Contents

Preface vii

Notations ix

Chapter 1. Overview of the Basics of Stochastic Analysis 1

1.1. Brownian motion 1
1.2. Stochastic integrals 6
1.3. Martingales, Itô processes and general Itô's formula 11
1.4. Stochastic differential equations 17
1.5. Change of probability: the Girsanov theorem 22

Chapter 2. The Black–Scholes Model 29

2.1. Introduction: what is an option? 29
2.2. Self-financing strategies 32
2.2.1. A portfolio and its trading strategy 32
2.2.2. Self-financing strategies 33
2.2.3. Motivation 34
2.2.4. Stock discount 35
2.3. Option pricing problem: the Black–Scholes model 40
2.4. The Black–Scholes formula 43
2.4.1. Option Greeks[7] 50
2.5. Risk-neutral probabilities: alternative derivation of the Black–Scholes formula 56

2.5.1. Risk-neutral probability 56
2.6. American options in the Black–Scholes model 65
2.7. Exotic options 66
2.7.1. Barrier options 67
2.7.2. Other exotic options 68
2.7.3. Barrier option pricing 69
2.7.4. Lookback option pricing 79

Chapter 3. Models of Interest Rates 83

3.1. Modeling principles 83
3.1.1. Classic models of interest rates 86
3.1.2. Partial differential equation for interest rates 87
3.2. The Vašíček model 89
3.3. The Cox–Ingersoll–Ross model 98
3.3.1. Moments and covariance of the CIR process 102
3.3.2. The value of zero-coupon bond in the CIR model 105
3.4. The Heath–Jarrow–Morton model 111
