PREFACE	xiii
INTRODUCTION	xv
CHAPTER 1. SOME NOTES ON TWO CONTROVERSIES AROUND PLASTIC MATERIALS AND THEIR MEDIA COVERAGE	1
Laura MAXIM	
1.1. Introduction	1
1.2. Socio-political aspects of the two controversies in the scientific literature	1
1.3. Plastics in the French media: a small sample	5
1.3.1. The written press: endocrine disruption	6
1.3.2. Plastics in general	7
1.3.3. An analysis of two television documentaries	9
1.4. Conclusion	10
1.5. Appendix: equations of research to identify the “plastic” <i>corpus</i>	11
1.6. Bibliography	11
CHAPTER 2. PLASTIC WASTE AND THE ENVIRONMENT	13
Claude DUVAL	
2.1. Introduction: waste and the environment	13
2.2. The end of life of plastic parts	13
2.2.1. Reduction at source	13
2.2.2. Hierarchy of choice of valorization	15
2.2.3. Inventory	17
2.2.4. Specific difficulties with the physical recycling of plastics	18
2.2.5. The recycling chain	18
2.2.6. Physical recycling in solution	20

2.2.7. The use of recycled materials	21
2.2.8. Chemical recycling	21
2.2.9. Energetic valorization	22
2.2.10. Landfilling	23
2.3. Conclusion	24
2.4. Bibliography	24
CHAPTER 3. POLYMERS AND MARINE LITTER	27
François GALGANI	
3.1. Introduction	27
3.2. The cycle of litter at sea	28
3.2.1. Methods	28
3.2.2. Nature and quantity of litter reaching the sea	30
3.2.3. Sources	31
3.2.4. Fate and distribution	33
3.2.5. Oceanic convergence zone	34
3.3. The degradation of litter at sea	35
3.4. The effect of marine litter on the environment	37
3.5. Socio-economic aspects	40
3.5.1. Legal aspects (laws, conventions and directives)	40
3.5.2. Initiatives	43
3.5.3. Understanding and educating	45
3.6. Conclusion	45
3.7. Acknowledgment	46
3.8. Bibliography	46
Chapter 4. BETWEEN PREJUDICE AND REALITIES: HOW PLASTICS ARE ESSENTIAL FOR THE FUTURE	49
Michel LOUBRY	
4.1. From a gloomy picture to a solution for the future	49
4.1.1. An antiplastic crisis with often paradoxical consequences	49
4.1.2. The world as it is ... 2030	50
4.1.3. Vital qualities of plastics	52
4.2. Engineering polymers: what is wonderful, what is reassuring?	54
4.2.1. Plastics and their ignored positives effects on the preservation of the environment	54
4.2.2. Lightweight plastic, a quality that induces environmental performance	55
4.2.3. When plastics protect us	56
4.2.4. How plastics will prevail in the future energy solution?	56
4.2.5. Plastics at the heart of technological advancement	57

4.3. Plastic industries: progress to be made	58
4.3.1. Environmental issues, the European plastics industrials acts	58
4.3.2. From polluting plastics to non-disposable plastics	59
4.3.3. Recycling and valorization: the French cultural handicap	60
4.3.4. Bisphenol A or how to spread anxiety and misinformation	61
4.3.5. Bioplastics: from advertising to reality	62
4.4. Conclusion	63
4.5. Bibliography	63
 CHAPTER 5. LIFECYCLE ASSESSMENT AND GREEN CHEMISTRY: A LOOK AT INNOVATIVE TOOLS FOR SUSTAINABLE DEVELOPMENT	65
Sylvain CAILLOL	
5.1. Contextual element	65
5.1.1. The chemical industry mobilized to deal with global upsets.	65
5.1.2. New stresses being exerted on industrial chemistry.	67
5.2. Lifecycle assessment, as an eco-design tool: definitions and concepts	69
5.2.1. Eco-design: some definitions	69
5.2.2. Lifecycle assessment: definitions and concept.	70
5.2.3. Definition of the goals and scope of the lifecycle assessment	72
5.2.4. Lifecycle inventory analysis	73
5.2.5. Lifecycle impact assessment	74
5.2.6. Lifecycle interpretation	75
5.3. Green chemistry and eco-design	78
5.4. Limitations of the tool	79
5.4.1. Importance of the hypotheses.	81
5.4.2. Relevance of the inventory data	83
5.4.3. Influence of rules of allocation	84
5.4.4. The choice to recycle.	84
5.5. Conclusions: the future of eco-design	85
5.6. Bibliography	87
 CHAPTER 6. ARE BIOPLASTICS “GREEN” PLASTICS?	91
Olivier TALON	
6.1. Introduction	91
6.2. Bioplastics and LCA – some basic points	92
6.2.1. Overview of methods used and results obtained.	92
6.2.2. Limitations of the LCA methodology for the study of bioplastics	97
6.2.3. Advantage to an additional qualitative approach	98

