimation	208
5.4.1. Model linearization: linearized Kalman filter	209
5.4.2. The extended Kalman filter (EKF)	212
5.4.3. Applications of the EKF	213
5.4.3.1. Parameter estimation of a noisy speech signal	214
5.4.3.2. Application to tracking formant trajectories of speech signals	218
5.5. Conclusion	220
5.6. References	221
Chapter 6. Application of the Kalman Filter to Signal Enhancement	223
6.1. Introduction	223
6.2. Enhancement of a speech signal disturbed by a white noise	224
6.2.1. State space representation of the noisy speech signal	224
6.2.2. Speech enhancement procedure	225
6.2.3. State of the art dedicated to the single-channel enhancement methods using Kalman filtering	228
6.2.4. Alternative methods based on projection between subspaces	233
6.2.4.1. Introduction	233
6.2.4.2. Preliminary observations	233
6.2.4.3. Relation between subspace-based identification methods and the Kalman algorithm	234
6.2.4.4. Signal prediction using the optimal Kalman filter	236
6.2.4.5. Kalman filtering and/or smoothing combined with subspace identification methods	237
6.2.4.6. Simulation results	238
6.2.5. Innovation-based approaches	240
6.2.5.1. Introduction	240
6.2.5.2. Kalman-filter based enhancement without direct estimation of variances Q and R	241
6.2.5.3. Kalman-filter based enhancement using a suboptimal gain	242
6.2.5.4. Alternative approach to Kalman-filter based enhancement, using the estimation of variances Q and R	244

6.3. Kalman filter-based enhancement of a signal disturbed by a colored noise.	247
6.4. Conclusion	251
6.5. References	251
Chapter 7. Estimation using the Instrumental Variable Technique	255
7.1. Introduction	255
7.2. Introduction to the instrumental variable technique	257
7.2.1. Principle	257
7.2.2. Review of existing instrumental variable methods for the estimation of AR parameters.	260
7.3. Kalman filtering and the instrumental variable method	261
7.3.1. Signal estimation using noisy observations.	262
7.3.2. Estimation of AR parameters using the filtered signal	264
7.3.3. Estimation of the variances of the driving process and the observation noise.	265
7.3.4. Concluding observations.	266
7.4. Case study	267
7.4.1. Preliminary observations	267
7.4.2. Comparative study. Case 1: white additive noise	271
7.5. Conclusion	281
7.6. References	281
Chapter 8. H_∞ Estimation: an Alternative to Kalman Filtering?	285
8.1. Introduction.	285
8.2. Introduction to H_∞ estimation	286
8.2.1. Definition of the H_∞ norm	287
8.2.2. H_∞ filtering	287
8.2.3. Riccati equation-based recursive solution of H_∞ filtering	291
8.2.4. Review of the use of H_∞ filtering in signal processing	295
8.3. Estimation of AR parameters using H_∞ filtering	296
8.3.1. H_∞ filtering for the estimation of AR parameters	296
8.3.2. Dual H_∞ estimation of the AR process and its parameters	299
8.4. Relevance of H_∞ filtering to speech enhancement	304
8.5. Conclusion	310
8.6. References	311
Chapter 9. Introduction to Particle Filtering	315
9.1. Monte Carlo methods	316
9.2. Sequential importance sampling filter	321

x	Modeling, Estimation and Optimal Filtering in Signal Processing	
9.3.	Review of existing particle filtering techniques	326
9.4.	References	333
	Appendix A. Karhunen Loeve Transform	335
	Appendix B. Subspace Decomposition for Spectral Analysis	341
	Appendix C. Subspace Decomposition Applied to Speech Enhancement	345
	Appendix D. From AR Parameters to Line Spectrum Pair	349
	Appendix E. Influence of an Additive White Noise on the Estimation of AR Parameters	355
	Appendix F. The Schur-Cohn Algorithm	361
	Appendix G. The Gradient Method	369
	Appendix H. An Alternative Way of Understanding Kalman Filtering	371
	Appendix I. Calculation of the Kalman Gain using the Mehra Approach	373
	Appendix J. Calculation of the Kalman Gain (the Carew and Belanger Method)	379
	Appendix K. The Unscented Kalman Filter (UKF)	385
	Index	391
