

## Table of Contents

<b>Preface . . . . .</b>	13
<b>Chapter 1. Introduction to Inverse Problems in Imaging and Vision . . . . .</b>	15
Ali MOHAMMAD-DJAFARI	
1.1. Inverse problems . . . . .	16
1.1.1. 1D signal case . . . . .	17
1.1.2. Convolution model for image restoration . . . . .	18
1.1.3. General linear model . . . . .	19
1.2. Specific vision problems . . . . .	21
1.2.1. Noise removal . . . . .	23
1.2.2. Segmentation . . . . .	23
1.2.3. Contour detection . . . . .	25
1.2.4. Restoration or reconstruction in vision . . . . .	26
1.3. Models for time-dependent quantities . . . . .	26
1.4. Inverse problems with multiple inputs and multiple outputs (MIMO) . .	27
1.4.1. MIMO deconvolution . . . . .	28
1.4.2. Super-resolution . . . . .	29
1.4.3. Source separation . . . . .	30
1.5. Non-linear inverse problems . . . . .	30
1.5.1. Microwave imaging . . . . .	31
1.6. 3D reconstructions . . . . .	33
1.6.1. Reconstruction of the surface of a 3D object from its radiographs	33
1.7. Inverse problems with multimodal observations . . . . .	33
1.7.1. Fusion of X-ray radiography and ultrasonic echography data . .	34
1.8. Classification of inversion methods: analytical or algebraic . . . . .	34
1.8.1. Analytical inversion methods . . . . .	36
1.8.2. Analytical inversion methods in a dual space . . . . .	39
1.8.3. Discretization into pixels or voxels, and algebraic inversion . .	40
1.9. Standard deterministic methods . . . . .	40

## 6 Inverse Problems in Vision

1.9.1. Matched filter or back-projection solution . . . . .	41
1.9.2. Inverse solution in the classical sense . . . . .	42
1.9.3. Minimum-norm solution . . . . .	42
1.9.4. Least-squares solution . . . . .	43
1.9.5. The regularized solution . . . . .	43
1.9.6. Finding an inverse operator . . . . .	43
1.10. Probabilistic methods . . . . .	44
1.10.1. Bayesian estimation approach . . . . .	45
1.11. Problems specific to vision . . . . .	50
1.12. Introduction to the various chapters of the book . . . . .	52
1.12.1. Noise removal and contour detection . . . . .	52
1.12.2. Blind image deconvolution . . . . .	52
1.12.3. Triplet Markov chains and image segmentation . . . . .	52
1.12.4. Detection and recognition of a collection of objects in a scene .	53
1.12.5. Apparent motion estimation and visual tracking . . . . .	53
1.12.6. Super-resolution . . . . .	53
1.12.7. Tomographic surface reconstruction . . . . .	53
1.12.8. Gauss-Markov-Potts prior for Bayesian inversion in microwave imaging . . . . .	54
1.12.9. 3D reconstruction from shadows . . . . .	54
1.12.10. Image separation . . . . .	54
1.12.11. Stereo reconstruction from satellite or aerial photography .	55
1.12.12. Fusion and multimodality . . . . .	55
1.13. Bibliography . . . . .	55
<b>Chapter 2. Noise Removal and Contour Detection</b> . . . . .	<b>59</b>
Pierre CHARBONNIER and Christophe COLLET	
2.1. Introduction . . . . .	61
2.1.1. Boolean line process models . . . . .	62
2.1.2. Half-quadratic regularization . . . . .	64
2.1.3. Comments . . . . .	66
2.1.4. Constraints on the contour variables . . . . .	68
2.1.5. Regularization of intensity and region segmentation . . . . .	72
2.2. Statistical segmentation of noisy images . . . . .	72
2.2.1. Noise models . . . . .	73
2.2.2. Multiplicative noise in sonar and radar imagery . . . . .	73
2.2.3. Independent Gaussian noise . . . . .	76
2.2.4. Correlated Gaussian noise . . . . .	77
2.2.5. Generalized Gaussian noise . . . . .	77
2.3. Multi-band multi-scale Markovian regularization . . . . .	79
2.3.1. Bayesian inference . . . . .	80
2.3.2. Cost function . . . . .	80
2.3.3. Hierarchical Markovian models . . . . .	81