6.3. Bioplastics in light of the 12 commandments of green chemistry	98
6.3.1. The twelve principles of green chemistry: a reference framework	98
6.3.2. Examples of use of this referential framework.	99
6.3.3. Practical case study: Bio-PET, decryption of a communication and avenues for improvement	104
6.4. Conclusion	105
6.5. Bibliography	105
6.5.1. Websites	107
CHAPTER 7. ENVIRONMENTAL CHARACTERIZATION OF MATERIALS FOR PRODUCT DESIGN.	109
Stéphane LE POCHAT and Arnaud ROQUESALANE	
7.1. Introduction	109
7.2. Environmental characterization for a drink container	110
7.2.1. Description of the case study	110
7.2.2. Characterization of materials by LCA.	110
7.3. Suggested indicators for the materials considered in this example	117
7.4. Conclusion	117
7.5. Bibliography	118
CHAPTER 8. CHOICE OF MATERIALS AND ENVIRONMENTAL IMPACT: CASE OF A WATER BOTTLE.	119
Rémi DETERRE	
8.1. Introduction	119
8.2. Functional analysis	120
8.2.1. Functional analysis of a bottle	120
8.3. Choice of materials	124
8.3.1. Expression of the specifications	124
8.3.2. List of properties relating to choice of material	129
8.4. Suitability for processing.	138
8.5. Integration of an environmental criterion	147
8.6. Conclusion	151
8.7. Appendix: modeling of cost index [ESA 03]	153
8.8. Bibliography	154

CHAPTER 9. FORMULATION AND DEVELOPMENT OF BIODEGRADABLE AND BIO-BASED MULTIPHASE MATERIALS: PLASTICIZED STARCH-BASED MATERIALS	155
Luc AVÉROUS	
9.1. Introduction	155
9.2. Biodegradable polymers	157
9.2.1. Concepts: biodegradability and renewal	157
9.2.2. Classifications of biodegradable polymers	160
9.2.3. The case of biodegradable polyesters	161
9.2.4. Agro-polymers	171
9.3. Plasticized starch	173
9.3.1. General points	173
9.3.2. Implementation and rheology of plasticized starch	174
9.3.3. Behavior of plasticized starch in the solid state	176
9.3.4. Issues and strategies	178
9.4. Biodegradable multiphase systems based on plasticized starch	180
9.4.1. Structures of plasticized starch-based multiphase systems	180
9.4.2. Plasticized starch-based blends	180
9.4.3. Plasticized starch-based multilayers	183
9.4.4. Plasticized starch-based composites	185
9.4.5. The case of plasticized starch-based nanobiocomposites	186
9.5. Acknowledgments	191
9.6. Bibliography	191
CHAPTER 10. DIFFERENT STRATEGIES FOR ECOPLASTICS DEVELOPMENT	201
Jean-François FELLER	
10.1. Introduction	201
10.2. General points about the lifecycle of plastics	201
10.3. Energy	202
10.4. Material	204
10.4.1. Minimizing waste	204
10.4.2. Favoring sustainable and renewable	205
10.5. The solution of ecoplastics	209
10.6. Scenario with compostable ecoplastic	210
10.6.1. Creation of a mixture of biodegradable polymers	210
10.6.2. Characterization of starch/PCL mixtures	218
10.7. Scenario with a recyclable ecoplastic	221
10.7.1. Sources of plastic waste	221
10.7.2. Concept of recyclability	223
10.7.3. Recyclability of bisphenol A poly(carbonate) waste	223
10.7.4. Bonding of rubber and poly(carbonate) waste	230

