Preface	ix
Introduction	xi
Chapter 1. Financial Markets with Discrete Time	1
1.1. General description of a market model with discrete time	1
1.1.1. Description of asset prices as the stochastic processes with discrete time	1
1.1.2. Discounted prices	4
1.1.3. Description of investor's strategy: self-financing strategies	5
1.2. Arbitrage opportunities, martingale measures and martingale criterion of the absence of arbitrage	9
1.2.1. Arbitrage and other possibilities of market imbalance	9
1.2.2. Risk-neutral measure and arbitrage-free one-period markets: one-period version of the fundamental theory of asset pricing	15
1.2.3. Geometric interpretation of the one-period arbitrage-free market	22
1.2.4. The efficient market hypothesis and its connection to arbitrage opportunities	24
1.2.5. Arbitrage-free multi-period markets	30
1.3. Contingent claims: complete and incomplete markets	37
1.3.1. Contingent claims and derivative securities, examples	37
1.3.2. Discounted contingent claims, hedgeable contingent claims	41
1.3.3. Arbitrage-free prices of European contingent claims	44

1.3.4. Complete and incomplete markets with discrete time	49
1.4. The Cox–Ross–Rubinstein approach to option pricing	50
1.4.1. Description of binomial model	50
1.4.2. When is the binomial model arbitrage-free? How do we calculate the martingale measure?	51
1.4.3. Pricing and hedging on the binomial market	55
1.5. The sequence of the discrete-time markets as an intermediate step in the transition to a continuous time	59
1.5.1. Description of the sequence of financial markets	59
1.5.2. No-arbitrage and completeness of the market with discrete time, which is formed by independent random variables in the multiplicative scheme	62
1.6. American contingent claims	68
1.6.1. Definition and examples of American contingent claims . .	68
1.6.2. Snell envelope and its properties	69
1.6.3. Seller’s hedging of the American contingent claim	72
1.6.4. Optimal stopping time for the buyer of the American contingent claim	76
Chapter 2. Financial Markets with Continuous Time	83
2.1. Transition from discrete to continuous time	83
2.1.1. Prelimit sequence of the models with discrete time in the multiplicative scheme	83
2.1.2. Geometric Brownian motion	86
2.1.3. Functional limit theorem for the financial markets in the multiplicative scheme	87
2.2. Black–Scholes formula for the arbitrage-free price of the European option in the model with continuous time: Black–Scholes equation	93
2.2.1. Black–Scholes formula: the result of limit transition, option valuation and some versions	93
2.2.2. Behavior of the Black–Scholes price as the function of model parameters: Greeks	97
2.2.3. Black–Scholes equation as the result of the analysis of the change of an investor’s portfolio	102
2.3. Arbitrage theory for the financial markets with continuous time	105
2.3.1. The notion of self-financing strategy	105
2.3.2. Arbitrage and martingale measures	107
2.3.3. Hedging strategies	110
2.3.4. Complete markets	111

2.4. American contingent claims in continuous time	112
2.4.1. Valuation of American contingent claims	112
2.4.2. Free boundary problem	115
2.5. Exotic derivatives in the model with continuous time	117
2.5.1. Asian options: examples and application	118
2.5.2. Look-back options: examples and application	118
2.5.3. Pricing look-back options in the Black–Scholes model	119
2.5.4. Barrier options: examples and application	121
Appendices	123
Appendix A	125
Appendix B	165
Bibliography	171
Index	177