2.3.4. Markovian quad-tree . . . . .	84
2.3.5. Missing or erroneous data . . . . .	87
2.4. Bibliography . . . . .	88
<b>Chapter 3. Blind Image Deconvolution</b> . . . . .	97
Laure BLANC-FÉRAUD, Laurent MUGNIER and André JALOBEANU	
3.1. Introduction . . . . .	97
3.2. The blind deconvolution problem . . . . .	98
3.2.1. Ill-posed problem (multiple solutions) . . . . .	100
3.2.2. Constraints and models for the point spread function . . . . .	101
3.3. Joint estimation of the PSF and the object . . . . .	103
3.3.1. Joint maximum likelihood . . . . .	103
3.3.2. Joint maximum <i>a posteriori</i> . . . . .	104
3.3.3. Total least squares . . . . .	106
3.4. Marginalized estimation of the impulse response . . . . .	107
3.4.1. Estimation using the expectation-maximization algorithm . . . . .	108
3.4.2. Algorithm example: BLINDE . . . . .	109
3.5. Various other approaches . . . . .	112
3.5.1. Estimation for specific objects or with strong constraints on the image . . . . .	112
3.5.2. Wavelet-domain estimation . . . . .	113
3.5.3. Separation of “zero sheets” . . . . .	113
3.5.4. ARMA modeling and identification . . . . .	113
3.5.5. Estimation by recursive filtering . . . . .	114
3.6. Multi-image methods and phase diversity . . . . .	114
3.7. Conclusion . . . . .	115
3.8. Bibliography . . . . .	116
<b>Chapter 4. Triplet Markov Chains and Image Segmentation</b> . . . . .	123
Wojciech PIECZYNSKI	
4.1. Introduction . . . . .	124
4.2. Pairwise Markov chains (PMCs) . . . . .	127
4.2.1. General model . . . . .	127
4.2.2. Stationary Gaussian PMCs . . . . .	129
4.3. Copulas in PMCs . . . . .	130
4.3.1. Copulas . . . . .	130
4.3.2. Copulas in PMCs . . . . .	132
4.4. Parameter estimation . . . . .	132
4.4.1. ICE in a parametric model . . . . .	133
4.4.2. ICE in a generalized mixture model with copulas . . . . .	135
4.5. Triplet Markov chains (TMCs) . . . . .	136
4.6. TMCs and non-stationarity . . . . .	139
4.7. Hidden Semi-Markov chains (HSMCs) and TMCs . . . . .	140

8 Inverse Problems in Vision

4.7.1. HSMCs as a special case of TMCs . . . . .	141
4.7.2. Extensions to HSMCs . . . . .	142
4.8. Auxiliary multivariate chains . . . . .	144
4.9. Conclusions and outlook . . . . .	148
4.10. Bibliography . . . . .	149
<b>Chapter 5. Detection and Recognition of a Collection of Objects in a Scene</b> . . . . .	155
Xavier DESCOMBES, Ian JERMYN and Josiane ZERUBIA	
5.1. Introduction . . . . .	155
5.2. Stochastic approaches . . . . .	156
5.2.1. Markov fields on graphs . . . . .	156
5.2.2. Marked point processes . . . . .	159
5.3. Variational approaches . . . . .	167
5.3.1. Active contours . . . . .	169
5.3.2. Methods with a reference shape . . . . .	172
5.3.3. Higher-order active contours . . . . .	174
5.3.4. Data term and experiments . . . . .	178
5.3.5. Future outlook . . . . .	184
5.4. Bibliography . . . . .	184
<b>Chapter 6. Apparent Motion Estimation and Visual Tracking</b> . . . . .	191
Etienne MÉMIN and Patrick PÉREZ	
6.1. Introduction: from motion estimation to visual tracking . . . . .	191
6.2. Instantaneous estimation of apparent motion . . . . .	193
6.2.1. Photometric invariants and regularization . . . . .	193
6.2.2. Parametric regularization . . . . .	196
6.2.3. Non-parametric regularization . . . . .	201
6.2.4. Multi-resolution and large displacements . . . . .	203
6.2.5. Robustification . . . . .	204
6.2.6. Motion-based segmentation . . . . .	209
6.2.7. Coupled estimation/segmentation: local-global segmentation . . . . .	215
6.2.8. Future directions . . . . .	217
6.3. Visual tracking . . . . .	219
6.3.1. Introduction . . . . .	219
6.3.2. Tracking through detection matching . . . . .	221
6.3.3. Deterministic tracking by sequential detection/segmentation . . . . .	223
6.3.4. Probabilistic tracking . . . . .	228
6.3.5. Visual tracking using particle filtering . . . . .	235
6.3.6. Open questions and future directions . . . . .	239
6.4. Conclusions . . . . .	240
6.5. Bibliography . . . . .	241