10.7.5. Upgrading of waste for a higher-level application	234
10.8. Conclusion	239
10.9. Acknowledgments	239
10.10. Bibliography	240
CHAPTER 11. THOUGHTS ABOUT PLASTIC RECYCLING. PRESENTATION OF A CONCRETE EXAMPLE: END-OF-LIFE POLYPROPYLENE	245
Frédéric VIOT	
11.1. Why do we use plastics	245
11.2. What are the regulations governing the “end of life” of plastics?	246
11.2.1. Compounding of collected plastic	249
11.2.2. Tools for working with recycled plastics	250
11.3. Armed with these observations, how did we proceed?	250
11.3.1. List of problems encountered	252
11.4. Conclusion	254
CHAPTER 12. RECYCLABLE AND BIO-BASED MATERIALS OPEN UP NEW PROSPECTS FOR POLYMERS: SCIENTIFIC AND SOCIAL ASPECTS	257
Valérie MASSARDIER	
12.1. Introduction	257
12.2. Resources	260
12.2.1. Mechanical recycling with energy recovery	260
12.2.2. Bio-based polymers	264
12.3. Social acceptability of recycled and bio-based polymers	266
12.4. Formulation examples of blends based on recycled PA and bio-based PA and their toxicological considerations	267
12.5. Conclusion	268
12.6. Bibliography	269
CHAPTER 13. FOOD PACKAGING: NEW DIRECTIONS FOR THE CONTROL OF ADDITIVE AND RESIDUE MIGRATION	273
Olivier VITRAC and Audrey GOUJON	
13.1. Introduction	273
13.2. Migration of packaging components	274
13.2.1. Evidence for migration	274
13.2.2. Food contamination pathways	277
13.2.3. Aggravating factors of contamination	279
13.3. Assessing and controlling migration	280
13.3.1. European regulation and its limits	280

13.3.2. Modeling migration	283
13.3.3. FMECA approaches to design safe packaging	288
13.4. Predicting and controlling migration at the molecular level	295
13.4.1. Packaging-food partition coefficients	295
13.4.2. Diffusion scaling laws	299
13.5. Conclusion	304
13.6. Bibliography	305
CHAPTER 14. BIODEGRADABILITY AND/OR COMPOSTABILITY?	309
Guy CÉSAR	
14.1. Biodegradation	309
14.1.1. Introduction	309
14.1.2. The definitions of biodegradation	310
14.1.3. Stages of biodegradation	310
14.1.4. How to measure biodegradation	314
14.1.5. Specific study of polyolefins added to pro-oxidants	329
14.1.6. Examples	331
14.2. Composting	332
14.2.1. Compostability	332
14.2.2. Norm NF EN 13432	333
14.3. Ten questions about biodegradability and compostability	335
14.3.1. Can certain materials (polyolefins with additives) be sometimes called “compostable”? Is this true?	335
14.3.2. Is it acceptable to say that “my product is biodegradable”?	335
14.3.3. Is it acceptable to say that “my product is compostable”?	335
14.3.4. Is there a norm for compostability under “domestic” conditions?	336
14.3.5. Are the materials said to be oxobiodegradable actually biodegradable?	336
14.3.6. My material is not packaging, can it still conform to NF EN 13432?	336
14.3.7. Can I say that my material conforms to NF EN 13432 and/or to NFU 52001 without consulting a certification body?	336
14.3.8. Can I “officially” declare that my material is biodegradable based on one or several (non-) respirometric and (non-) standardized tests of biodegradation?	336
14.3.9. Is a biodegradable material necessarily compostable?	337
14.3.10. Is a material, compostable under industrial conditions, biodegradable?	337
14.4. Conclusion	337
14.5. Bibliography	338

CHAPTER 15. THE REGULATION BY LAW OF NANOSCIENCES AND NANOTECHNOLOGIES	341
Eric JUET	
15.1. Introduction	341
15.2. Obstacles in the legal regulation of nanomaterials	342
15.2.1. Scientific and technical challenges	343
15.2.2. Legal issues	346
15.3. The legal regulation of nanomaterials	349
15.3.1. Legal regulation initiated by voluntary measures	349
15.3.2. Legal regulation prolonged by technical modifications to the REACH legislation	351
15.3.3. Legal regulation consolidated by non-technical amendments to sector legislation	353
15.4. Conclusion	355
15.5. Bibliography	356
CHAPTER 16. TEACHING SUSTAINABLE DEVELOPMENT	357
Serge WALTER	
16.1. Introduction	357
16.2. The foundations of teaching sustainable development	358
16.2.1. The need for the rigorous quantification of energy	358
16.2.2. The problem of flow management	359
16.3. Conclusion	360