<b>Chapter 7. Super-resolution . . . . .</b>	251
Ali MOHAMMAD-DJAFARI and Fabrice HUMBLOT	
7.1. Introduction . . . . .	251
7.2. Modeling the direct problem . . . . .	252
7.3. Classical SR methods . . . . .	257
7.4. SR inversion methods . . . . .	261
7.4.1. Methods based on an optimization criterion . . . . .	261
7.4.2. Joint estimation of the alignment, point spread function and HR image parameters . . . . .	264
7.5. Methods based on a Bayesian approach . . . . .	265
7.5.1. <i>A priori</i> Gauss-Markov-Potts models . . . . .	265
7.5.2. Methods of Bayesian estimation using Gauss-Markov-Potts models . . . . .	269
7.5.3. Novel extensions . . . . .	270
7.6. Simulation results . . . . .	271
7.7. Conclusion . . . . .	272
7.8. Bibliography . . . . .	274
<b>Chapter 8. Surface Reconstruction from Tomography Data . . . . .</b>	277
Charles SOUSSEN and Ali MOHAMMAD-DJAFARI	
8.1. Introduction . . . . .	277
8.2. Reconstruction of localized objects . . . . .	280
8.2.1. Modeling of radiographic images . . . . .	280
8.2.2. Principles of surface reconstruction . . . . .	283
8.3. Use of deformable contours for 3D reconstruction . . . . .	284
8.3.1. Introduction . . . . .	284
8.3.2. Non-parametric contour models . . . . .	285
8.3.3. Simple parametric contour models . . . . .	287
8.3.4. More general contour models: concept of locality . . . . .	289
8.3.5. Indirect models . . . . .	292
8.4. Appropriate surface models and algorithmic considerations . . . . .	293
8.4.1. Choice of model . . . . .	293
8.4.2. Estimation of shape parameters . . . . .	293
8.4.3. Calculating the projections of a contour . . . . .	294
8.4.4. Differentiation of contour projections . . . . .	296
8.4.5. Contour deformation . . . . .	297
8.4.6. Conclusion . . . . .	297
8.5. Reconstruction of a polyhedral active contour . . . . .	298
8.5.1. Polyhedron model . . . . .	298
8.5.2. Parameterization of the contour using its vertex locations . . . . .	300
8.5.3. Maximum <i>a posteriori</i> estimation of the vertices . . . . .	300
8.5.4. Numerical simulations . . . . .	301

10 Inverse Problems in Vision

8.6. Conclusion . . . . .	303
8.7. Bibliography . . . . .	305

**Chapter 9. Gauss-Markov-Potts Prior for Bayesian Inversion in  
Microwave Imaging** . . . . . 309  
Olivier FÉRON, Bernard DUCHÈNE and Ali MOHAMMAD-DJAFARI

9.1. Introduction . . . . .	310
9.2. Experimental configuration and modeling of the direct problem . . . . .	311
9.2.1. The experimental configuration . . . . .	312
9.2.2. The forward model . . . . .	314
9.3. Inversion in the linear case . . . . .	315
9.3.1. Diffraction tomography . . . . .	315
9.3.2. The Bayesian approach . . . . .	319
9.3.3. Results . . . . .	325
9.4. Inversion in the non-linear case . . . . .	325
9.4.1. The discrete forward model . . . . .	325
9.4.2. The Bayesian approach . . . . .	327
9.4.3. Results . . . . .	331
9.5. Conclusion . . . . .	335
9.6. Bibliography . . . . .	336

**Chapter 10. Shape from Shading** . . . . . 339  
Jean-Denis DUROU

10.1. Introduction . . . . .	339
10.2. Modeling of shape from shading . . . . .	340
10.2.1. Optics of photography . . . . .	340
10.2.2. SFS models . . . . .	348
10.3. Resolution of shape from shading . . . . .	353
10.3.1. Well- and ill-posed inverse problems . . . . .	353
10.3.2. Solving non-differential SFS models . . . . .	357
10.3.3. Solving differential SFS models . . . . .	367
10.4. Conclusion . . . . .	371
10.5. Bibliography . . . . .	372

**Chapter 11. Image Separation** . . . . . 377  
Hichem SNOUSSI and Ali MOHAMMAD-DJAFARI

11.1. General introduction . . . . .	377
11.2. Blind image separation . . . . .	378
11.2.1. Source and noise model . . . . .	379
11.2.2. Aims . . . . .	383
11.3. Bayesian formulation . . . . .	384
11.3.1. <i>A posteriori</i> distribution . . . . .	384

11.3.2. <i>A priori</i> selection . . . . .	388
11.4. Stochastic algorithms . . . . .	390
11.4.1. Stochastic approximations to expectation-maximization . . . . .	391
11.4.2. Gibbs sampler . . . . .	392
11.4.3. Convergence testing . . . . .	395
11.5. Simulation results . . . . .	398
11.6. Conclusion . . . . .	401
11.6.1. Separation performance . . . . .	401
11.6.2. Simultaneous separation and segmentation . . . . .	405
11.6.3. Algorithmic considerations . . . . .	407
11.7. Appendix 1: <i>a posteriori</i> distributions . . . . .	407
11.8. Bibliography . . . . .	409
<b>Chapter 12. Stereo Reconstruction in Satellite and Aerial Imaging . . . . .</b>	<b>411</b>
Julie DELON and Andrés ALMANSA	
12.1. Introduction . . . . .	411
12.2. Principles of satellite stereovision . . . . .	412
12.2.1. Acquisition and calibration . . . . .	412
12.2.2. Measurement accuracy and $B/H$ ratio . . . . .	413
12.2.3. Deformation models . . . . .	414
12.3. Matching . . . . .	415
12.3.1. Data-fitting term . . . . .	416
12.4. Regularization . . . . .	421
12.4.1. Variational methods . . . . .	421
12.4.2. Special case of small $B/H$ . . . . .	422
12.4.3. Discrete optimization methods . . . . .	423
12.4.4. Affine or geometric methods . . . . .	424
12.5. Numerical considerations . . . . .	425
12.5.1. Outline of sampling theory . . . . .	426
12.5.2. Aliasing and matching . . . . .	428
12.5.3. Discretization and sampling of the matching cost function . . . . .	429
12.6. Conclusion . . . . .	432
12.7. Bibliography . . . . .	434
<b>Chapter 13. Fusion and Multi-modality . . . . .</b>	<b>437</b>
Christophe COLLET, Farid FLITTI, Stéphanie BRICQ and André JALOBEANU	
13.1. Fusion of optical multi-detector images without loss of information . .	437
13.1.1. Motivation and aims of image data fusion . . . . .	437
13.2. Fusion of multi-spectral images using hidden Markov trees . . . . .	438
13.2.1. Background for multi-spectral image fusion . . . . .	438
13.2.2. Fusion of gray-levels . . . . .	439
13.2.3. Copula theory . . . . .	443
13.2.4. Fusion of the final multi-scale maps, and reconstruction . . . . .	445

## 12 Inverse Problems in Vision

13.3. Segmentation of multimodal cerebral MRI using an <i>a priori</i> probabilistic map . . . . .	448
13.3.1. Introduction . . . . .	448
13.3.2. Multimodal hidden Markov chains . . . . .	448
13.3.3. Hilbert-Peano scan . . . . .	449
13.3.4. Markov chains . . . . .	449
13.3.5. Use of a probabilistic atlas as a complementary detector . . . . .	452
13.3.6. Contribution of multimodality . . . . .	455
13.4. Bibliography . . . . .	458
<b>List of Authors</b> . . . . .	461
<b>Index</b> . . . . .	463
